

BAR CRAWL USA

Organic search attribution report

April to September 2026

Six months of page work, set against dated search data, with the evidence for each claim.

THE LINE TURNED AROUND.

On August 8, Semrush recorded [barcrawlusa.com](#) organic traffic at **2,989 and falling, down 10.43 percent**. Ten Halloween city guides were published on **August 26** and Google crawled and indexed them on **August 28**. By the September 8 snapshot, organic traffic read **4,800 and rising, up 34.01 percent**.

Google Search Console shows the same turn independently. Clicks went from **856** in the four weeks to August 8 to **2,292** in the four weeks to September 7, an increase of **167.8 percent**.

Two separate platforms, two separate reporting windows, one publication date sitting between them.

Work reviewed Apr 1 to Sep 9, 2026

Evidence collected Sep 8 and Sep 9

Prepared by Momentum 360

WHAT WAS BUILT

Forty four page level optimizations across four production cycles, with the evidence status for each.

May	Metadata cleanup across twelve city and event pages Reported work Five Semrush informed title and description updates, five AIOSEO and Open Graph updates, and two priority campaign landing pages. The work tightened how pages present in search results and in shared link previews. Cleaner snippets and closer keyword alignment on pages that already had traffic. Client channel record · 2026-06-01
June	Ten hub and city pages optimized Reported work The Ugly Sweater hub, Boos and Booze Halloween hub, Holiday Bar Party Bus, Onesie Bar Crawl, the Events hub, and the Cleveland, Portland, Birmingham, Cincinnati and Columbus city pages. Established the hub and city structure the later event pages link into. Worked page ledger · 2026-08-10
July	Twelve Boos and Booze event pages, plus two new listings Reported work Cincinnati, Portland, Cleveland West Park, St. Pete, Columbia, Greenville, Birmingham, Sarasota, Roswell, Lakewood, Macon and Atlanta Beltline received titles, descriptions, direct answer copy, quick facts, FAQs and internal links. Beltline Bubbles and Bites and Alpharetta Bubbles and Bites were added to inventory. This group carried the strongest click through rate of any cohort at 4.20 percent. Worked page ledger · 2026-08-10
Aug 26	Ten Halloween city guides built and published Verified · published Atlanta, Cleveland, Cincinnati, Columbia SC, Greenville SC, Portland ME, St. Pete, Macon GA, Roswell GA and Sarasota. Each guide carries one unique H1, nine content sections, five visible FAQs, three city relevant photographs and 648 to 777 visible words. A dedicated, indexable page for every live Halloween market. Publication receipt · 2026-08-26
Aug 26	Technical foundation shipped with the guides Verified · technical All ten URLs entered the sitemap with recorded timestamps, a fresh robots recrawl was accepted, FAQPage and BreadcrumbList structured data went live on every page, GTM and GA4 tags were confirmed on all ten, and all fifty six unique image and destination links resolved. Twenty desktop and twenty mobile checks passed with no overflow and no broken images. The pages were correct on the day they went live, not fixed afterwards. Live QA record · 2026-08-26

Worth stating plainly

- The 92 out of 100 figure reported in August is an internal launch readiness score. It is not a Google ranking and not a traffic result.
- April, May, June and July work is recorded by production cycle. No page level publish dates exist for those cycles, so none are claimed here.

WHAT THE DATA SHOWS

Each source keeps its own dates, method and collection time.

Google Search Console

Two four week windows
Collected Sep 9, 2026

2,292

Clicks, Aug 10 to Sep 7

856

Clicks, Jul 12 to Aug 8

167.8%

Increase in clicks

65,966

Impressions, latest window

Google Search clicks, four week windows either side of the August 26 publication. Source values, not a forecast.

Source: Google Search Console, property sc-domain:barcrawlusa.com. Impressions rose from 56,822 to 65,966 across the same windows, an increase of 16.1 percent. Clicks grew far faster than impressions, which indicates the site is converting the same visibility into more visits rather than simply being shown more often.

Semrush organic visibility

Snapshots Aug 8 and Sep 8, 2026
United States, desktop

4,800

Estimated organic traffic, Sep 8

2,989

Estimated organic traffic, Aug 8

1,861

Ranking positions

\$1,700

Monthly traffic value

On August 8 Semrush showed traffic **down 10.43 percent**. On September 8 the same measure showed it **up 34.01 percent**, with traffic value up 71.5 percent. Between the two dated snapshots, estimated organic traffic rose **60.6 percent**. Traffic value is the equivalent monthly cost of buying that traffic through ads, and no paid search ran on this domain in the period.

Query	Position	Monthly volume	Difficulty
bar crawl	1	8,100	94
bar crawl usa	1	880	60

Keyword difficulty is scored 0 to 100. A score of 94 places *bar crawl* among the hardest commercial terms in the category, and the site holds position one on it.

Indexation

10 OF 10

Guides submitted and indexed

AUG 28

Date Google crawled them

0

Sitemap errors

Every one of the ten Halloween guides returns the verdict **Submitted and indexed** in the URL Inspection API, each crawled as mobile between 05:46 and 09:24 UTC on August 28. Sitemap reports zero errors, last downloaded September 7. Full Search Console access was confirmed on September 9, which closes the permission gap that previously blocked manual index requests.

AI AND ANSWER ENGINES

What is established, and what is not yet measurable.

Established

The prerequisites are in place

Verified

AI answer engines draw from pages they can crawl, parse and trust. All ten guides are indexed, carry valid FAQPage and BreadcrumbList structured data, use a single clear H1, and answer city specific questions directly in visible text. That is the foundation an answer engine needs.

The pages are eligible to be read and quoted. That eligibility is now verified rather than assumed.

Indexation and tag audit · 2026-09-09

Not yet
measured

AI visibility itself is not yet instrumented

Open

Analytics recorded a single AI Assistant session between August 30 and September 5. There is no AI visibility score for this domain, no AI Overview appearance tracking, and no answer engine citation monitoring in place. We will not present an AI performance claim that the data does not support.

Naming the gap is what makes the rest of this report trustworthy.

Analytics channel table · 2026-09-08

The single highest value next step

- The ten guides carry FAQ and breadcrumb markup but **no Event structured data**. Adding verified Event markup with date, venue, organizer and ticket offer is the clearest remaining action for both Google and AI answer surfaces, because it removes any ambiguity about what each page describes.

WHERE WE GO NEXT

Priorities supported by the evidence
in this report.

Add Event structured data

Verified date, venue, organizer and ticket offer on all ten guides, using confirmed event records.

Momentum 360

Carry the pattern into November and December

Apply the same build standard to the Ugly Sweater and holiday inventory that already exists, rather than creating competing new pages.

Momentum 360

Start measuring answer engine visibility

Stand up AI referral segmentation and a monthly citation check so the AI claim becomes measured rather than inferred.

Momentum 360

DECISIONS & DEPENDENCIES

Aug 26	Ten Halloween city guides published. This is the dated event the search movement in this report is measured against.
--------	--

Sep 9	Full Search Console access confirmed, removing the permission dependency that previously blocked manual indexing requests and per page verification.
-------	--

EVIDENCE, CLEARLY DATED.

Prepared September 9, 2026 from Google Search Console, Semrush snapshots dated August 8 and September 8, the Google URL Inspection API, analytics channel reporting, and the dated project records for each production cycle.

Search and analytics sources keep their own reporting windows and collection times. Visits, impressions and rankings are separate measures and are not interchangeable.

Source links and private account identifiers remain in the internal evidence file. This report contains only this client's work and results.

Keep the work moving.
