

CONNECT. GROW. FIGHT TOGETHER.

Purple direction & next milestone plan.

A focused companion document for confirming Bridge’s likely purple design direction and moving Dillon’s six-milestone execution lane into the next approved product and frontend steps.

Prepared

July 28, 2026

Primary working direction

Deep purple · black · white

Immediate focus

Design approval → vertical slice

Move forward with purple as the primary design direction.

The strongest working choice is the official deep-purple system supplied in Tori's source package. It aligns with Dillon's current read of Tori's preference, creates a confident technology identity, and already has a tangible Bridge product expression ready for review.

Why this direction fits

- The official Bridge guide names deep purple as the signature accent.
- The arch logo is already designed to lead in purple.
- Black, white, and dark gray give the product a premium, focused base.
- Purple creates strong continuity across community, business, creative, and insight experiences.
- The connected-suite prototype proves the system across desktop and mobile interfaces.

What the next review should confirm

- Purple is the selected Bridge product direction.
- The official arch mark is the primary logo.
- Poppins, Montserrat, and Inter remain the type system.
- The visual personality is bold, modern, clean, connected, and industry focused.
- One approved purple system becomes the reference for future screens and components.

			
Deep Purple #4B0082 · Signature	Black #000000 · Foundation	White #FFFFFF · Clarity	Dark Gray #1A1A1A · Depth

Decision requested

Confirm the purple direction during the next Tori review, then treat that approved system as the visual source for Milestones 2 through 6.

Carry the brand into a focused, reusable interface system.

The visual direction should feel unmistakably Bridge at every scale: strong contrast, purposeful purple, clear hierarchy, real industry context, and a shared component language.

Typography

Poppins for bold, confident headlines.

Montserrat for strong subheads, labels, and controls.

Inter for clear body copy and dense product information.

Interface character

- Dark foundations
- Purposeful purple actions
- Bright, readable content
- Clean cards and navigation
- Simple status language

Imagery direction

- Authentic industry scenes
- People and connection
- Regional opportunity
- Premium product detail
- Subtle purple lighting

Design-system handoff

The approved direction should be translated into tokens, responsive components, interaction states, screen templates, content patterns, and a short usage guide that Claude Code and Codex can apply consistently during implementation.

Where the work stands and where it goes next.

The discovery, prototype, brand, and handoff work already completed gives Bridge a strong foundation. The immediate transition is to close the Milestone 2 design decision and begin the Milestone 3 frontend foundation.

M1	Discovery, requirements, and architecture Product framing, roles, application maps, backlog foundation, source package, prototype coverage, and team responsibilities are assembled.	FOUNDATION ASSEMBLED
M2	Product definition and UX system Confirm the purple direction, MVP boundary, priority roles, user journeys, screen inventory, and acceptance criteria.	DECISION FOCUS
M3	Frontend foundation and AI-assisted workflow Establish production tokens, components, routes, responsive behavior, mock contracts, and the first approved vertical slice.	NEXT EXECUTION
M4	Core MVP frontend build Build role-aware onboarding, verification, discovery, profiles, structured contact, dashboard, notifications, and administration.	BUILD PHASE
M5	Integration, QA, and acceptance readiness Connect approved services, verify primary journeys, run responsive and accessibility checks, and prepare the client demo path.	INTEGRATION PHASE
M6	Launch readiness, documentation, and handoff Complete release checks, user-flow walkthroughs, product documentation, handoff materials, and the next product backlog.	LAUNCH PHASE

Recommended milestone transition

Use the next Bridge review to complete the Milestone 2 approval record. The team can then enter Milestone 3 with one product direction, one visual system, and one prioritized vertical slice.

Close the decisions that unlock the frontend foundation.

The next review can convert the existing research and prototypes into one approved product package.

01

Confirm the purple direction

Approve the official deep-purple, black, white, and dark-gray system with the Bridge arch mark and the Poppins, Montserrat, and Inter type hierarchy.

