

GT Clinic website and keyword audit

Current public evidence confirms a real service footprint. The next gains come from clear page ownership, verified conversion measurement, and physician reviewed pages, not generic content volume.

What is already covered

Search results surface the homepage, FAQ, contact, Cherry Hill, Moorestown, and Voorhees location pages, plus pages for hyperpigmentation, scars, microneedling, laser vein removal, hair restoration, and the two GT Restore intimate wellness services. The homepage also presents aesthetic and functional medicine, with a physician-led consultation path.

Retrieval limitation

SiteGround powCaptcha returned HTTP 202 for every direct page, sitemap, robots, and WordPress API request. This blocks a fresh source-level crawl and means current H1s, canonicals, meta descriptions, schema, internal paths, duplicate content, page count, and performance are unverified. It does not prove Google or Bing access is blocked.

A dated 21 August six-template sample found canonicals, descriptions, and JSON-LD on each sampled template, with homepage H1 count zero and blog H1 count two. Revalidation is required before calling those current defects.

Priority findings

1. Verify robots, sitemap, WAF policy, indexed URLs, and real crawler access in Search Console and host logs.
2. Confirm contact-form completion, referral source capture, service interest, and confirmation behavior before Ads or conversion reporting.
3. Choose one clinic-approved functional medicine priority for a dedicated physician-reviewed decision page.
4. Confirm one canonical destination for Botox/Xeomin, fillers, laser hair removal, biostimulators, and GT Restore Lift.
5. Replace the current Voorhees slug-style result title with a natural, supported local title.
6. Make nearby location pages materially distinct, then remove any unsupported nearest or closest claim.

Coverage gaps to resolve

Cluster	Current evidence	Classification	Action
Functional medicine, Marlton	Homepage is broad	Thin existing coverage	Choose one clinic priority and create a reviewed decision page.
Sleep, gut, metabolic, inflammation consultation	Named on homepage	Dedicated pages unverified	Verify sitemap before publishing pages for approved priorities.
Botox/Xeomin, fillers, laser hair removal, Radiesse	Visible in service menus	Canonical pages unverified	Confirm one destination and connect FAQ and locations.
Microneedling, hyperpigmentation, scars, laser veins	Dedicated indexed pages	Existing coverage	Protect and refresh with reviewer, sources, and links after source inspection.
Hair restoration and intimate wellness	Dedicated indexed pages	Existing coverage	Protect, validate sensitive-health wording, and retain private consultation CTA.
Cherry Hill, Moorestown, Voorhees	Dedicated indexed pages	Thin local differentiation	Use verified travel facts and unique supported local context.
Physician-performed aesthetics	Homepage and FAQ support it	Thin entity distribution	Refresh expert page and link it from every high-intent service page.

This is not a volume, ranking, competitive, or conversion forecast. No Search Console, GA4, Business Profile, booking, or Ads data were used.

30 / 60 / 90

Window	Deliverable	Validation
Days 1–30	Access, sitemap export, crawl up to 80 pages, conversion path test, Voorhees title repair, two page briefs.	Search Console, host and source HTML readback.
Days 31–60	Two physician-reviewed pages, one functional or consultation priority and one aesthetic decision page.	Internal links, reviewer/date, sources, valid schema where appropriate.
Days 61–90	Two more pages only where Search Console or consultation evidence supports the gap; improve location differentiation.	Indexed pages, impressions, queries, Maps signals, privacy-safe consultation milestones.

Source record

Current public search results reviewed 12 September 2026; direct HTTP and in-app browser checks returned the SiteGround challenge; local GT strategy, evidence scope note, and dated 21 August evidence ledger consulted. No site, account, campaign, email, or Slack change occurred.
