

Customer Agent Correction Pack

Exact portal fixes required before another readiness cycle or boss demo without caveats. Local package only until an authenticated operator applies the changes.

Priority order

- 1) Stop fabricated URLs · 2) Kill data-conversion overclaim · 3) Repair source set · 4) Retest · 5) Avatar · 6) Disposable handoff only with explicit approval · 7) Separate activation approval

Guardrails to publish

URL RULE (HARD):
Never invent/guess/synthesize a URL. Emit only verbatim retrieved URLs. Otherwise name the page and use the Sources citation block. No /start. No url-*.com. No blog labeled as a service page. No sandbox hosts as public destinations.

DATA CONVERSION RULE (HARD):
Capability yes. Completeness never. Do not say “all history” or “nothing is lost.” Scope depends on source quality, target platform, retention, downstream needs, and discovery.

PRIVACY WORDING:
After refusing private-data requests, do not imply access to recent customer conversations.

Source actions

Action	Item	Why
Attach	/case-studies	Missing approved knowledge
Attach	GTAA UKG case study	Live public page; not in agent sources
Detach / quarantine	SmartCare™ Pricing Calculator (Private, citations OFF)	Invisible pricing influence
Detach	Seven sandbox Solutions pages	Sandbox URLs leaked into citations
Narrow	63 blog posts + Jul 28 industry/public-sector pages	Outside approved initial scope

Retest rounds

- Round A** after guardrail publish: K6, K8, K9, K1, K3, K7, S1, S3. Pass bar = zero fabricated URLs and no “migrate all / nothing lost.”
- Round B** after source repair: full K1–K9 with exact expected URLs; zero sandbox hosts.
- Round C** only after exact approval phrase approve disposable handoff ticket test: K10, S4, S5 as one disposable SmartCare ticket.
