

ANSWER AUTHORITY PROGRAM

AEO + GEO Growth Add-On

A focused 90-day layer that turns Fagan Painting's existing SEO momentum into clearer answers, stronger local entity signals, and a measurable presence across AI search.

90 days INITIAL SPRINT	\$500 / month ADDED TO CURRENT AGREEMENT	\$1,500 total INITIAL 90-DAY TERM
---------------------------	---	--------------------------------------

Why this is an add-on: the current agreement covers a baseline level of AI optimization. This add-on funds the dedicated production, local entity, and measurement layer. Dillon owns AEO/GEO; Phil and Mac continue traditional SEO, page publishing, and backlink coordination. Paid media remains with Benson and Legacy Paint Holdings.

01 AEO: answer-ready pages Make the highest-intent pages easy for an answer engine to understand and quote. - Build and approve a 10-query set covering interior, exterior, multifamily/commercial, HOA, and Pittsburgh-area service intent. - Upgrade up to 3 priority service pages with a direct answer in the first 200 words, process/prep/estimate blocks, and stronger internal links. - Create up to 15 service-grouped homeowner Q&A pairs and QA visible FAQ, HowTo, Service, and Organization schema where justified.	02 GEO: entity + local trust Give Google and generative systems one consistent, supportable picture of Fagan. - Create an approved entity and facts sheet for services, areas, credentials, warranty language, phone, website, and project proof. - Reinforce priority service-area signals across up to 3 local pages, Google Business Profile guidance, and core directory references. - Connect service, area, gallery/project proof, and estimate paths without fabricating a street address for this service-area business.	03 Measure: citations + demand Track whether the work is becoming visible and useful, not just whether a page exists. - Baseline and monthly recheck the 10 approved queries in ChatGPT, Perplexity, Google AI Overviews when present, and Copilot. - Log citations, cited pages, competitors, answer quality, and material changes in a simple scorecard. - Report pages specified, implemented, and indexed alongside organic visibility and qualified estimate signals, with pending fields labeled.
---	---	--

90-DAY DELIVERY	WHAT HAPPENS IN EACH PHASE
Month 1 Foundation	Inventory pages and entities; check crawlability, AI-bot access, sitemap, canonicals, rendering, and schema; finalize the 10-query set and first 3 page priorities.
Month 2 Production	Deliver the answer modules, FAQ clusters, internal-link map, entity facts, and schema requirements; coordinate publication and review with Phil and Mac.
Month 3 Reinforcement	Strengthen local/entity signals, complete the citation recheck, identify competitor citation gaps, and deliver the next 90-day roadmap.

KEPT SEPARATE
Traditional SEO publishing and backlink spend, paid advertising or ChatGPT Ads, unapproved web development, review solicitation, and any business facts James has not approved.

DEFINITION OF SUCCESS
Fagan is easier to crawl, understand, answer, and cite for real Pittsburgh-area painting questions. Rankings and AI citations are monitored outcomes, not guarantees.

Kickoff decision: approve the \$500/month add-on for 90 days, confirm the first 3 priority pages and 10 queries, and provide final fact sign-off before publication.
