

A richer Community feed, a nationwide contract, and verified visual depth.

The production Bridge frontend now demonstrates Tori's image-forward community-news direction with a larger fictional sample feed, complete state filtering, unique editorial photography, and explicit separation between prototype content and live market coverage.

EXECUTIVE OUTCOME

Community News expanded from eight to twenty illustrative posts across twelve sample markets. Product introductions and vendor announcements now sit beside promotions, events, education, industry news, service updates, and market signals. Community and Explore retain all 50 states plus Washington, D.C. The public frontend is deployed at bridge-connected-signal.netlify.app; live member data, backend integration, and Tori's formal product decisions remain separate gates.

SAMPLE POSTS

20

Image-led fictional Community stories

SAMPLE MARKETS

12

Nationwide selector remains 52 options

EDITORIAL ASSETS

56

56 unique hashes and one-time assignments

BROWSER CHECKS

52

Desktop and mobile confirmation suite

Built and verified

- Visual News and Classic Feed treatments.
- Category, market, and favorites controls.
- Twenty distinct sample-post photographs.
- Real raster film-grain overlay adapted to Bridge.
- Nationwide empty states that never imply an empty market.

Truth boundary

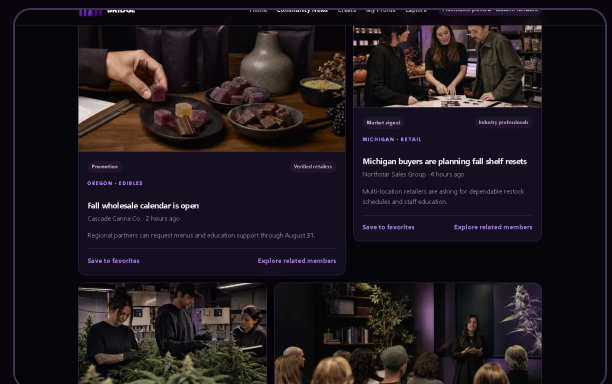

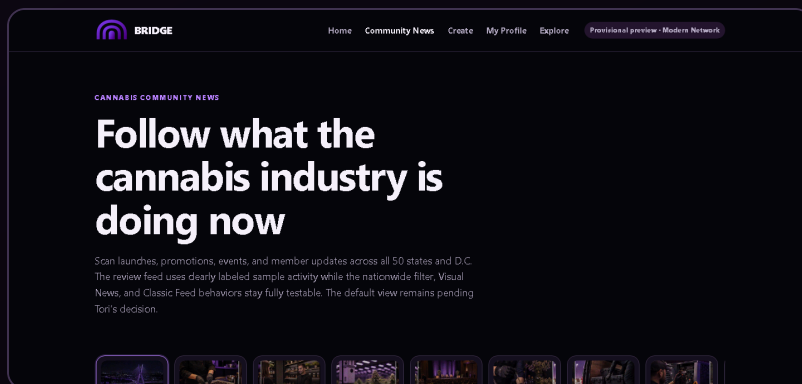

- Every business, post, and activity item remains fictional.
- No paid placement or live market-coverage claim is made.
- No formal Tori approval is inferred.
- Production authentication and live APIs are not represented as connected.
- Legal, verification, and editorial policy still require owners.

The build implements the reviewable frontend behavior while keeping client decisions and production integrations visibly separate.

What is built now.

- | | | |
|-----------|--|-----------------|
| 01 | Nationwide geography contract
Community and Explore share All states, every U.S. state, and Washington, D.C. States without sample records explain the prototype boundary instead of implying unsupported markets. | COMPLETE |
| <hr/> | | |
| 02 | Expanded Community sample feed
Twenty image-led stories across twelve markets demonstrate promotions, product introductions, vendor announcements, events, education, market signals, service updates, and industry reporting. | COMPLETE |
| <hr/> | | |
| 03 | Two feed behaviors
Visual News provides the staggered digital-newspaper direction Tori preferred; Classic Feed preserves the simpler chronological comparison for her default-view decision. | COMPLETE |
| <hr/> | | |
| 04 | Bridge-specific image system
Fifty-six editorial assets have distinct binary hashes and one application assignment each. The reusable Bridge mark and raster grain texture are the only intentional shared visual primitives. | COMPLETE |
| <hr/> | | |
| 05 | Create and audience controls
Promotion creation demonstrates image or PDF upload intent, multi-audience selection, protected-detail restrictions, validation, review, draft, and persisted sample behavior. | COMPLETE |
| <hr/> | | |
| 06 | Profiles and discovery
Explore, public and verified profile views, useful member details, categories, favorites, directions, outside channels, and permissioned introduction language remain reviewable. | COMPLETE |
| <hr/> | | |
| 07 | Entry and responsive behavior
The 21+ review gate, keyboard focus, reduced motion, mobile layouts, image loading, overflow controls, and clean browser-console behavior are verified. | COMPLETE |
| <hr/> | | |
| 08 | Mapped production deployment
The verified development build was promoted through the existing Git and Netlify pipeline to bridge-connected-signal.netlify.app. | LIVE |

