

Internal. Every price, hour budget, capacity figure and support term below is a proposal until recorded as agreed. No contract, outreach or account change is implied.

MOMENTUM AI

20 OPEN

MOMENTUM DIGITAL, PHILADELPHIA. THE DIVISION'S PAGES, DECK AND PRICING LIVE ON NEEDMOMENTUM.COM. · FOR FRIDAY 2026-09-11

FOUR LANES. ONE MACHINE.

Momentum built the machine. Now we build yours.

Momentum has served over 1,000 Philadelphia-region small businesses since 2015 (needmomentum.com/about-us/). The division sells what is already proven to work inside Momentum, packaged in the four lanes Mac has already put on the site.

The thesis

Every offer ships with its agent. Delivery hours per client is an acceptance metric of the offer itself, and it is measured. An AI division whose product is Dillon's hours is not an AI division.

SEE THE FOUR LANES

MAC ASKED ON SEPTEMBER 4: HAS OUTBOUND STARTED?

241

COLD EMAILS SENT, SEPTEMBER 2-3

0

VERIFIED HUMAN REPLIES

In the same fortnight, two hand-built AI search audits sent to GT Clinic and Tuxedo Den both reached the quote stage.

The opener that works is the audit, not the cold email. The Snapshot generator makes the audit repeatable. Reporting for any future outbound must be defined before the first send, or the result is not accountable. Decision D10.

Gmail SENT reconciled on September 3: 41 wave-one and 200 wave-two messages from dillonmohr8777@gmail.com to Erie and Pittsburgh businesses, 241 unique recipients, two bounces, two auto-replies, zero verified human replies. The absence of a bounce is not proof of delivery. No further send is authorised by that plan.

THE OPENER • FREE

AI SEARCH SNAPSHOT

A generated, branded three-to-five page audit from one URL: can AI systems read the site, does it say what the business is, and what the models say when asked the questions its buyers ask.

WHY THIS AND NOT COLD EMAIL

Mac proposed exactly this on August 12. The two hand-built 16-page audits sent August 23 both reached the quote stage. The 241 cold emails sent September 2 to 3 got zero verified human replies. The audit is the opener that works; the Snapshot makes it repeatable and lets Jesse run it.

ENGINE

Deterministic checks (crawlability by AI bots, sitemap, canonical, entity and schema, H1, NAP, FAQ presence, mobile overflow) rendered in the Momentum design system, plus a human-run 20-question baseline on two named engines. Fifteen minutes to produce once the generator exists; deeper diagnosis is paid.

Never. Guaranteed citations, guaranteed rankings, invented scores, scraped engine output.

MAC FREDERICK, JULY 28 AND AUGUST 3, 2026: AEO/GEO, AI DESIGN, AI MARKETING, AI AUTOMATION.

FOUR LANES, FOUR FLAGSHIPS, FOUR ON THE ROADMAP

Mac named the lanes. Behind each one sits one launch-ready offer and one next offer. Every flagship names what it excludes as precisely as what it includes, ships with its agent, and carries an hours-per-client target that is measured.

LAUNCH FLAGSHIP

AI SEARCH READINESS SPRINT

Within 90 days the systems that write AI answers can read the site, know what the business is, and are measured monthly on the questions its buyers ask.

\$1,500

SETUP · PROPOSED

\$750

PER MONTH · PROPOSED

10 setup hours. Then 4 hours/month including review. Monthly is for the 90-day sprint, then month to month.

SHIPS WITH ITS AGENT

The Snapshot generator, run monthly against the same frozen 20 questions, plus the readiness checks re-run after every deploy.

Target: Under 4 hours/month per client by month three, measured. The agent does the monitoring.

INCLUDED

- Readiness fixes: AI-crawler allowlist (GPTBot, PerplexityBot, ClaudeBot, Google-Extended), robots and sitemap repair, canonical checks
- Entity and schema correction so the business is typed as what it is, not as a Product
- Answer architecture: FAQ and definition pages that mirror the visible page
- Twenty buyer questions frozen by intent, baselined on two named engines, repeated monthly
- Two useful page improvements per month
- Source-linked observation report and one consolidated revision

NOT INCLUDED

- Paid placements
- Broad PR or link procurement
- Unlimited content
- Unsupported automated scraping or account setup
- Traditional SEO publishing and backlinks where another operator owns them

ACCEPTANCE

AI crawlers can fetch the canonical pages (verified by non-Google user agents). Entity type is correct in Search Console rich results. Every reported observation carries engine, prompt, date and source. Baseline and checkpoint use matching questions and settings.

