

Google Ads health review

Onsite Concrete & Landscape

Fairfield and Solano County, California

August 28–September 3, 2026

Enabled Search campaign with minimal observed delivery.

This review separates delivery from business results. The immediate priority is to investigate delivery constraints and validate the signals Google receives before recommending campaign changes.

Google Ads spend

\$0.00

Conversion reporting is pending validation

Qualified leads

Pending

Connected calls

Pending

Booked estimates

Pending

A platform event or phone-link click is not proof of a real inquiry, connected conversation or booked job. These outcomes have not yet been reconciled with CRM or call records.

Next actions

1. Inspect the enabled Search campaign's delivery constraints and change history.
2. Fix and test the four misconfigured actions in a separately approved implementation, reconcile forms/calls to estimates, and select nonduplicated bidding goals.
3. Evaluate conversion-focused bidding only after reliable signals and business constraints are verified.

Account 1033715894 · America/Los_Angeles

Read on September 4, 2026. The traffic window above excludes September 4; campaign and goal settings describe the inspection date.

What the account shows

- Search | High Intent | Solano County | 2026-07-30 is enabled and eligible at \$7 per day using Maximize clicks.
- The older Onsite Concrete & Landscape Smart campaign is paused at \$7 per day (\$212.80 monthly). Leads-Performance Max-1 is paused at \$5 per day and has an asset-group disapproval.
- All 14 conversion actions in the two-page table are Primary. This is a duplicate-counting risk to investigate, not proof that duplicate conversions occurred.
- Submit lead form, OnSite — Form Submission, Web Phone Calls and Phone Call Click are marked Misconfigured.
- The GA4 Form action counts Every with a 90-day window. Several other form actions count One with a 30-day window. Website-phone-click wording appears on an action whose source is Call from Ads; verify its actual trigger before labeling it a connected call.

Still to validate

- No CRM or call-log reconciliation yet
- No full 28-day or previous-period table export
- No end-to-end tracking test

Evidence and scope
