PREPARED FOR BIGORANGE LEADERSHIP

WHAT WAS BUILT, AND HOW TO RUN IT

SEPTEMBER 2026

PURPOSE

This is the one-page-per-skill guide to the tools built around BigOrange's brand, decks, clients and industries. Each skill is a folder that any Claude Code or Codex session can load. Together they let the team produce on-brand decks and documents from a short brief, keep a roster of BigOrange's own clients current, and pitch each of the four industries with sourced, dated material. Nothing here sends, publishes or changes WordPress on its own.

HOW IT FITS TOGETHER

01

Six skills, one brand authority

One skill owns the tokens, logo and validators. The others import from it and never redefine a colour or a font. Industry playbooks feed the deck engine; the client radar feeds kickoff decks; every output passes the same validator before anyone sees it.

1

BRAND SYSTEM

Logo, tokens, deck kit, PDF kit, linter, validator

2

CLIENT DECKS

Four recipes turn a JSON brief into a finished deck

3

CLIENT RADAR

Roster of BigOrange's clients from the public site and WordPress

4

VERTICALS

Home builders, MSPs, manufacturing, landscaping

5

REVIEW

Draft banner, validator and a human look before anything ships

6

APPROVAL

Sending, publishing and spend stay with a named person

Where it lives

All six skills sit in the shared skills repository under `skills/bigorange-*` and are registered in the Claude Code marketplace file next to the Align HCM system. Install by copying a skill folder into `~/ .claude/skills/` (Claude Code) or `~/ .codex/skills/` (Codex). Each skill's `SKILL.md` is the contract; read it before using the skill.

02

The brand authority

Exact BigOrange artwork and the rules for using it on every surface: PowerPoint, PDF, the live website, blog HTML shipped into WordPress, and social graphics. This is the only place colours, fonts and logo rules are defined.

#FF7C00 brand orange sampled from the logo file	5 surfaces deck, document, web, editorial, social	14 deck blocks cover, stats, cards, flows, timelines, charts, close	2 gates brand linter and deck validator
--	---	---	---

PART WHAT IT DOES

Logo assets	The orange and white PNGs with pinned hashes. Never redrawn, retyped or recoloured.
Token ledger	Colours and type per surface. Decks and PDFs use the logo orange with Montserrat; anything on bigorange.marketing uses the live theme's orange, Raleway and Open Sans. The linter enforces the split.
Deck kit	A code library of BigOrange slide blocks. Every deck in this package was built with it.
Document kit	Stylesheets and a renderer for branded PDFs: plans, blog PDFs, guides.
Brand linter	Flags any off-ledger colour or font in a file, and bans Align HCM and Momentum 360 colours outright.
Deck validator	Checks geometry, the logo on every slide, unresolved placeholders, the draft banner, and a verified client logo when one is declared.
Brand research	Dated public research on the site, awards, team, type and colour (expires 2026-12-01).

RULE THAT MATTERS MOST

Every generated deck starts as a draft with a visible banner. The banner comes off only when every number has a granted, dated source. A client deck without a verified logo fails validation instead of guessing.

03 The deck engine

A brief in, a validated BigOrange deck out. Recipes hold the slides BigOrange always says the same way (the method, the measurement chain, the release gates); the brief supplies what changes per client or industry.

RECIPE	AUDIENCE	FILLED FROM	SLIDES
Industry pitch	A prospect in one of the four industries	The vertical playbook, plus verified BigOrange proof only	12
Client kickoff	A newly signed client, first working session	Proposal, intake call, the client radar roster, a verified logo	10
Monthly performance	An existing client, monthly review	The same data contract as the HTML client report; native charts; draft until analytics access is granted	8
Leadership review	Leadership deciding on an audit or plan	Evidence, priorities, rollout, decisions (the September 3 Thursday deck is the worked example)	11