CUSTOMER DEPENDENCIES

Customer approves source truth, CMS access and final factual claims. Where analytics are unavailable they stay pending rather than estimated. The delivery clock starts when CMS and Search Console access are granted.

ALREADY PROVEN

Fagan Painting, September 2026: the site was not extractable by AI crawlers; robots.txt had a truncated rule and no AI-bot allow list; Search Console typed a painting company as a Product. Those are the first-order blockers this sprint fixes.

PRICED AGAINST

- Fagan Painting bought an AEO/GEO add-on at \$500/month for 90 days (August 12, 2026 proposal)
- GT Clinic was quoted \$900/month total service after the August 23 audit
- The September 4 pack proposed \$1,500 setup and \$1,500/month

What we will not claim. Three measures stay separate: observed mention and citation frequency, verified referral traffic, and validated lead or customer outcomes. Stochastic interfaces get three observations per question and the range is reported. We never cherry-pick, never infer causality from a before-and-after, and never promise rankings, mentions, leads or revenue.

ROADMAP · NEXT

AI Visibility monitoring. The monthly 20-question observation alone, for a site that is already readable. Same price as the AEO lane Fagan bought and the ChatGPT Ads lane Deborah Mara signed.

\$500/month · proposed

02 AI DESIGN *Prototype in a week*

LAUNCH FLAGSHIP

SPEC BUILD

Five working days after kickoff the client is looking at a working prototype of the thing they were describing: a site, a dashboard, or a film, built from real assets and real facts.

\$3,500

SETUP · PROPOSED

fixed, one build

PROPOSED

24 delivery hours. Then none; a second build is a second order.

SHIPS WITH ITS AGENT

The radar site engine, the Puttery dashboard pattern, the client-deck system and the Higgsfield film pipeline, each with its own QA gate.

Target: Under 24 hours per build, measured. The engines do the assembly; Dillon does the direction and the QA.

INCLUDED

- One prototype: a homepage, a reporting dashboard, or a 15-second brand film
- Built from the client's verified logo, real photography and first-party facts
- Measured contrast, responsive at seven widths, reduced-motion state, keyboard access
- One consolidated revision round
- Editable source and a written handoff

NOT INCLUDED

- Hosting, domains and production deployment
- Copywriting beyond the visible prototype
- Multi-page sites, apps, or integrations with live client systems
- Invented testimonials, metrics, awards or team members

ACCEPTANCE

Prototype opens locally with no build step. Zero WCAG AA failures measured. No horizontal overflow at 320 to 1920. Every fact traceable to a first-party source. The client's mark is the exact asset, never redrawn.

CUSTOMER DEPENDENCIES

Verified logo, usable photography, and the facts the prototype will state, supplied before kickoff. Five working days from the day the assets arrive, not from signature.

ALREADY PROVEN

Puttery NYC attribution dashboard with a Higgsfield intro; ten radar homepages live at one hub; the Momentum 360 scroll film site, all built on the same engines.

PRICED AGAINST

- Puttery NYC technology and reporting build proposed at \$2,500 to \$3,500
- Design and branding package published at \$3,000
- The radar batch produced ten source-checked homepages in one run

What we will not claim. A prototype is a prototype. It is not a launched site, a live feed, or a claim about results.

ROADMAP · NEXT

Closed-loop site optimization. Agents propose changes against a defect ledger, a QA gate measures them, a human approves, the change deploys, the result is measured, the ledger learns. This is agentic website optimization, and the runtime already exists as the closed-loop canary.

\$1,000/month · proposed

LAUNCH FLAGSHIP

MOTION CONTENT SYSTEM

Every month the client gets a short brand film and a set of stills, in their identity, with a rights ledger, ready for every social placement, and their logo has never been touched by a model.

\$1,500 SETUP · PROPOSED	\$1,250 PER MONTH · PROPOSED
--	--

8 setup hours. Then 6 hours/month including one consolidated revision. Monthly is plus generation credits at cost, disclosed per piece.

SHIPS WITH ITS AGENT

The Higgsfield plate pipeline with the composite script: keyframe, one test leg, chain, local join, verified-logo overlay, four QA frames, receipt.