02

Confirm the first MVP boundary

Select the capabilities that create the first useful Bridge experience and place broader Community, Studio, Business, and Signal concepts into their intended product phases.

03

Confirm the role system

Approve the initial roles, their permissions, profile visibility, verification path, dashboard experience, and administration responsibilities.

04

Rank the priority journeys

Choose the one or two highest-value journeys for each launch role and identify the first successful connection Bridge should deliver.

05

Approve the screen inventory

Confirm the application shell, onboarding, verification, directory, profiles, structured contact, dashboard, notifications, and administration surfaces.

06

Approve acceptance criteria and owners

Record the expected outcome, responsible owner, review evidence, and sign-off path for each prioritized journey.

Milestone 2 output

Approved purple direction, MVP inclusion map, role matrix, journey map, screen inventory, prioritized backlog, and decision record.

Success signal

Every teammate can explain what is being built first, who it serves, what value it creates, and how the approved experience should look and behave.

Turn the approved purple direction into build-ready product infrastructure.

This milestone creates the reusable foundation that lets the team build consistently and integrate cleanly with Miraj's platform work.

Dillon's product and frontend outputs

- Production color, type, spacing, radius, elevation, and motion tokens
- Responsive application shell and navigation model
- Reusable button, input, card, modal, badge, table, filter, and status components
- Role-aware page templates and layout conventions
- Loading, empty, success, review, and recovery state patterns
- Component documentation and visual acceptance examples

Dillon and Miraj alignment outputs

- Route and entity naming
- Authentication and role claims
- Profile, verification, contact, and notification data shapes
- API expectations and response conventions
- Upload, permissions, and environment contracts
- Vertical-slice acceptance fixtures

Claude Code and Codex implementation workflow

1 • Define

Start from the approved journey, component contract, and acceptance criteria.

2 • Build

Generate and refine small reusable slices inside the agreed repository structure.

3 • Verify

Run typecheck, lint, build, route, responsive, behavior, and visual review.

Milestone 3 exit evidence

An approved purple design system, responsive shell, component conventions, integration contracts, working development workflow, and one complete vertical slice ready for team review.

Build the product in small, reviewable vertical slices.

Each slice should connect interface, role behavior, data expectations, responsive design, and acceptance evidence.

01 Authentication and onboarding

Age and location entry, account creation, role selection, profile setup, progress, confirmation, and account recovery.

02 Business verification

Business details, identity and authority, licensing evidence, submission, reviewer status, renewal, and profile badge presentation.

03 Directory and profiles

Search, role and location filters, profile cards, verified details, public and member views, saves, and profile administration.

04 Structured introductions

Permission-based contact requests, request details, recipient review, acceptance, messaging handoff, and status history.

05 Dashboard, notifications, and administration

Role-specific home views, saved activity, request updates, announcements, reviewer queues, moderation, and product configuration.

Review point

Show one complete journey at the end of each slice.

Quality point

Verify responsive behavior, permissions, content, and system states.

Approval point

Record acceptance and the next selected slice.

Integrate, prove the experience, and prepare the handoff.

The final two milestones turn the approved frontend into a tested product experience with clear ownership and a confident launch path.

MILESTONE 5

Integration, QA, and acceptance readiness

- Connect the frontend to approved APIs and services.
- Verify roles, permissions, profiles, verification states, and introductions.
- Run desktop, mobile, cross-browser, keyboard, and accessibility checks.
- Test navigation, forms, notifications, loading, success, and recovery patterns.
- Prepare a clean product walkthrough for Tori and the internal team.
- Track review outcomes with owners and acceptance evidence.

Exit evidence: tested priority journeys, acceptance checklist, review record, and demo-ready product path.

MILESTONE 6

Launch readiness, documentation, and handoff

- Confirm the delivered MVP capability map.
- Complete environment and release checks.
- Prepare user-flow and administrator walkthroughs.
- Document the app map, role behavior, components, integrations, and operating workflow.
- Organize the next-phase backlog across Community, Studio, Business, and Signal opportunities.
- Create approved screenshots and product-story materials for future use.