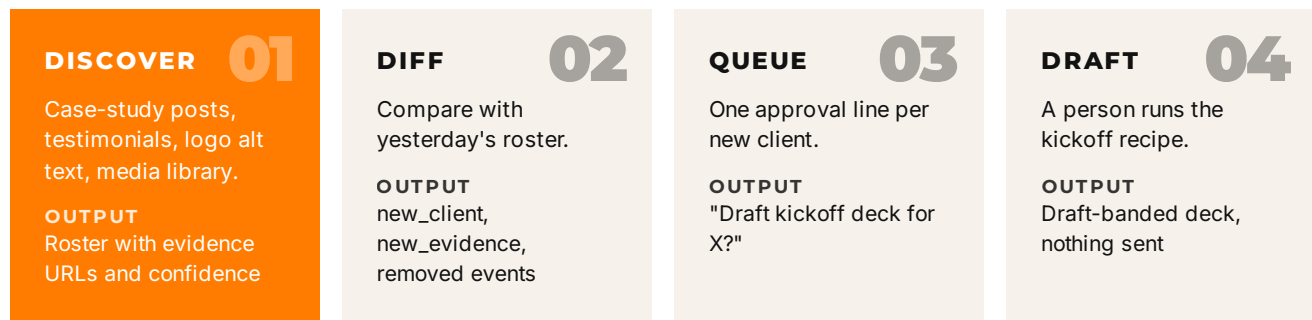

How a deck gets made

- 01 Scaffold a brief for the recipe; every slot the recipe needs is listed with a TODO.
- 02 Fill the slots from the source material. Proof slots accept only verified BigOrange facts.
- 03 Build. The validator runs automatically and fails on any leftover placeholder, missing logo or missing banner.
- 04 Render every slide to an image and look at it. Fix overflow by shortening copy, not by shrinking type.
- 05 File the deck with its brief beside it. Sending stays with a person.

Shipped with this package: four industry pitch decks (one per vertical), a kickoff example, and the Thursday review rebuilt through the engine as proof that the recipe reproduces it.

04 Who BigOrange works with, kept current

Reads bigorange.marketing the way a visitor can (public pages and the public WordPress REST index), collects every company presented as a client in case studies, testimonials and logo strips, and keeps a roster with evidence and a confidence score. A daily run diffs the roster and raises an event when a new client appears.

GUARDRAIL DETAIL

Read-only	Never writes to WordPress, never sends. Authenticated mode uses a role-based, revocable Application Password and still only reads.
Suppression	Dillon's own clients and every tool vendor (StoryBrand, HubSpot, WP Engine, Clutch and so on) are excluded so they never appear as BigOrange clients.
Honest ceiling	Most BigOrange case studies anonymize the client ("Seattle IT firm"). The roster reports that as low confidence rather than inventing a name. Real names need the Application Password or the Agency WordPress connection; the request text is in the skill.
Tested	An offline fixture test proves discovery and the one-new-client event before every change.

05 Four industries, sourced and dated

One skill per industry BigOrange serves: custom home builders (deepest), IT and MSPs, manufacturing, landscaping. Each carries the same five files so the deck engine and any writer can use them the same way.

01 Industry brief

Who the buyer is, their customer's journey, what is usually broken, objections, proof patterns, KPIs, seasonality, compliance cautions. Every fact has a URL and a date; the file expires 2026-12-01.

02 Deck narrative

A slide-by-slide pitch arc with slot names and copy guidance in BigOrange voice. Slides that need verified proof are marked and cannot be auto-filled.

03 Keyword seed

Query clusters by intent with a suggested owner page. Volumes are marked unverified until a real tool run.

04 Content angles

Fifteen to twenty hooks grouped by buyer job, each naming the proof it needs before it ships.

05 Audit checklist (home builders)

Fifty-two yes/no questions across website, proof, local presence, search foundation, follow-up and measurement.

06 Fail-closed rule

No skill invents a statistic, a case study or a homeowner quote. If the evidence does not exist yet, the skill says so and points at how to get it.

06 How everything sounds

The Brand Voice Guide (separate PDF) is the long form. The short form travels inside the brand system so every deck, document and blog is written the same way.

- 01** Write to one busy person as "you". Lead with their worry, not with us.
- 02** Plain verbs: find, fix, show, check, build, book, grow.
- 03** Question, short answer, proof. Keep the rhythm uneven.
- 04** One playful line per section at most, followed by something useful.
- 05** Every number carries a source and a date. Estimates stay labeled as estimates.
- 06** No guarantees, no promised rankings, no invented case studies.

INCLUDED IN THIS PACKAGE

Master growth plan, five builder blog PDFs, the Thursday review deck, the Brand Voice Guide, four industry pitch decks, a kickoff example, the leadership review rebuilt through the engine, and the SEO, AEO and GEO link map for the five blogs.

07 What BigOrange decides

To fold this into the team's own operating skills, three decisions unlock the rest.

1

Confirm the per-surface brand rule: logo orange and Montserrat for decks and PDFs, the live theme for the website.

2

Issue a role-based, read-only WordPress Application Password (or connect the site in Agency) so the client radar can see real client names.

3

Name one factual reviewer and one release owner for anything the engine drafts.

4

Grant read access to Search Console, GA4 and HubSpot when monthly performance decks should carry live numbers.

5

Decide which industry pitch deck goes to a real prospect first, and who presents it. The engine can produce the next one in minutes; the proof on slide seven is the only part that cannot be automated.

Built for BigOrange by Dillon Mohr, September 2026. Research inside the skills expires 2026-12-01 and should be re-verified before reuse after that date.
