PREPARED FOR BIGORANGE LEADERSHIP

SEPTEMBER 3 REVIEW

PRIVATE REVIEW DRAFT

PURPOSE

This turns the original pilot into one plan you can actually review: what I promised, what I've added at no charge, what WordPress needs next, what each page has to prove, and how the content should tie back to real business outcomes.

LEADERSHIP BRIEF

01 Executive outcome

You now have one clear picture of site health, keyword opportunity, content production, and how releases get governed. My recommendation is not to publish everything at once. Fix the high-leverage technical defects first, then release pages and articles in a controlled sequence, each one with factual review, image permission, schema validation, internal-link QA, and measurement attached.

370

published URLs
299 posts + 71 pages

24

authority assets
19 existing + 5 new

171

Moz snapshot
unique tracked
keywords

5

separate new blogs
6,093 words total

- 01** Original paid pilot: 35 hours at \$30 per hour, totaling \$1,050.
- 02** Milestone 1: 15 hours of discovery and strategy. Milestone 2: 20 hours for one pillar, two supporting articles, technical SEO and WordPress implementation.
- 03** Expanded investment: I've included the five new blogs, a deeper page-level framework, branded review collateral, and implementation packaging at no charge, as proof of commitment. All of it is subject to your approval and prioritization.
- 04** Phase 2 ideas, social, downloadables, webinars, stay on the roadmap. They're not included paid production unless you approve a later scope.

02

Current site and ranking truth

Site health and ranking are one system, not two. The September 1 crawl covers all 370 published URLs; the Moz numbers are the August 14 snapshot, so refresh them before making any external performance claim.

SLICE	VERIFIED RESULT
Live URLs	370 published: 299 posts and 71 pages
Public sitemap	349 URLs; 21 published pages missing
Priority ledger	8 P0 • 38 P1 • 176 P2 • 148 P3
Moz snapshot	171 unique keywords; 27 positions 1–3; 28 positions 4–10; 23 positions 11–20; 93 unranked
Builder lane	21 tracked terms; 17 ranked; 13 positions 1–3; one position 4–10; three positions 11–20

Highest-leverage defects

- 01 Fix the homepage typo, "Stategic" should read "Strategic," everywhere it shows up: metadata, Open Graph output, and schema.
- 02 Reduce /ai-search-optimization-services/ from four H1 elements to one descriptive page H1.
- 03 Remove the accidental nofollow directive on that page, and check the other 15 published nofollow pages one by one before touching them.
- 04 Restore the 21 published pages missing from the sitemap only after confirming each should be indexable and canonical.
- 05 Improve the builder hub mobile critical path. The August 20 sample showed performance 32 with LCP near 36 seconds; remeasure after media and script work.
- 06 Fix missing or useless alt text, but only where the image actually carries meaning; leave decorative images empty.

03

The page-by-page optimization contract

Every public page needs one clear job and one owner. SEO gets you found, AEO gets your answer used, GEO gets you cited as a real source, and the conversion work makes the next step honest and easy to take.

01

Intent and query

One primary query family, search intent, audience, funnel job and non-cannibalizing parent relationship

02

Visible structure

One H1; direct answer near the top; descriptive H2s; scannable definitions, steps, comparisons or tables where useful

03

Trust and proof

Named author or reviewer; current dates; approved project evidence; precise attribution; no unsupported guarantees

04

SEO metadata

Unique title and description; canonical; index/follow decision; social title/image; sitemap eligibility

05

AEO

Answer-first passages; quotable definitions; concise FAQs written for readers; entity names and relationships stated plainly

06

GEO

Original information gain; stable citations; local/service context; consistent organization, people, services and locations

07

Schema

Only types supported by visible content; Article/BlogPosting, BreadcrumbList, Organization, Service or LocalBusiness as appropriate

08

Media and access

Descriptive filename, dimensions, compression, lazy loading below the fold, meaningful alt text, keyboard/focus and contrast review

09

Links and action

One parent link, relevant sibling links, contextual CTA, no broken redirects, no orphan page

10

Measurement

Search Console query/page baseline, analytics engagement, form or booking event, CRM source and sales acceptance

04 Recommended page classes

The checklist is the same, but the copy should not be. Each template needs its own answer pattern and proof sequence.