Target: Under 6 hours/month per client, measured. Plates are generated; the mark is composited; the QA frames are automatic.

INCLUDED

- Setup: a verified brand kit from the client's own site (logo cleaned, colours measured, contrast checked) and a logo motion treatment
- Monthly: one film of 10 to 16 seconds in 16:9 and 9:16, plus up to six stills with type overlays
- Asset manifest: client, campaign, file, dimensions, version, editable source, owner or licence, claim evidence, SHA256
- One consolidated revision round

NOT INCLUDED

- Media spend and ad-account operation
- Shoots, founder likenesses and custom animation
- Unlimited video
- Website construction

ACCEPTANCE

Brand fidelity, message clarity, factual support, readability, exact dimensions and editable handoff, each scored 1 to 5 and each at least 4. Rendered exports verified, not source filenames. No missing right, unsupported claim or wrong-client asset. The logo is undeformed in the opening, middle, closing and final frame.

CUSTOMER DEPENDENCIES

The customer returns one consolidated list within the review window. A change to audience, offer or channel is a new brief. Generation starts after the brand kit is accepted and credits are authorised.

ALREADY PROVEN

The Momentum 360 Future City films and the Puttery champion intro, both Higgsfield plates with the exact verified mark composited afterwards.

PRICED AGAINST

- Social media marketing published at \$1,000/month
- The September 4 pack proposed \$750 setup and \$1,250/month for campaign production
- Two 4K Momentum 360 brand films cost 278 credits total on August 31

What we will not claim. A missing rights record is a hold, not implied permission. No client's palette, signature, testimonial or source bundle is ever shared by template inheritance. Credits are passed through at cost and shown on every invoice.

ROADMAP · NEXT

ChatGPT Ads management. Already sold once, inside Deborah Mara's three-lane package. Stays a separate line, priced like the other management lanes.

\$500/month · proposed

04 AI AUTOMATION *The attribution spine*

LAUNCH FLAGSHIP

LEAD OPERATIONS AGENT

A named employee can account for every accepted lead, from one agreed intake source through one destination, including duplicates and exceptions, and the agent drafts the first reply.

\$3,500

SETUP · PROPOSED

\$1,500

PER MONTH · PROPOSED

24 delivery hours. Then 6 hours/month, including 2 support hours and one 30-minute review. Monthly is after accepted handoff.

SHIPS WITH ITS AGENT

The intake agent: validation, idempotency, duplicate and conflicting-replay handling, reply draft, exception queue, destination readback, operator report.

Target: Under 6 hours/month per client, measured. The exception queue is the only thing a human touches.

INCLUDED

- Documented field mapping and the exact account, source and destination route
- Required-field validation and stable idempotency
- Duplicate and conflicting-replay handling
- Internal reply draft and a durable exception queue
- Destination readback and a simple operator report
- Rollback instructions and five supervised operator cases
- One agreed improvement per recurring month

NOT INCLUDED

- Autonomous outbound and lead-generation guarantees
- Extra CRM migrations and historical data cleanup
- Multi-location routing and payment processing
- Sensitive clinical or legal records
- Unlimited revisions, 24/7 support, unapproved third-party charges

ACCEPTANCE

Thirty named cases agreed before implementation, each with an executed receipt. No failed critical case, missing case, wrong-client result or unresolved data-loss or routing defect can pass. Five supervised operator cases and written customer acceptance are separate from automated tests.

CUSTOMER DEPENDENCIES

Decision-maker and operator named; source and destination access approved; sample records with lawful use; authoritative mapping and retention policy; baseline volume and manual effort; approved reply claims and tone; testing window; recovery contact. The delivery clock starts only when the agreed dependencies are available.

ALREADY PROVEN

The synthetic lead demo in `outputs/qwen-256k-run/demo.py`: valid intake, duplicate replay, conflicting replay, rejected destination, malformed email, lost acknowledgement, restart, readback mismatch, operator review, second-account isolation.

PRICED AGAINST

- The September 4 pack's flagship, kept at its numbers
- Deborah Mara's package structure: \$500 management lanes inside a \$1,500/month contract

What we will not claim. Customer-facing replies remain internal drafts unless separately authorised. This improves handling; it does not promise more leads.

