

AI SEARCH SNAPSHOT · MOMENTUM AI

faganpainting.com

Can the systems that write AI answers read this site, and do they know what the business is? Observed from outside, one fetch per crawler identity, nothing estimated.

PENDING ACCESS

4

NOT OBSERVED

IN THIS SNAPSHOT

- 01 What the site says it is
- 02 Who can read it
- 03 Findings
- 04 What this does not do

01 What the site says it is

TITLE	(not read)
H1	(none)
ENTITY TYPES	(none)
CANONICAL	(none)
LANG	(none)

02 Who can read it

5 IDENTITIES

FETCHED AS	STATUS	CHALLENGE	BYTES
browser	202	siteground	168
googlebot	202	siteground	168
gptbot	202	siteground	168
perplexitybot	202	siteground	168
claudobot	202	siteground	168

● FIX FIRST

Verified now

Host bot challenge (siteground) intercepts every identity tested, including a plain browser

FIX

Crawlers that do not run JavaScript never get past a meta-refresh challenge. Confirm in the host's bot-protection settings which AI crawlers are allowlisted, and check server logs for GPTBot, PerplexityBot and ClaudeBot hits and their status codes. Google Search Console is the authority for Googlebot.

```
{"browser": {"status": 202, "challenge": "siteground"}, "googlebot": {"status": 202, "challenge": "siteground"}, "gptbot": {"status": 202, "challenge": "siteground"}, "perplexitybot": {"status": 202, "challenge": "siteground"}, "claudebot": {"status": 202, "challenge": "siteground"}}
```

● FIX FIRST

Not observed

Whether real AI crawlers can read the homepage cannot be determined from this network

FIX

Re-run from a second network, or read the host's bot-protection allowlist and server logs.

```
{"reason": "browser identity was challenged too; AI-crawler blocking and IP-level challenge are indistinguishable here"}
```

● FIX FIRST

Not observed

robots.txt sits behind the siteground challenge from this network (status 202)

FIX

Read it from a browser or a second network; the AI-crawler policy cannot be assessed until then.

● **FIX FIRST**

Not observed

Homepage could not be read by a browser or Googlebot from this vantage point

FIX

Verify from a second network before concluding anything about the page.

```
{"browser": 202, "googlebot": 202, "gptbot": 202, "perplexitybot": 202, "claudebot": 202}
```

● **FIX NEXT**

Not observed

Sitemap sits behind the siteground challenge from this network

FIX

Read it from a browser or a second network.

```
{"url": "https://faganpainting.com/sitemap.xml", "status": 202, "challenge": "siteground", "url_count": null, "is_index": false}
```

○ **OBSERVED**

Pending access

Search Console: indexing status, rich-result types, crawl errors

FIX

Needs Search Console access. Until then this stays pending, not assumed.

○ **OBSERVED**

Pending access

What ChatGPT, Perplexity or AI Overviews say about the business

FIX

Human-run 20-question baseline on two named engines, recorded with date, engine, query and citations. Never scraped.

○ **OBSERVED**

Pending access

Referral traffic from AI surfaces

FIX

Needs analytics access.

04 What this does not do

What this does not do. It does not score, rank, or predict. It does not scrape any AI engine. What ChatGPT, Perplexity or AI Overviews actually say is observed by a person, twenty frozen questions on two named engines, recorded with date and citations, as the first step of the AI Search Readiness sprint. Anything marked pending stays pending until access exists.
