

Nexla

GOOGLE ADS AND LANDING PAGE READINESS

MCP Studio paid search plan

A live account, landing page, form, and measurement review prepared for Nexla. This packet converts the current audit into a focused launch path while preserving an unpublished state until tracking is validated.

PREPARED

August 25, 2026

ACCOUNT

791 780 2207

CURRENT STATE

Unpublished

01 • EXECUTIVE DECISION

The recommended launch path

Use Variant A as the MCP paid search destination, protect the existing Brand campaign, and replace fragmented legacy Nonbrand activity with one tightly controlled MCP Search campaign only after successful conversion validation.

BRAND BUDGET
\$25

Per day, protected

MCP NONBRAND
\$40.75

Per day after validation

AVERAGE MONTHLY
≈ \$2,000

Using 30.4 average days

What moves forward

- Variant A for MCP paid Search
- One MCP focused Search campaign
- Phrase and Exact match intent
- UTM and GCLID attribution
- Protected Brand Exact coverage

What remains separate

- Enterprise Data Layer until a matching page exists
- Legacy Nonbrand campaigns until replacement approval
- Activation until form success is validated
- Advertiser identity until Nexla approval is confirmed

Decision: The landing page is ready to serve as the working paid Search candidate. Measurement and account verification remain the release gates.

02 • LANDING PAGES

Variant A wins the paid Search role

All supplied MCP pages use the same core content. The practical difference is form access, especially on mobile. Variant A exposes the form near the top and repeats it near the bottom, while the other tested variants defer the only form several thousand pixels.

PAGE	STRUCTURE	FIRST MOBILE FORM	DECISION	REASON
A	Hero form plus body form	~808 px	Recommended	Best direct response path for paid Search
B	Video hero plus body form	~5,495 px	Hold	Only form appears far down the mobile page
C	Centered hero plus body form	~5,336 px	Hold	Only form appears far down the mobile page
D	Testimonial hero plus body form	~5,835 px	Hold	Only form appears far down the mobile page
General	Product education page	No embedded form	Organic use	Useful for education, weaker for paid lead capture

Confirmed form behavior

- HubSpot form captures GCLID and UTM values
- Variant A includes hero and body forms
- Form ID 663d7e71 eb1c 4e1b 94fe 61cac6f16a90
- Official current positioning supports 1,000 plus connectors

Experience issue

The Nexie chat widget obscures a meaningful portion of the landing page on desktop and mobile. Suppress or automatically collapse it on paid campaign destinations.

Recommended destination: <https://nexla.com/lp/mcp-servers/>

03 • CAMPAIGN BUILD

A focused MCP Search campaign

The prior draft mixed MCP, enterprise data integration, data products, and agent data themes into one ad group. The replacement plan uses only MCP intent because that is the page and message currently supported by the supplied assets.

Campaign safeguards

- United States, presence only
- English language
- Google Search only
- Search Partners off
- Display expansion off
- AI Max off
- Maximize Clicks with \$12 maximum CPC

Ad and attribution

- Ten Phrase and Exact MCP keyw ords
- Fifteen MCP focused headlines
- Four aligned descriptions
- Display path mcp / servers
- Final URL suffix for campaign, ad group, keyw ord, and creative attribution
- Current 1,000 plus connector language

Protected Brand

Continue Brand Exact at \$25 per day with its own budget and reporting.

MCP proof campaign

Activate at \$40.75 per day only after measurement validation.

Weekly control

Review search terms, lead quality, and verified conversion reporting before expansion.

Legacy transition: Do not stack the new budget on top of current fragmented Nonbrand activity. Pause the replaced campaigns only when the MCP campaign is approved and ready.

04 • MEASUREMENT

Conversion reporting is pending validation

The form preserves paid media attribution, but the success event is not yet mapped cleanly across HubSpot, Google Tag Manager, Google Ads, and GA4. Launch should wait for one verified end to end test.

GOOGLE ADS ACTION

Secondary

HubSpot Demo Request

RECENT TAG DATA

Pending

No recent diagnostic signal

ENHANCED COVERAGE

27%

Current Google diagnostic

HubSpot success

Use hubspot form success for the exact MCP form.

GTM mapping

Fire the Google Ads demo conversion only on successful submission.

GA4 lead event

Include the new /lp/ paths and verify in DebugView.

Current mismatch

The Google Ads conversion relies on a generic form submit event. The more reliable HubSpot form success event already exists. The GA4 Demo Submission rule is limited to demo paths and does not cover the supplied landing page paths.

Access requirement

The currently authorized Google account does not include Nexla container GTM K7B389B. The Nexla web team can either implement the mapping or grant the agency access.

Validation standard: Confirm one successful test submission in HubSpot, GTM preview, GA4 DebugView, and Google Ads diagnostics before activation.

05 • LAUNCH GATES

What needs to happen next

The campaign specification is complete and remains unpublished. These checks preserve a clean Brand and Nonbrand structure and prevent spend from scaling before the primary lead signal is trustworthy.

1 Map the exact HubSpot success event

Owner: Nexla web team or agency after GTM K7B389B access is granted.

2 Extend GA4 measurement to the /lp/ paths

Confirm the successful event in GA4 DebugView and preserve GCLID and UTM values.

3 Suppress or collapse Nexie

Prevent the chat widget from obscuring form and product content on paid destinations.

4 Confirm advertiser identity

Google Ads currently shows Saket Saurabh as the verified advertiser. Confirm this is expected or complete Nexla business name approval.

5 Supply the Enterprise Data Layer page

Keep that theme separate until an aligned destination is available.

6 Approve the exact replacement plan

Preserve Brand at \$25 per day, activate MCP Nonbrand at \$40.75 per day, and pause only the legacy campaigns being replaced.

Current state: Draft prepared, unpublished, no new spend activated. Final publication requires the exact launch preview and explicit approval.
