

The first 90 days: make physician authority easy to find, easy to trust, and easy to act on.

A practical search, AI visibility, local presence, website, and paid media plan

PREPARED BY MOMENTUM DIGITAL · 12 SEPTEMBER 2026

for Dr. Ghazala Farooqui and GT Clinic

Based on the confirmed engagement, the proposal correspondence, the 21 August audit, and a fresh review of the public website on 12 September.

Protect what is already strong. Connect the pieces that turn expertise into consultations.

GT Clinic does not need a louder story. It needs one connected system that makes Dr. Farooqui's real expertise clear across the website, Google, Maps, AI answers, and the consultation path.

01

Be found

Own the highest-value service and local questions with one clear page for each intent.

02

Be trusted

Make physician credentials, review, sources, and independent corroboration easy to verify.

03

Be measured

Connect rankings and paid traffic to privacy-safe consultation milestones.

ENGAGEMENT NOW CONFIRMED

The \$900 monthly quote was accepted 9 September 2026; the contract displays signatures from Ghazala Farooqui and Jesse. The client-specific quote states a six-month initial term followed by month-to-month service, with cancellation available at any time on 30 days paid notice. The media budget remains separate and set by GT Clinic. Google bills GT Clinic directly while Momentum receives management access. Any additional fee, software, or cost requires written client approval.

Preserve

- Physician-led positioning and Dr. Farooqui's 20+ years of experience.
- The clinic's aesthetic, regenerative, and functional medicine breadth.
- The expanded service, FAQ, location, and physician content now live.
- The exact clinic identity, address, phone, and brand artwork.

Connect

- One intent, one canonical page, one clear consultation action.
- Website, Business Profile, directories, and physician profiles.
- Search Console, analytics, call or form outcomes, and reporting.
- Google Ads only after the landing path and measurement are verified.

CURRENT STATE

The public site has moved forward since the August audit. The next task is disciplined consolidation.

LIVE NOW Clearer homepage	The homepage now has a primary heading, substantial aesthetic and functional medicine sections, prominent service pathways, and a visible consultation action.
LIVE NOW Physician authority	Dr. Farooqui's founder role, triple board certification, clinical experience, biography, training, and physician-performed model are prominent.
LIVE NOW Answer content	A dedicated physician-answered FAQ covers major service categories. Service and nearby-location pages contain local context, questions, and internal links.
VALIDATE Conversion path	Primary consultation links still lead to the website contact form. The form includes text-message consent language, but the Boulevard path and end-to-end measurement remain decisions to close.
VALIDATE Medical and local claims	Long FAQ and location pages include treatment, outcome, distance, competitor, and provider claims. Create a clinic-approved review standard, source ledger, and revision date before scaling them.

Starting benchmark from the 21 August audit

19 estimated ranking keywords SEMRUSH	2 tracked AI mentions SEMRUSH	29 mobile performance score LAB TEST	0.6 Ahrefs public Domain Rating PUBLIC
---	-------------------------------------	--	--

These are dated third-party and lab snapshots, not owned analytics. Rerun them after access and compare directionally against the same definitions.

What the agreement means in practical weekly work.

Contract area	Work in practice	Proof we will show
Website & SEO	Initial edits, ongoing management, on-page and technical SEO, two new website pages per month, media and content updates.	Change log, crawl checks, Search Console queries, page-level movement.
Local SEO	Google Business Profile management, weekly posting, NAP corrections, citations, profiles, and reputable listings.	Profile completeness, local actions, Maps visibility samples, citation ledger.
AEO / GEO	Answer restructuring, FAQ and schema work, internal links, physician entity clarity, citable source signals, AI visibility sampling.	Structured-data validation, answer coverage, citations, correctness by prompt and engine.
Google Ads	Account and campaign management with GT Clinic ownership and direct client billing; paid landing path after tracking passes.	Search terms, spend, qualified consultation signals, negative keywords, change history.

CLIENT CONTROL IS PART OF THE OPERATING MODEL

GT Clinic retains its Google Ads account, campaigns, conversion tracking, audiences, data, content, and brand assets. Momentum works through management access. Additional charges require approval.

What this plan does commit to

- A defined work queue and visible weekly progress.
- Consistent local identity and stronger page ownership.
- Measurement that separates Google, Maps, AI, and paid media.
- Iteration based on verified signals.

What it does not promise

- A specific ranking position or deadline.
- A fixed lead volume or return on ad spend.
- A directory list before relevance and availability are checked.
- Paid launch before tracking and approvals are ready.

Five connected workstreams. One patient journey.

1

Establish the source of truth

Connect Search Console, GA4, Tag Manager, Business Profile, the form or Boulevard path, and privacy-safe outcome stages. Record exact owners and baselines.

