WHAT MATTERS

Most markets generated affordable traffic. The next gains come from protecting the strongest market patterns and tightening the few expensive pockets.

Spend followed the markets generating the most traffic.

Seven active markets plus a small paused-period residual in Boca Raton.

Three markets set the efficiency bar.

Strong click-through rates paired with low average CPC.

**31 clicks from 2,000 impressions
on \$78.97 of spend**

NEXT REVIEW

- 1 Inspect traffic quality and location relevance
- 2 Compare asset and audience signals with the efficient markets
- 3 Check the landing path for friction before recommending spend changes

Traffic is clear. Outcome measurement needs validation.

A clean measurement layer is required before outcome claims or budget decisions.

CURRENT STATUS

Conversion reporting is pending validation.

01

Define

Confirm the named primary actions and attribution settings.

02

Validate

Check tag health, latency, and duplicate or secondary events.

03

Reconcile

Match platform events to qualified downstream outcomes.

Protect the winners. Diagnose the outlier. Fix measurement.

PROTECT**Keep efficient markets stable**

Preserve the market patterns producing strong CTR and low CPC while monitoring delivery.

DIAGNOSE**Review Coral Springs**

Inspect traffic quality, assets, audience signals, and landing-path friction before changes.

MEASURE**Complete outcome validation**

Confirm named actions and reconcile platform events with downstream business outcomes.

SEPARATE**Keep client evidence clean**

Maintain a Replenish-only reporting layer and a clean client evidence boundary.