PAGE CLASS	PRIMARY JOB	RECOMMENDED ANSWER PATTERN	SCHEMA AND CONVERSION
Homepage	Route the right visitor	Who BigOrange helps, what changes, proof, capabilities, next step	Organization + WebSite; primary consultation action
Service pages	Explain one solution	Problem, approach, deliverables, fit, proof, process, FAQs	Service + Breadcrumb; contextual working session
Industry hubs	Own a vertical topic	Audience problem, strategic model, proof, supporting resources, next step	CollectionPage or Service; pillar-to-cluster links
Location pages	Prove real local relevance	Service area, local considerations, nearby proof, correct contact path	LocalBusiness only when facts support it
Case studies	Show reasoning and evidence	Context, constraint, decision, execution, approved result, lessons	Article; route to related service
Blog posts	Answer a real question	Direct answer, definition, decision table, steps, FAQs, sources	BlogPosting + Breadcrumb; parent and booking links
About/people	Establish entity trust	Current roles, expertise, responsibilities, affiliations and contact context	AboutPage/Person when accurate
Conversion pages	Remove friction	Who it is for, what happens next, privacy expectation, confirmation path	No unnecessary markup; verified event tracking

05

Five separate blogs tied to verified gaps

The builder hub already owns the ranked builder terms. These five articles go deeper: four exact gaps where you're not ranked at all, and one page-two opportunity, without replacing the commercial service page.

ID	PRIMARY QUERY	TITLE	WORDS
BLOG-01	marketing ideas for homebuilders	11 Home Builder Marketing Ideas That Build Trust Before the First Call	1,420
BLOG-02	advertising for builders	Home Builder Advertising: Where to Spend First and What to Measure	1,221
BLOG-03	home builder marketing automation	Home Builder Marketing Automation: 7 Follow-Ups Worth Automating	1,118
BLOG-04	home builder marketing solutions	How to Choose Home Builder Marketing Solutions Without Buying Random Tactics	1,109
BLOG-05	custom home builder marketing agency	When Should a Custom Home Builder Hire a Marketing Agency?	1,225

- 01** Every blog opens with a direct answer, then works through a definition, decision support, practical steps, five reader FAQs, a link back to the parent hub, and a low-pressure booking CTA.
- 02** Every draft includes title, meta description, proposed slug, featured-image brief, alt text, canonical candidate and BlogPosting/Breadcrumb structured-data candidates.
- 03** FAQ content stays in for reader and answer-engine value. No one can honestly promise FAQ rich results.
- 04** Before anything goes public, it still needs your factual review, a fresh internal-link check, approved imagery, accessibility QA, and a WordPress preview pass.

06 Architecture and internal linking

The authority model is simple: one commercial parent page, with educational articles supporting it. The service page stays the primary conversion target. Articles answer narrower questions, earn their own discovery, and pass relevance back to the hub.

LAYER	ROLE	LINK BEHAVIOR
Builder hub	Commercial authority for marketing agency for builders	Links to the five articles in a clearly labeled resource section
Five blogs	Exact-gap and planning answers	Each links to the builder hub and the booking page; sibling links only when context genuinely helps
Existing 19 assets	Cross-industry content and schema package	Keep the current 66 relationship map; add only reviewed links that preserve topic boundaries
Navigation and sitemap	Discovery and crawl control	Do not add drafts; add only approved public URLs with final canonicals
Case studies and proof	Evidence layer	Link to the service or article whose claim the proof supports

CANNIBALIZATION RULE

The builder hub owns the broad commercial intent; each blog owns one narrower question. If Search Console later shows two URLs fighting over the same query, strengthen whichever one should own it, merge the redundant passages, update anchor text, and only consolidate once the evidence backs it up.

07

WordPress backend release checklist

The five posts go into WordPress as private drafts. Nothing goes public until the release owner has confirmed both the visible content and every technical field.

