

Bar Crawl USA

GA4 + Semrush Seasonal Performance Report

Prepared for Dillon Mohr / Momentum 360

Evidence date: August 9, 2026

GA4 through August 8, 2026 | Semrush U.S. desktop snapshot: August 8, 2026

Read-only review | Nothing delivered to the client

BOTTOM LINE

Bar Crawl USA has meaningful seasonal reach and a real organic-search asset, but the current analytics setup cannot prove ticket revenue or reliably distinguish a ticket purchase from a page load, form interaction, or outbound click.

The 2025 October-to-December season generated **237,385 GA4 sessions** on barcrawlusa.com. GA4 still reports **\$0 revenue**, contains no standard purchase event in the reviewed event table, and currently records a purchase-like page-load event for **4,147 of 5,777 users**. That event is far too broad to treat as verified ticket purchases.

Semrush estimates **2,989 monthly U.S. desktop organic visits**, **2,088 ranking keywords**, an **Authority Score of 30**, **389 referring domains**, and **1,584 backlinks**. Halloween already has 273 ranking positions. Ugly Sweater visibility is fragmented and the intended hub is being outranked by an internal Elementor URL and a legacy event page.

Current GA4 performance

barcrawlusa.com | July 12–August 8, 2026

Metric	Verified result
Sessions	6,764
Engaged sessions	2,237
Engagement rate	33.07%
Avg. engagement / session	16 seconds
Event count	33,049
Key events	319
Session key-event rate	2.75%
Reported revenue	\$0.00

Channel quality

Channel	Sessions	Share	Eng. rate	Avg.	Key events	Key rate
Paid Social	2,877	42.53%	20.89%	7s	43	0.80%
Direct	2,218	32.79%	30.39%	16s	86	1.76%
Organic Search	1,151	17.02%	58.47%	30s	151	8.51%
Organic Social	297	4.39%	47.47%	23s	19	3.37%
Referral	159	2.35%	71.70%	38s	7	4.40%

Decision implication: Paid Social supplies volume, but Organic Search supplies substantially stronger engagement and the highest material key-event rate. Protect and strengthen organic city/theme visibility, then use paid media around ticket-ready windows instead of treating paid reach as proof of sales.

Measurement-quality finding

Event	Count	Users	Interpretation
page_view	9,806	5,772	Standard page view
session_start	6,882	5,769	Standard session start
ads_conversion_Purchase_Page_load_barcode_1	5,744	4,147	Purchase-like naming; no revenue; implausibly broad user coverage
form_start	235	182	Form interaction, not a verified sale
click	183	154	Generic click; destination not proven here
form_submit	84	53	Form completion, not a verified sale

Only form_start and form_submit appear as key events in the current Reports snapshot, totaling 319. The reviewed event table contains no standard GA4 purchase event, and the Ecommerce card reports no item-purchase data.

Safe conclusion: GA4 supports traffic, engagement, landing-page, and directional action reporting today. It cannot support a verified ticket-sales, revenue, CPA, or ROAS claim until checkout, transaction ID, purchase value, currency, cross-domain/session preservation, and deduplication pass an end-to-end test.

Prior seasonal baseline

barcrawlusa.com | October 1–December 31, 2025

Metric	Verified result
Sessions	237,385
Engaged sessions	57,406
Engagement rate	24.18%
Avg. engagement / session	10 seconds
Event count	794,308
Key events	7,311
Session key-event rate	2.21%
Reported revenue	\$0.00

Seasonal channel mix

Channel	Sessions	Share	Eng. rate	Avg.	Key events	Key rate
Paid Social	140,395	59.14%	16.06%	6s	2,050	1.15%
Direct	51,562	21.72%	30.08%	14s	2,393	3.19%
Organic Search	20,509	8.64%	49.40%	28s	1,830	5.73%
Organic Social	7,807	3.29%	38.00%	16s	480	4.47%
Email	4,849	2.04%	43.06%	17s	112	1.88%
Referral	2,971	1.25%	50.45%	37s	133	3.43%

Paid Social drove scale, but Organic Search delivered only 8.64% of sessions and 25.03% of reported key events. Existing city/event pages are real organic acquisition assets; the conversion path and purchase measurement are the weak links.

Seasonal landing-page evidence

Landing page	Sessions	Avg	Key events	Key rate	Revenue
Ugly Sweater hub	10,588	18s	2,190	17.48%	\$0
Atlanta Beltline Halloween Oct. 31	10,505	7s	140	0.79%	\$0
Atlanta Beltline Ugly Sweater	10,433	9s	107	0.60%	\$0
Lakewood Ugly Sweater	8,530	7s	45	0.29%	\$0
Alpharetta Ugly Sweater	7,978	7s	63	0.41%	\$0
Atlanta Beltline Boos & Booze	7,535	19s	122	0.98%	\$0
Macon Boos & Booze	7,215	7s	73	0.44%	\$0
Cincinnati Ugly Sweater	6,957	5s	29	0.22%	\$0

The Ugly Sweater hub's 17.48% key-event rate is directional, not a purchase result. No purchase value or ecommerce record is present. Event-level pages generally show short engagement and sub-1% key-event rates, supporting clearer ticket CTAs, proof, inclusions, mobile sticky actions, and tested checkout handoffs.

Current pre-season demand

Halloween | July 12–August 8, 2026

- 317 sessions, 253 active users, 26-second average engagement
- 5 key events; 1.26% session key-event rate; \$0 reported revenue
- Leading current page: Atlanta Beltline Halloween with 65 sessions

Ugly Sweater | July 12–August 8, 2026

- 41 sessions, 38 active users, 10-second average engagement
- 0 key events and \$0 reported revenue

This supports a runway model: Halloween demand is beginning to surface, while December intent remains early. Build measurement and conversion modules before September rather than waiting for peak traffic.