Why the larger feed is the right prototype move.

Tori asked for more pictures and less reading, a useful news feed, flexible post types, multiple audiences, favorites, and a nationwide network that stays manageable.

Directly answered

- More pictures and a denser editorial rhythm.
- Promotion as a distinct content type.
- Product introductions and vendor announcements.
- Events, education, industry news, and service availability.
- Adult, retailer, verified-business, professional, and all-member audiences.
- State, category, and favorites controls.

Deliberately not invented

- Real operator activity or live market statistics.
- Medical or treatment claims.
- Paid placement policy.
- Contributor and moderation authority.
- Verification promises or protected-data rules.
- Production ordering, menus, maps, or social integrations.

Retail planning: human, tactile, operational.

Industry reporting: candid and evidence-led.

Facility education: practical work, not stock posing.

BRIDGE VISUAL DIRECTION

The expanded image system uses one strong subject, asymmetric editorial cropping, restricted color, and visible print texture. Bridge retains its Connected purple and near-black identity, uses realistic cannabis-industry scenes, and applies a reusable static raster grain layer so the source photographs stay crisp.

Verification evidence.

The result is covered by machine-checkable provenance and a rendered browser suite.

Image uniqueness	56 editorial assets, 56 source assignments, and 56 unique SHA-256 hashes.	PASSED
Community depth	20 image-led sample posts and all Tori-requested core post types.	PASSED
Frontend build	Typecheck, lint, production build, and all 24 Phase 3 tests.	PASSED
Rendered experience	52 desktop and mobile checks with no failed checks or browser errors.	PASSED

The frontend demonstration is fuller. These gates still matter.

None of the items below should be silently converted into product truth or production capability.

Default Community view	Tori still needs to choose Visual News or Classic Feed as the default.	TORI
Brand and imagery lock	Connected purple, the current Bridge mark, and the realistic grain treatment still need formal acceptance.	TORI
Editorial governance	Contributor eligibility, review, moderation, publishing authority, and paid-placement policy remain undefined.	POLICY
Rollout priorities	First states and member roles must be selected before fictional samples are replaced with rollout content.	DECISION
Verification and visibility	EIN-aware verification, public/member/protected fields, and connection permissions require exact policy.	POLICY
Live data and APIs	Authentication, organizations, profiles, posts, files, search, favorites, and audit behavior need an inspectable integrated vertical slice.	INTEGRATION
External providers	Menus, ordering, maps, and social-channel providers need selection and approved connection boundaries.	INTEGRATION
Commercial concepts	Founding pricing, payment timing, membership tiers, and Bridge League rules remain proposals.	DECISION

- 01 Use the live frontend for Tori's structured accept-or-revise review**
Record route decisions, the default feed, image direction, rollout markets, and any must-keep or reject notes.
- 02 Lock policy before replacing fictional content**
Define roles, verification, visibility, editorial governance, and market claims with named owners.
- 03 Connect one inspectable vertical slice**
Promotion creation plus protected profile projection remains the recommended first end-to-end integration proof.
- 04 Run integrated acceptance and release QA**
Prove success, denial, failure, audit, security, responsive, and recovery behavior against the approved API contract.

CURRENT STATUS

Frontend production deployment: live and verified. Tori formal acceptance: pending. Live backend integration: not proven by this report. All screenshots, business names, posts, and activity shown here are review examples.

Source basis: Tori-provided 39-minute feedback transcript summary; Bridge Phase 2 product contract and acceptance materials; Phase 3 feedback reconciliation; current production repository and Netlify deployment; image provenance manifest; automated type, lint, test, build, and rendered browser QA records.
