

BigOrange.Marketing

A Content & Inbound Marketing Agency

Looks simple. *Built deep.*

You already rank. The system that got you there was never written down. We wrote it down, applied it to all 370 live URLs, and built the first pages with it.

[Start the walkthrough →](#)

Private leadership review · Thursday, September 3, 2026 · nothing in this deck is published

REPLAY

THE WHOLE ENGAGEMENT IN ONE LINE

One reader job per URL, answered in blocks a machine can lift, published only after a human says yes.

370

live URLs inventoried and scored

live-site-health.md · 2026-09-01

17

builder terms ranking on one hub — 13 of them in positions 1–3

Moz snapshot · 2026-08-14 · pending re-export

9

WordPress drafts staged, private, ready to review

IDs 5546 · 5585 · 5550 · 5552 · 5619–5627

0

pages published, redirected or changed on the live site

Public page 1381 untouched

Forty minutes: twenty on what exists, ten on what it means, ten on the decisions only you can make. Every figure on these slides traces to a file in the package sent September 2 — the map is **evidence-index.md**.

An approved pilot, a mature site, and no shared definition of “done”.

What was agreed

- Jul 27** Margee approves the pillar project — “proceed with the approved project building the pillar into our WordPress website.”
- Jul 27** **Evolve the existing builder page** rather than build a new URL, to preserve the authority it already holds.
- Jul 29** Paula: Semrush access is not possible under BigOrange’s licence rules. **Moz** becomes the rank source.
- Aug 17** Emelia sends the Moz export — rankings by engine variant, through **2026-08-14**.
- Aug 28** Janice SME interview recorded. Permission coding still open on most of it.

The commercial frame

The pilot was approved as a fixed hour cap across two milestones — discovery and strategy, then build. That cap has not changed.

The five new blogs, the branded PDF set and this walkthrough sit **outside** that cap and carry no additional charge.

Invoice recipient, billing details and due date remain unconfirmed — one of today’s asks.

The one thing that never happened

No deliverable has had written client sign-off yet. Every inbound message since July has been logistics — access, scheduling, the Moz file.

That is what today is for.

370 published URLs. Five defects doing quiet damage.

The five highest-leverage defects

DEFECT	WHERE	WHY IT COSTS YOU
“Stategic” typo	homepage	Sits in the meta description, Open Graph <i>and</i> the Yoast JSON-LD — the three surfaces search and answer engines read first. This is the page that owns your two Cincinnati terms.
Four H1 tags	/ai-search-optimization-services/	No single primary topic for an extractor to latch onto — on the page that sells AI search optimisation.
index, nofollow	/ai-search-optimization-services/	Indexed, but every internal link out of it is discounted. Isolated from the MSP, builder and StoryBrand hubs. Owns zero tracked keywords.
Sitemap drift	21 pages	Indexed campaign landers that are also nofollow and absent from the sitemap. The link graph and the sitemap tell two different stories.
Missing alt text	8 of 50 homepage images	Accessibility and image search, on your highest-traffic page.

evidence/live-site-health.md · playbook/SITEWIDE-HEALTH-AND-RANKING.md — public HTML and REST, 2026-09-01T23:13:52Z. Origin recovered after the August 31 HTTP 520.

WHERE BIGORANGE WAS • THE UNCOMFORTABLE NUMBER

Your strongest commercial URL is also your slowest.

Lighthouse -- /marketing-agency-for-builders/ (page 1381)

METRIC	MOBILE	DESKTOP
Performance	32	75
Largest Contentful Paint	36.1 s	2.7 s
Total Blocking Time	1,110 ms	20 ms
Accessibility	86	86
Best practices	54	54
SEO	92	92

lighthouse-mobile-2026-08-20.json / -desktop-, fetched 2026-08-20T18:19Z, simulated throttling. Directional lab evidence, not field Core Web Vitals. Suspects: Elementor widget CSS on a Beaver Builder page, render-blocking assets, ~703 KiB unused JavaScript, unsized images.

Read that next to this

That same URL holds 17 of your 21 tracked builder keywords, and 13 of them sit in positions 1–3.

A 36-second mobile LCP on the single most valuable commercial page you own is not cosmetic. It is the highest-leverage fix on the list.

The starting line, for honesty

Google Search Console, July 2026 web search: 389 clicks, 210K impressions.

Reported 2026-08-04. This predates almost all of the work in this deck. It is a **baseline**, not a result — and it is the only third-party performance figure in the package.

Authority hub

One commercial URL per vertical, updated in place — never a competing second pillar.

Content engine

One SME interview → hub update, articles, FAQs, checklist, emails. Permission-coded throughout.

Nine reusable blocks

Answer, definition, decision table, FAQ, entity, sources, how-to, cluster links, schema.

AEO and GEO structure

Visible FAQs matched word-for-word to FAQPage JSON-LD. No schema without a visible answer.

THE STRUCTURE UNDERNEATH

Cinematic Authority

Premium editorial storytelling, architectural imagery, layered proof, one clear consultation path.