Separate Ugly Sweater property and domain

GA4 | October 1–December 31, 2025

Metric	Verified result
Sessions	1,334
Engaged sessions	687
Engagement rate	51.50%
Avg. engagement / session	14 seconds
Key events	0
Reported revenue	\$0.00

Organic Search supplied 1,023 sessions, or 76.69% of the property total. The latest 28-day window contains only 8 sessions, 0 key events, and \$0 revenue.

Semrush | August 8, 2026

Metric	Result
Authority Score	3
Estimated U.S. organic traffic	0
U.S. organic keywords	59
Referring domains	166
Backlinks	462
AI visibility / mentions / cited pages	0 / 0 / 2

Decision implication: Do not split seasonal authority, media, or reporting between the main domain and this low-visibility microsite without a deliberate canonical-domain decision. The main domain owns the stronger authority, traffic, inventory, and Halloween visibility.

Semrush organic-search baseline

barcrawlusa.com | U.S. desktop | August 8, 2026

Metric	Semrush result
Authority Score	30
Estimated organic traffic	2,989; down 10.43%
Organic keywords	2,088; down 0.52%
Traffic cost	\$894; down 1.43%
Branded traffic	598
Non-branded traffic	~2,400; down 12.71%
Referring domains	389
Backlinks	1,584
Paid traffic / keywords	0 / 0

Keyword intent

Intent	Keywords	Estimated traffic
Informational	~1,600	~1,800
Navigational	105	611
Commercial	410	486
Transactional	92	151

The site has strong discovery visibility but a comparatively small transactional footprint. Preserve informational reach while making each event URL unmistakably transactional through date, city, inclusions, proof, ticket CTA, and reliable purchase measurement.

Halloween search opportunity

Semrush reports **273 ranking positions** containing Halloween.

Query	Position	U.S. volume	Ranking destination
halloween bar crawl	9	2,900	Halloween hub
bar crawl halloween	4	1,300	Homepage / hub variants
halloween pub crawl	6	720	Halloween hub
cleveland halloween bar crawl	2	110	Cleveland event page
atlanta bar crawl halloween	3	140	Atlanta event page
lakewood halloween bar crawl	1	40	Lakewood event page
boos fest halloween bar crawl	3	140	Cincinnati event page
portland halloween bar crawl	9	90	Portland event page

Existing rankings are fragmented across multiple theme hubs, current/legacy event URLs, and the homepage. Protect ranking URLs, select one canonical Halloween hub, and strengthen internal links to the 12 approved 2026 event pages.

Ugly Sweater search gap

Semrush reports only **15 ranking positions** containing Ugly Sweater on the main domain.

Query	Position	U.S. volume	Ranking destination
ugly sweater bar crawl	3	210	/elementor-4527/
ugly sweater bar	2	110	Legacy Atlanta event
ugly sweater pub crawl	10	170	Legacy Sarasota event
ugly sweater bar crawl	31	210	Intended Ugly Sweater hub

The generic query is being captured by an internal Elementor slug instead of the intended public hub. Preserve any equity, move the winning intent to the approved hub, and establish the 12 current December pages as the city-level destination set.

What this changes in the revised plan

- Keep the two-sprint model. The traffic and query evidence validates focused Halloween and Ugly Sweater sprints.
- Make tracking repair the first dependency. Do not use the custom purchase-page-load event as a purchase conversion.
- Use Organic Search as the quality benchmark. Its engagement and key-event rates materially exceed Paid Social.
- Use Paid Social for controlled reach, not proof. Prior-season Paid Social supplied 59.14% of sessions but only a 16.06% engagement rate and 1.15% key-event rate.
- Prioritize the Halloween hub and proven city pages. Protect existing rank leaders before changing URLs.
- Repair Ugly Sweater architecture before November. The wrong URL is winning the generic query.
- Keep revenue claims gated until purchase and value pass an end-to-end test.

Recommended call position

The website and search footprint can generate real seasonal demand. The strongest evidence is the 237,385-session prior season, 20,509 organic sessions during that period, the current 2,088-keyword footprint, and 273 Halloween ranking positions. The immediate business problem is not a lack of reach. It is that the present tracking cannot connect reach to verified ticket revenue by city and channel.

Present the seasonal scope as a bounded revenue-measurement and conversion program:

- Activate the 24 approved event pages and two hubs.
- Preserve ranking URLs while repairing genuine duplicates and the Ugly Sweater hub conflict.
- Instrument outbound ticket clicks, checkout starts, and verified purchases separately.
- Launch city/date campaigns only after ticket links, dates, locations, budgets, and conversion tests pass.
- Report each city as verified traffic, qualified ticket action, verified purchase, or unavailable.

Approval and access gates

- Exact ticket platform and destination URL for every event
- Permission and access to test the checkout path
- GA4/GTM and Google Ads conversion definitions
- Cross-domain tracking and transaction-value support
- Event date corrections and source-of-truth confirmation
- Google Ads budget and market priorities
- Media reuse rights and lifecycle platform access
- Canonical decision for barcrawlusa.com versus ugllysweaterbarcrawls.com

Evidence limitations

- GA4 key events are not assumed to be purchases.
- GA4 revenue and ecommerce data are unavailable in the reviewed reports.
- Semrush traffic is a modeled estimate, not first-party session data.
- No ticket-platform transaction export was available.

- No Google Ads cost/conversion export was included; CPA and ROAS are unavailable.
- Current GA4 data was complete through August 8, 2026.