ROADMAP · NEXT

Attribution Spine. The Puttery pattern: webhook and API ingestion, an identity spine, provenance and freshness on every KPI, one dashboard that ends in a decision. This is data centralization, and the receiver, relay and dashboard already exist with passing suites.

\$3,500 build + \$1,000/month · proposed

QUALIFICATION

TWENTY MINUTES

MINUTE	QUESTIONS AND EVIDENCE
0-3 min	What process is costing time or losing attention? Who owns it and who approves a change? Ask for one recent concrete example.
3-7 min	Walk one item from intake to completion. Which systems, fields, handoffs and exceptions exist? What happens after a failure?
7-11 min	How often does this occur? Get an actual count and sample period, and approximate human effort. Mark estimates as estimates. Which business outcome matters?
11-15 min	Who grants access, validates records and uses the result? What must never happen? What data or contractual restrictions apply?
15-18 min	Select one finite pilot. Explain exclusions, test and acceptance approach, proposed price and support boundary. Ask what would make it a bad purchase.
18-20 min	Confirm next step, owner, missing evidence and date. No readiness or willingness-to-pay claim until the buyer actually states it.

SCORE 0–2 ON EACH

- Relationship approval
- Repeated problem
- Evidence availability
- Access feasibility
- Adoption owner

0 to 2 each. A zero in relationship, access or adoption prevents a build commitment. 8 to 10 supports scoped proposal preparation. 5 to 7 means paid discovery or evidence collection. Below 5 means defer.

DISQUALIFY OR DEFER

- Wants a guaranteed AI ranking
- Has no authorised system access
- Requires sensitive-data handling outside capabilities
- Cannot name an operator
- Wants three CRMs and unlimited changes for the one-workflow fee
- Asks to misrepresent a prospect site as the official live business site

A low lead count alone is not a disqualification if the process is valuable and measurable.

This is an internal prioritisation rule, not a validated predictor of sales.

THE DEMO, AND THE TEN ANSWERS

HANDLING *answering* OBJECTIONS

Run the AI Search Snapshot live on needmomentum.com. Show the readiness checks, the entity finding, and the recorded 20-question baseline. Then show the Fagan run reproducing the September findings. Then the lead-ops demo: “This shows the proposed workflow using test records. Your system integration and acceptance are a separate implementation.” Show receipts and exceptions rather than hiding failure screens. End with what would be connected for this buyer, their acceptance criteria and their dependencies.

“We already have a CRM.”

We start with it. The pilot fixes one handoff rather than selling a replacement.

“Can't I just buy an AI subscription?”

Yes. This fee covers mapping, implementation, tests, operator training and bounded support.

“Will this create more leads?”

This pilot improves handling. Lead-generation results require separate evidence.

“What if it sends something wrong?”

Replies stay internal drafts until a separately approved sending policy exists.

“What if the API fails?”

Work pauses or enters the exception queue. Ambiguous writes are reconciled before retry.

“Is our data used for training?”

We verify the selected provider's current contract and settings before using real data. We do not promise an unverified policy.

“Why the setup fee?”

It funds mapping, implementation, failure testing and handoff for the finite scope.

“Can you do everything this week?”

We commit dates after access and capacity checks. The initial implementation is not guaranteed within a week.

“Who owns it if you leave?”

The proposal must specify accounts, code and IP rights, configuration and handoff before sale.

“Can we cancel?”

Renewal, cancellation, transition assistance and data return or deletion terms are written into the agreement.

SEQUENCE

DEPENDENCY ORDER, NOT A PROMISE

BEFORE
FRIDAY

Register, division doc, four flagship sheets, the films, the deck addendum, the Snapshot demo on Momentum's own domain.

FRIDAY SEPT
11

Resolve charter, protected time, fees, support, budget, naming and account nomination with Mac. Record declined and deferred items too.

WEEK OF SEPT
14

Review up to five relationship-approved accounts. Run the Snapshot on each with permission. Discovery on available buyers.

WEEK OF SEPT
21

Tailor two finite scopes. Resolve deck claims and named-case permissions. Qualified demos.

WEEK OF SEPT
28

Exact-recipient proposals through approved routes. A draft is not a sent proposal or a signed sale.

30-DAY REVIEW

Reconcile actual time, funnel state and cash. First access-ready signed pilot scheduled. Hours per client measured against the offer's target.