PRIVATE PREVIEW

bigorange.marketing/?page_id=5546&preview=true

- One visible H1
- Three working consultation CTAs
- FAQ interaction verified

Orange Press

Bolder BigOrange energy, press-inspired layouts, interactive content moments, the resolved particle logo.

PRIVATE PREVIEW

bigorange.marketing/?page_id=5585&preview=true

- Mobile nav, connected-system slider and industry slider verified
- Keyboard focus and reduced-motion behaviour retained
- No error-level console messages

Nine drafts. Every one private. Your live page never moved.

WP ID	WHAT IT IS	STATE
1381	/marketing-agency-for-builders/ — the live public hub	• UNTOUCHED
5546	Cinematic Authority — pillar direction A	• PRIVATE DRAFT
5585	Orange Press — pillar direction B	• PRIVATE DRAFT
5550	What a Custom Home Builder Website Must Include	• BLOCKED
5552	Five Articles Every Custom Home Builder Blog Needs	• PRIVATE DRAFT
5619-27	The five new growth blogs — 6,093 words	• PRIVATE DRAFT

Beaver Builder is the primary builder (fl-builder). Elementor One is still installed and its residual CSS is a live performance suspect on builder pages. A rollback snapshot of 1381 is staged as draft 5545.

Verified 2026-08-24 on the live private previews

- Inspected at
- 390, 768, 1024 and 1440 px — no horizontal overflow at any width
- One visible H1 each · no broken images · three working CTAs each
- Keyboard focus and reduced-motion behaviour retained
- No error-level console messages · design detector clean

375×812 captures — 5546 left, 5585 right. The editorial builder imagery is art direction for review, not BigOrange client work or performance proof; replace with approved project photography before publication.

A hub is not a page. It is a rule about who owns which question.

The architecture, cloned per vertical

Industry hub – one commercial URL, updated in place

- └ Supporting posts – definitions, checklists, examples
- └ Topic pages – visibility, website, local, lead-gen
- └ FAQ companion inside the hub, never a second FAQ URL
- └ Links: hub ↔ cluster ↔ book-appointment

Six rules travel with it. A keyword variation is not a page. Commercial queries sit on the hub; definitions sit on supporting URLs. Proof pages are not second hubs. Unranked high-volume terms get an owner, not a post-mortem. Generic head terms stay off the must-own list. Undefined service lines stay blocked.

Quality scorecard: every asset is scored 0–2 on ten criteria — direct answer, original expertise, source quality, audience specificity, internal-link value, scanability, accessibility, conversion clarity, fact-check completion, human approval. **Nothing publishes below 17/20** without a documented exception.

human review gates, each with a named
owner
ai-assisted-editorial-workflow.md

Two lanes, one system.

Lane A -- finish the builder hub

21

tracked

17

ranked

13

in positions 1–3

Every ranked builder term in the snapshot sits on **one URL** — /marketing-agency-for-builders/. Including *agency for home builders*, *home builder marketing agency* and *marketing agency for home builders*, all at position 1.

Four builder terms are unranked. That is unfinished hub work, not evidence something failed.

Lane B -- apply the same contract to what already ranks

150

tracked

61

ranked

27

distinct URLs

MSP (80 tracked terms), StoryBrand (26), manufacturing (3), landscaping (1), Cincinnati (4). Fourteen to protect, twenty-seven to improve, twenty in the 11–20 opportunity band.

The answer is not more builder articles. It is the same block contract, page by page, on pages that already earned their position.

emelia-moz-analysis.md — from 27,802 historical export rows, the 177 rows dated 2026-08-14 collapse to 171 unique keywords across 28 ranking URLs. **These are an August 14 snapshot, not live current ranks — treat every ranking figure in this deck as pending re-export.** Moz is the only rank source; Semrush validation was not available.

Eight families where two of your pages compete for the same reader.

FAMILY	TERMS / URLS	THE CALL
storybrand-website	10 / 5	Five owners is fine <i>only if</i> each H1 states the modifier
mzp-marketing-agency	6 / 2	Engine split — comparison page ranks mobile, hub ranks desktop
storybrand-examples	6 / 2	Hero page owns website examples; BrandScript terms move off it
storybrand-brandscript	5 / 3	BrandScript URL owns the examples, not the hero page
storybrand-certified-guide	4 / 3	Desktop ranks the cost page, mobile ranks the free page
cincinnati-agency	3 / 2	Homepage owns city terms; hub keeps builder+Cincinnati only
it-marketing	3 / 2	Definition page owns “it marketing”; content page owns types
mzp-website	3 / 2	Examples page owns “mzp website”; lead-gen keeps StoryBrand terms

And one slug collision

/home-builder-marketing-agency/ is a **post** — a case study — with a slug that reads as a second agency page beside /marketing-agency-for-builders/. Retitle toward the case, or redirect.

Eight builder satellites

Eight live builder URLs own **zero** tracked keywords in the snapshot. Re-job them as proof, case or archive. Do not let them accumulate hub terms.

Fifteen unranked terms with real volume

Including *managed services provider marketing* (vol 501–850) and *mzp website* (201–500). Each gets an existing owner — not a new thin page.

The same method, packaged as something you can sell.