- 01** Create a draft post with the proposed slug; never reuse an existing public slug without a redirect and canonical decision.
- 02** Select the correct author, category and review owner. Remove irrelevant default tags.
- 03** Add the approved featured image, meaningful alt text, caption or credit when required, and social sharing image.
- 04** Set title, meta description, canonical and robots. Confirm index, follow only at release time.
- 05** Keep one visible H1 supplied by the theme or editor, not both. Verify heading order in the rendered preview.
- 06** Insert the visible article, not metadata notes. Validate every internal and external link.
- 07** Add BlogPosting and Breadcrumb structured data only when fields match visible content. Keep FAQ schema as semantic candidate only, without rich-result claims.
- 08** Preview desktop and mobile. Check keyboard focus, forms, contrast, overflow, console errors and page speed.
- 09** Run schema validation, sitemap discovery and Search Console URL inspection after publication. Sitemap inclusion is not proof of indexing.
- 10** Record post ID, final URL, reviewer, approval date, publish date and first 30-day measurement checkpoint.

08

Measurement from discovery to revenue truth

Ranking and traffic are leading evidence, not the finish line. The reporting needs to keep the whole chain intact: query, landing page, meaningful action, qualified inquiry, CRM opportunity, and the sales outcome.

1 DISCOVERY Search Console impressions, queries, position and page <i>Is the intended page being retrieved for the intended query family?</i>	2 ENGAGEMENT Analytics engaged sessions, scroll and next-page behavior <i>Did the answer help the visitor continue?</i>	3 ACTION Verified form, booking, phone or email event <i>Did the page create a real hand raise?</i>	4 QUALIFICATION CRM source, service, market, timing and fit <i>Was the inquiry accepted by sales?</i>	5 OUTCOME Opportunity and closed business <i>What content assisted a commercially meaningful result?</i>	6 LEARNING Sales notes, lost reasons and content requests <i>What should be improved, expanded or retired?</i>
--	--	--	--	---	---

Recommended cadence

- 01 Weekly:** indexing, broken links, form delivery and anomaly checks.
- 02 Monthly:** query-to-page ownership, content decay, qualified-inquiry review and editorial backlog.
- 03 Quarterly:** technical crawl, schema coverage, internal-link graph, page consolidation and conversion-path review.

09 90-day controlled rollout

This sequence protects the rankings you already have while turning the new work into measurable public assets.

DAYS 1-14 01

Repair homepage typo, H1 duplication, nofollow review, sitemap gaps and critical builder-hub performance; approve five blog facts and imagery

EXIT GATE
P0/P1 defects assigned; clean previews; tracking baseline captured

DAYS 15-30 02

Release the first two articles; add reviewed hub links; submit sitemap and inspect URLs

EXIT GATE
Published pages render correctly; schema valid; events verified

DAYS 31-60 03

Release the remaining three at a sustainable cadence; improve one related proof asset or market page

EXIT GATE
No cannibalization signal; editorial and sales feedback recorded

DAYS 61-90 04

Review query ownership, engagement, qualified inquiries and sales use; refresh weak titles, intros or links

EXIT GATE
Leadership decision on Phase 2 and the next quarter backlog

12-MONTH SCALE

Build toward the StoryBrand model, one pillar, three subpillars, nine blogs, but only add the next asset when Search Console, client questions, or sales feedback actually justify it. Add one factual, approved proof item a month, and refresh what's winning before creating anything close to a duplicate.

10 Thursday decisions

The Thursday session should end with named owners and release gates, not a longer, unprioritized idea list.

1

Approve the five blog topics and their intended keyword ownership.

2

Name one factual reviewer and one WordPress release owner.

3

Approve or replace the featured-image briefs and confirm permissions.

4

Confirm the first technical repair sprint and the builder-hub performance owner.

5

Choose the first two articles for public release after QA.

6

Confirm the measurement chain from web events to CRM and sales acceptance.

7

Decide whether Phase 2 social, downloadable and webinar production should be scoped separately.

I put this together as more proof of what I want to invest in BigOrange and the work you deliver for your clients. Public claims, imagery, and release timing all stay subject to your review.