2

Clarify page ownership

Map priority services and locations so each valuable query has one best page. Protect strong pages, merge overlap, rewrite weak titles and headings, and simplify internal links.

3

Publish physician-reviewed answers

Turn real consultation questions into concise answer sections, FAQs, comparisons, and new pages. Attach author, reviewer, revision date, source links, and valid schema where appropriate.

4

Earn independent corroboration

Align the practice and physician profiles across trusted directories and professional sources. Pursue fewer, stronger mentions that validate the same facts.

5

Convert and learn

Launch the first paid path only after measurement passes. Review search terms, pages, Maps, AI answers, and consultation quality together every week.

THE MONTHLY CONTENT RULE

Two new pages should fill proven gaps, not feed a calendar. Each page needs a defined query set, patient question, physician reviewer, consultation path, internal-link role, and measurement plan before drafting begins.

PAID SEARCH

Build Google Ads after the measurement path is credible.

A clean paid launch is a controlled extension of the website strategy, not a shortcut around it.

Account structure	Use a GT Clinic-owned Google Ads account with GT Clinic billing. Momentum receives management access and documents each material change.
First campaign	Begin with one priority service and one local consultation intent. Keep brand protection, service intent, and exploratory queries separate.
Landing path	Send traffic to one focused page with physician authority, service fit, clear expectations, and one consultation action. Preserve GCLID and UTMs.
Tracking gate	Verify form or scheduling completion, deduplication, consent, referral exclusions, call handling, and source capture before enabling spend.
Optimization signal	Use privacy-safe consultation milestones and clinic feedback about fit. Do not send symptoms, treatment details, or patient information to advertising or AI tools.

LAUNCH CONDITIONS

Priority service chosen · landing page approved · conversion path verified · monthly media budget confirmed in writing · account ownership and billing confirmed · campaign review completed.

A sequence that closes the foundation before it adds volume.

1

DAYS 1-14

Instrument and stabilize

- Confirm owners, goals, top services, and approvals.
- Back up site and document rollback.
- Audit contact form and Boulevard decision.
- Connect GSC, GA4, GTM, GBP, Ads, and outcomes.
- Rerun crawl, mobile, schema, and index checks.
- Freeze ranking, Maps, and AI prompt baselines.

2

DAYS 15-30

Correct high-intent paths

- Resolve page ownership for priority services.
- Review high-risk medical and competitor claims.
- Begin NAP and profile corrections.
- Protect and improve proven local pages.
- Repair titles, headings, internal links, and schema.
- Approve the first paid landing brief.

3

DAYS 31-60

Build authority and the first paid path

- Publish two reviewed pages against proven gaps.
- Complete first citation and profile wave.
- Validate conversions end to end.
- Strengthen physician and practice entities.
- Launch the focused landing page.
- Launch Google Ads only after the gate passes.

4

DAYS 61-90

Compound what earns trust

- Expand pages gaining impressions or citations.
- Review search terms and consultation quality.
- Reclaim mentions and strengthen trusted sources.
- Improve queries sitting near page one.
- Retest Maps and AI answer visibility.
- Set the next-quarter test portfolio.

Timing assumes timely access, clinic review of medical content, and approvals. Search movement is measured and reported; specific ranking or lead outcomes are not guaranteed.

The kickoff closes decisions, access, and the first two-week work queue.

Decisions for Dr. Farooqui

1. Name the top three priority services for the next 90 days.
2. Choose the first service for the paid landing path.
3. Confirm whether the website form or Boulevard becomes the booking path.
4. Confirm the monthly Google media budget separately from the retainer.
5. Name the clinic reviewer for medical and outcome language.

Access for Momentum

1. SiteGround and WordPress
2. Domain and DNS registrar
3. Google Business Profile manager
4. Search Console, GA4, and Tag Manager
5. Google Ads with client billing
6. Approved brand photos and assets
7. Boulevard, if selected

WEEKLY REPORTING

One page, four views: work completed; website and Search Console movement; Maps and Business Profile movement; AI visibility and paid media results. Consultation reporting stays privacy-safe and separates volume from fit.

First 14-day definition of done

- Access and ownership map complete.
- Backup and rollback route documented.
- Owned measurement baseline connected.
- Priority-service map approved.
- First fixes and first landing brief accepted.

Working cadence

- One relationship owner and one delivery owner.
- One review queue for site and medical content.
- Weekly progress report.
- Monthly strategy review.
- Written approval for additional cost or spend.

The first win is not more activity. It is a clean operating system that lets every page, listing, ad, and report reinforce the same physician-led promise.