Export in → page map out

A client hands you their Moz or Semrush export. The script joins it to their WordPress REST and sitemap and returns the same columns every time: one row per keyword, one owned URL per reader job, a bucket, a health flag, a priority.

The contract does not change by vertical. Copy, SME, imagery and hub URL do. **Eleven page templates** are already named, so a marketer can be told which one a URL is — and what it therefore owes.

370

URLs scored

39

deep write-ups

30

health flags

8

P0 items

The honest sales line: the demonstration is **the method and the artifacts** — not a promised rank, traffic number, lead count or AI citation. When a prospect asks you to guarantee page one, this system is the reason you can say no and still win the room.

ALL-PAGES LEDGER · 370 ROWS · ILLUSTRATION

URL	KWS	BEST	P
/marketing-agency-for-builders/	17	1	P0
/	2	9	P0
/msp-it-services-marketing-agency/	6	3	P0
/who-is-the-hero-of-your-website.../	8	1	P0

4 / 5

target terms unranked in the snapshot
pending re-export

Each article requires factual review, approved imagery, final link and metadata review, rendered WordPress QA and a named release owner before it goes anywhere. This work sits outside the approved pilot cap at no additional charge.

What is verified, and what is still a promise.

Verified

- Public site inventory — 370 URLs, sitemap, robots, plugin stack. Fetched 2026-09-01.
- Health defects — typo, four H1s, nofollow, sitemap gaps, alt text. Read from rendered HTML and the REST API.
- Draft QA on 5546 and 5585 — four breakpoints, H1 count, CTAs, keyboard, console. 2026-08-24.
- Lighthouse baseline on 1381 — mobile 32, LCP 36.1 s. Lab run 2026-08-20.
- Five-blog QA — 6,093 words, 25 FAQs, zero errors.
- Moz export provenance — file hash and row count reconciled to Emelia's August 17 email.

Pending — labelled, not hidden

- Every ranking figure is an August 14 snapshot.
- Not live ranks. Nothing here claims movement since.
- No Semrush validation.
- Licence rules blocked access; Moz is the single rank source.
- Private drafts not re-read since August 31.
- The HTTP 520 made the readback stale; the passkey gate is human-only.
- Her interview language, and the Homearama example, stay behind permission review — most of the transcript is not cleared for quotation.
- Possible 55% is blocked.
- The markdown answers “why leads are thin”; the WordPress draft answers “what a site must include”. Two reader jobs, one post ID. Someone has to choose.
- Conversion reporting is unvalidated
- until the analytics and CRM chain is confirmed end to end.

Ninety days of controllable work.

DAYS 1-14 · HEALTH AND PROTECT

- Authenticated readback of drafts 5546, 5585, 5550, 5552
- Fix
- Strategic** in meta, OG and schema; rewrite the description; add the missing alt text
- AI page: one H1, decide index+follow vs noindex, strip the “outrank competitors” promise
- Classify the 15 nofollow pages and 21 sitemap gaps into owner, campaign-noindex or confirmation-noindex
- Protect refresh on five slipping position-1-3 URLs

DAYS 15-45 · IMPROVE AND COLLAPSE

- Resolve the two engine splits — one title, one H1, one canonical per query
- Move BrandScript terms onto the BrandScript URL
- Apply the block contract to the top ownership URLs
- Reconcile post 5550 before any supporting article publishes
- Begin mobile performance work on live 1381 — staging confirmation run required

DAYS 46-90 · FILL THE GAPS

- Publish the builder supporting path — the five new blogs; hub stays the commercial owner
- Write owners for the high-volume unranked MSP and manufacturing terms
- Re-job the eight builder satellites as proof or archive
- Pick one landscaping hub slug
-

Re-export Moz and compare to August 14.

Do not narrate movement from memory.

Dates are a work order, not predicted ranking dates. Janice was explicit that ninety days is not much time and six months is more realistic for a program to get rolling. Publication, redirects on live commercial URLs, spend and invoicing each stay a separate approval.

Three in the room. Four you can send back in writing.

DECIDE TODAY · 1

Which pillar direction?

Cinematic Authority (5546), Orange Press (5585), or a bounded combination. Nothing goes to staging until this is chosen.

DECIDE TODAY · 2

Who is the factual reviewer?

Name the person and the date. Janice is the subject-matter source but is not on this invite — so her review needs scheduling, or a different named reviewer.

DECIDE TODAY · 3

Where does the first repair sprint go?

My recommendation: the **homepage typo** and the **AI page robots** first — an hour of work on the two surfaces that are visibly wrong — then mobile performance on 1381.

4 · Image briefs

Approve the briefs or supply approved project photography. Current imagery is art direction, not client proof.

5 · First two to release

Which two of the five blogs go first, after QA.

6 · Measurement chain

Confirm how a web enquiry becomes a CRM record, so “qualified lead” means one thing.

7 · Phase 2 and invoicing

Is social, downloadables and webinar a separate scope? And who receives the invoice, on what terms?

Everything in this package is built, QA'd and staged. **Not one item is waiting on more work.**
Every one is waiting on a decision.
