

BAR CRAWL USA

REVISED SEASONAL GROWTH PLAN

Bar Crawl USA

New October + December 2026 event growth system

Prepared for Dillon Mohr | Momentum 360 | Communication review: July 26 - August 9, 2026

REVISED

The prior plan leaned too heavily on August maintenance. This version converts Andy's seasonal concern into two concrete revenue sprints for 12 October events and 12 December events.

BOTTOM LINE

Executive correction

Andy has not received a complete October and December growth plan. He received the July recap and a condensed August SEO queue on August 3. The deeper Gmail and Slack review shows that the retention opportunity is a seasonal activation model: prepare before demand, spend only around confirmed ticket windows, and prove value by city and event.

RECOMMENDED POSITION

Do not sell more generic SEO. Offer two defined seasonal growth sprints: Halloween from September 21 through October 31, and Ugly Sweater from October 26 through December 19. Use the existing 24 event listings, add net-new conversion modules, build city-level Google Search campaigns, activate Andy's real media, and report ticket-path performance.

CLIENT	Bar Crawl USA / Andy Zirger
SYSTEM	October Boos & Booze + November runway + December Ugly Sweater growth program
STATUS	Amber: relationship is positive; expense timing, proof, and seasonal capacity are the objections.
FOUND	12 confirmed October listings, 12 confirmed December listings, real event media, no July ad spend, and no verified GA4/GSC result set in the client report.
CHANGED	Replaced the maintenance-led recommendation with new conversion, Google Ads, creative, lifecycle, partner, and measurement deliverables.
NEEDS APPROVAL	Event source of truth, two date corrections, seasonal scope, Google Ads budget, ticket URLs, media rights, email/SMS access, and any net-new page builds.
NEXT MOVE	Approve the seasonal sprint by August 14; fix source data and tracking before campaign production.

TWO-WEEK EMAIL + SLACK ANALYSIS

What the latest communications actually say

The communication record points to a timing and business-proof problem, not a quality problem. Andy praised Dillon, said he does not want the relationship to end, and identified Halloween and Taco & Tequila as the periods when business spikes. The right response is a seasonal operating model with exact deliverables and proof, not a defense of continuous activity during downtime.

Jul 27	Slack + Gmail	The team committed to evidence-led priorities: historical GSC/analytics winners matched to live 2026 inventory, Halloween first, then December Ugly Sweater.	Use demand and ticket readiness to rank markets. Do not spread budget evenly or recommend unapproved cities.
Jul 28-31	Slack	July work covered 12 existing Boos & Booze pages. No new pages were created. Net-new landing pages were quoted at \$100 each and require approval. July on-page SEO was \$450.	The new plan must distinguish existing-page activation from separately priced new URLs.
Aug 3	Gmail + Slack	Dillon sent the July report and an August ten-page evergreen SEO plan to Andy and team.	A seasonal October/December growth plan was not sent.
Aug 4	Gmail	Andy praised Dillon, said he does not want the partnership to end, and requested a pause because events are quiet until October and expenses are under review.	Treat the pause as a seasonal budget decision. Re-engage around confirmed demand windows.
Aug 4	Slack	Dillon identified 12 October events, no November events, and 12 December events, with November as the runway. Mac said the report lacked actual GA4/GSC metrics.	November should be a production and audience-building month, not an event month. Reporting must show outcomes by URL and city.
Aug 5	Gmail	Andy confirmed Facebook albums for almost every event, videographer coverage for big events, and at least one reel for every theme via Facebook, Instagram, or Dropbox.	There is enough real media to build a local proof and creative system without a new shoot as the default.
Aug 5-6	Gmail	Mac proposed a September pause while planning fall campaigns. Caroline requested a card update for \$450 monthly invoices plus Google Ads.	Keep planning and billing separate. Any seasonal production, ad management, and media scope must be explicit.

ACCOUNT READ

Andy is not asking for more activity. He is asking for value when demand is real. The strongest retention offer is a measurable seasonal sprint with a clear start, stop, budget, and ticket-sales reporting model.