ECONOMICS

UNDER THE PACK’S OWN ASSUMPTIONS

\$75 loaded labour/hour, 10% sales allowance, \$500 fixed monthly allowance, per-offer tool allowances of \$75 (AEO), \$100 (Motion), \$150 (Lead Ops), full collection. Same method as the September 4 pack's economics.py.

SCENARIO	MONTHLY REVENUE	HOURS	CONTRIBUTION
one client on each recurring flagship	\$3,500	16	\$1,125
same, double hours	\$3,500	32	\$-75
two clients on each recurring flagship	\$7,000	32	\$2,750
one of each, labor \$125/hr	\$3,500	16	\$325
Plus one Spec build in the month	+\$3,500 once	+24	+\$1,250 once

Recurring: 750 + 1,250 + 1,500 = 3,500. Hours 4 + 6 + 6 = 16 at \$75 = 1,200. Tools 325. Gross 1,975. Sales 350. Fixed 500. Contribution 1,125. At double hours: gross 775, contribution negative 75. Spec build once: 3,500 - 1,800 labour - 100 tools - 350 sales = 1,250 before fixed cost. Rows on the page are produced by economics_v2.py through the September 4 pack's engine, not typed.

These are calculations under assumptions, not actual revenue and not net profit. Booked, invoiced and collected stay separate totals. Missing collections stay unknown, not assumed paid. Double hours takes the recurring cohort below zero, which is why hours per client is an acceptance metric of every offer.

BEFORE ANYTHING IS SOLD

20 OPEN DECISIONS

Every item below is OPEN. Nothing here is agreed. Prices, capacity, compensation and targets are proposals until recorded as agreed. No contracts, outreach or account changes are implied by this file or by any collateral generated from it.

D01 Division charter

Is the AI division chartered under Momentum Digital, with the four lanes Mac already put on the site as its structure?

Proposed: Yes. Four lanes: AEO/GEO, AI Design, AI Marketing, AI Automation. One launch flagship per lane, one roadmap offer per lane, one free opener.

Blocks: any client-facing offer sheet, any outbound

OPEN

Mac + Dillon

D02 Protected capacity

How many hours per week are protected, and which existing obligations are explicitly subtracted?

Proposed: 15 h/week: 10 delivery/review, 5 discovery/documentation/coordination. At most two active builds and one new setup start per week.

The pack's own arithmetic: a 10-hour delivery week minus three clients' recurring allocation leaves about 5.8 setup hours/week. The reconsidered plan answers this with hours-per-client as an acceptance metric of every offer, measured.

Blocks: any delivery date commitment

OPEN

Mac

D03 Compensation arrangement

Protected paid capacity, commission-only, or hybrid, and at what figures?

Proposed: Protected paid capacity plus a bounded incentive. Figures deliberately left open.

No ownership share and no commission percentage is agreed. 30-day review compares actual collected contribution, accepted work, rework, adoption and hours before expanding.

Blocks: division launch

OPEN

Mac + Dillon

D04 Price: AI Search Readiness sprint

Confirm or change \$1,500 setup and \$750/month for the 90-day sprint.

Proposed: \$1,500 setup, \$750/month. Anchors: Fagan bought \$500/month; GT Clinic was quoted \$900/month; the pack proposed \$1,500/\$1,500.

Blocks: proposal to any named buyer

OPEN

Mac

D05 Price: Spec build

Confirm or change \$3,500 fixed for one prototype in five working days.

Proposed: \$3,500 fixed. Anchors: Puttery build proposed at \$2,500 to \$3,500; Design and branding published at \$3,000.

Blocks: proposal to any named buyer

OPEN

Mac

D06 Price: Motion and Lead Ops

Confirm or change \$1,500 + \$1,250/month (Motion, credits at cost) and \$3,500 + \$1,500/month (Lead Ops).

Proposed: As stated. Lead Ops keeps the pack's numbers. Motion sits above the published \$1,000/month social package because it includes film.

Blocks: proposal to any named buyer

OPEN

Mac

D07 Support boundary

Confirm the support commitment and name primary and backup coverage.

Proposed: Mon to Fri 9am to 5pm Eastern excluding agreed holidays; acknowledge a blocking incident within one business day.

This is an acknowledgement commitment, not a resolution or uptime SLA. Coverage names are required before signing anything.

Blocks: any signature

OPEN

Mac + Dillon

D08 Named engines for AI Search

Which two engines are named for the 20-question baseline, and by what access method?