Exit evidence: approved handoff, tested walkthrough, release checklist, product documentation, and next-phase ownership.

Launch-readiness principle

The product is ready to advance when its primary journeys are understandable, responsive, role-aware, integrated, tested, documented, and easy for the team to demonstrate and support.

Keep every milestone moving through clear roles and short review loops.

PRODUCT APPROVAL**Tori**

Confirm the purple direction, product priorities, role decisions, journey priorities, and milestone acceptance.

PRODUCT STRUCTURE AND FRONTEND**Dillon**

Own user journeys, screen direction, frontend requirements, purple design-system application, implementation review, and acceptance readiness.

BACKEND AND PLATFORM**Miraj**

Own architecture, database, authentication, permissions, verification data, APIs, environments, and technical integration.

CLIENT COORDINATION**Melissa**

Organize questions, meeting inputs, research context, feedback, decisions, and communication follow-through.

OVERSIGHT AND MILESTONE REVIEW**Mac**

Guide priorities, commercial alignment, escalation, scope decisions, and milestone review across the client and implementation team.

Recommended weekly rhythm

Plan	Review the current milestone, approved decisions, active slice, owner needs, and review evidence.
Build	Advance one clear vertical slice with synchronized product, frontend, and platform work.
Review	Show the working journey, capture Tori's feedback, and record the selected outcome.
Update	Refresh the decision log, application map, backlog, acceptance record, and next-slice brief.

The next ten actions.

This sequence turns the purple recommendation into an approved design system and begins the next milestone with visible progress.

- 01 Prepare the purple decision board.**
Show the official logo, palette, type hierarchy, connected-suite screens, and one concise recommendation.
- 02 Run the Tori design-direction review.**
Confirm purple, logo usage, visual personality, and the selected product reference.
- 03 Record the Milestone 2 approval.**
Capture the design choice, MVP boundary, roles, journeys, screen inventory, owners, and acceptance criteria.
- 04 Name the first successful connection.**
Define the exact launch-role journey that proves Bridge's value.
- 05 Select the first vertical slice.**
Recommended starting slice: account onboarding through business-verification submission.
- 06 Package the production purple system.**
Create tokens, component patterns, responsive rules, and reference screens.
- 07 Hold the Dillon and Miraj integration session.**
Align entities, authentication, permissions, API contracts, uploads, environments, and acceptance fixtures.
- 08 Build the Milestone 3 vertical slice.**
Use Claude Code and Codex within the approved component and review workflow.
- 09 Verify the complete journey.**
Run responsive, behavior, data-contract, accessibility, and visual checks.
- 10 Review and select the next slice.**
Present the working journey, record acceptance, and move into the prioritized Milestone 4 sequence.

Recommended next meeting outcome

Leave with purple confirmed, the first MVP journey selected, the Milestone 2 package approved, the Milestone 3 owner sequence recorded, and the first vertical slice ready to begin.

Working basis: Dillon's July 10 six-milestone execution plan, the July 16 milestone decision brief, the July 20 Tori source package and prototype handoff, the official Bridge branding guide, and the verified July 27 deliverables report.

Bridge branding guide.

The client-supplied guide is included as the visual reference for the recommended purple product direction.

LOGO

COLOR PALETTE

USAGE

Deep Purple is our signature accent color. Black and white are our foundation. Used to create a bold, modern, and premium experience.

TYPOGRAPHY

HEADERS – BOLD. CONFIDENT. MODERN.

POPPINS

ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789

Subheads – Clear. Strong. Professional.

MONTERRAT SEMIBOLD

ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789

Body – Clean. Easy to Read.

INTER REGULAR

ABCDEFGHIJKLMNOPQRSTUVWXYZ
0123456789

Use Poppins for headlines. Montserrat for subheads. Inter for body copy and UI text.

VISUAL STYLE

High contrast. Minimal clutter. Purposeful design. A premium experience built for the cannabis community.

BUTTONS & UI ELEMENTS