Proposed: Selected at kickoff. No unsupported automated scraping or account setup assumed. The demo uses a human-run baseline on Momentum's own domain.

Blocks: AI Search baseline

OPEN

Dillon + buyer

D09 Account nomination

Which up to five relationship-approved accounts may receive a Snapshot and a discovery call?

Proposed: Reviewed the week of September 14.

Blocks: discovery calls, Snapshot runs on client domains

OPEN

Mac

D10 Outbound status and reporting

Has outbound started, and what reporting exists? (Mac's question, September 4.)

Proposed: It has: 241 cold emails from Dillon's Gmail on September 2 to 3, zero verified human replies. In the same fortnight two hand-built audits reached the quote stage.

Proposed: the audit-led opener replaces cold email, and reporting (sends, replies, quotes, signed, collected as separate counts) is defined before any further send.

Blocks: outbound

OPEN

Mac + Dillon

D11 Deck sign-off

Resolve the open claims and named-case permissions in the existing 26-slide deck, and approve the eight-slide division addendum.

Proposed: AEO scope and price, guarantee language, current published pricing, named-client use, whether Fractional CMO is a live offer, plus the addendum.

Blocks: any demo using the deck

OPEN

Mac

D12 Original media reuse

Which original media may be reused, for which clients, under what permission?

Proposed: Unresolved. A missing rights record is a hold, not implied permission.

Blocks: Motion content deliverables using existing media

OPEN

Mac

D13 IP, accounts and exit

Who owns accounts, code and IP, and configuration, and what is the handoff on exit?

Proposed: Must be specified in the proposal before sale. Pre-existing engines (radar, Puttery pattern, client-deck, film pipeline) versus newly built client work need separate treatment.

Blocks: any signature

OPEN

Mac + Dillon

D14 **Renewal, cancellation, data return**

What are the renewal, cancellation, transition-assistance and data return or deletion terms?

Proposed: Must be written into the commercial agreement.

Blocks: any signature

OPEN

Mac + Dillon

D15 **Provider data-training policy**

Which providers, and are their current contracts and settings verified before real customer data is used?

Proposed: Verify before use. Do not promise an unverified policy.

Blocks: any real customer data in a workflow

OPEN

Dillon

D16 **Working dates**

Confirm the meeting is Friday September 11 and the working week that follows.

Proposed: Friday September 11 per Dillon on September 5. September 7 is Labor Day.

Blocks: the launch sequence

OPEN

Mac

D17 **Site production target**

Is 50 unique unbuilt prospect sites the target, with 20/day as fallback?

Proposed: Dillon's current instruction. Neither rate is a measured service guarantee and neither may be quoted to a buyer as one.

The September 5 selector run 20260905-020500 found 3 source-ready candidates against an expected 20 and is BLOCKED. No twenty-site batch exists. Production is owned by the New Realtime Voice Chat session, not by this kit. No site-count claim appears in any division collateral.

Blocks: any site-count claim in collateral

OPEN

Dillon

D18 Budget and tool spend authority

What spend is authorised, for which tools, and who approves an increase?

Proposed: Resolved at the meeting.

Dillon authorised Higgsfield for division collateral on September 5 with roughly 600 to 800 credits available. This plan budgets 365 with a hard stop at 450. Client-facing paid generation is separate and needs its own authority per client.

Blocks: client-facing paid generation, any third-party charge

OPEN

Mac

D19 Division name and lockup

Is the division presented as Momentum AI, lettered as the existing Momentum Digital mark plus the word AI, with no new logo?

Proposed: Yes. All collateral in this kit uses that lockup. It sits under Momentum Digital on needmomentum.com, not under Momentum 360, and uses the Momentum Digital tokens, not the 360 cyan and yellow.

This is Dillon's creative call for the meeting. Mac owns the brand; if he changes it, the kit rebuilds from one string.

Blocks: publishing any division collateral

OPEN

Mac

D20 Generation credits as pass-through

On the Motion content system, are Higgsfield credits billed at cost per piece, disclosed on the invoice, on top of the \$1,250/month?

Proposed: Yes. Measured rates on September 5: keyframe 8.5 credits, Seedance 2.0 Mini 10 credits per four-second leg. A typical monthly film plus six stills is roughly 90 to 120 credits. Reverify against the live account before quoting.

Blocks: Motion content proposal to any named buyer

Mac

Decide, then