LIVE-SITE SOURCE OF TRUTH

Verified 2026 event inventory

The official Bar Crawl USA event inventory currently shows 12 October Boos & Booze listings and 12 December Ugly Sweater listings. These 24 live listings should be the campaign destinations unless Andy approves a canonical replacement. Duplicate city/event URLs should not be created simply to increase page count.

Halloween - Oct 24	Cincinnati; Portland, ME; Cleveland West Park; St. Pete; Columbia; Greenville; Birmingham	7
Halloween - Oct 31	Sarasota; Roswell; Lakewood; Macon; Atlanta Beltline	5
Ugly Sweater - Dec 5	Cincinnati; St. Pete	2
Ugly Sweater - Dec 12	Lakewood; Roswell; Sarasota; Greenville; Columbia; Birmingham; Atlanta Beltline; Portland, ME	8
Ugly Sweater - Dec 19	Alpharetta; Macon	2

Launch blockers visible on the public site

Birmingham Boos & Booze	Start year displays as 2065 while the end year is 2026.	Andy confirms the authoritative 2026 date/time and ticket destination; correct event source data, structured data, and page copy.
Portland Ugly Sweater	Start and end year display as 2065.	Andy confirms December 12, 2026 facts; correct the event record before Google Ads, email, social, or schema activation.
Holiday Bar Party Bus	The page has a valid offer structure, but current 2026 ticket dates and single-ticket inventory are not established in the reviewed record.	Hold out of the December media plan until dates, pickup model, capacity, and ticket link are approved.
Onesie Bar Crawl	Theme page exists, but no confirmed October/December inventory appears in the reviewed communications.	Do not include in seasonal spend without a live, approved event and ticket path.

INVENTORY RULE

Use only live, Andy-approved event records. Never invent prices, venue partners, capacity, discounts, or scarcity. Any urgency copy must come from a real deadline or confirmed ticket availability.

NOT A REPEAT OF JULY OR AUGUST MAINTENANCE

What is genuinely new

July already delivered on-page optimization across the 12 Halloween event pages. The value now must come from converting those pages into a repeatable event acquisition system and building the December program early enough to capture demand.

24 event activation kits	One conversion package for each of the 12 October and 12 December live listings: campaign-matched hero, city/date proof, primary ticket CTA, ticket-includes block, local photo strip, partner section, FAQ, mobile sticky CTA, UTM-ready links, and sold-out/waitlist state.	July focused on SEO fields and supporting copy. This adds a conversion and campaign layer to each live event page.
2 seasonal campaign hubs	One 2026 Halloween discovery hub and one 2026 Ugly Sweater discovery hub with date/city filters, clear ticket paths, city clustering, and internal links to all approved events.	Builds a high-intent discovery path across markets instead of isolated pages.
Google Search campaign system	Separate city/date campaign groups for October and December; brand/theme protection; exact and phrase keyword sets; negatives; location targeting; sitelinks; callouts; image assets; and a controlled test budget.	No July Google Ads spend occurred. This is a net-new paid acquisition system.
Real-media production kit	Select city-specific album proof, create one local image set per event, produce theme reel cutdowns and city end cards, and export 1:1, 1.91:1, and 9:16 assets for approved organic and Google placements.	Uses Andy's existing albums, reels, and videographer footage as first-hand proof.
Lifecycle sequences	Season launch, city announcement, social proof, group-plan reminder, final deadline, day-of logistics, post-event recap, and October-to-December cross-sell across approved email/SMS systems.	Adds owned-audience revenue and makes November productive without inventing an event.
Partner promotion kit	Per-city link, QR code, approved event copy, story tile, square graphic, and venue posting calendar for participating bars and local partners.	Creates coordinated local distribution instead of relying only on BCUSA channels.
Revenue measurement	GA4/GTM event map, cross-domain checkout review, UTMs, Google Ads conversions, city dashboard, weekly budget reallocation, and month-end source/market summary.	Closes the exact proof gap Mac identified in Slack.

NEW-PAGE RULE

All 24 seasonal event listings already exist. Create a new URL only when a confirmed event lacks a usable canonical page or a unique search intent cannot be served by the current architecture. Each net-new page remains a separate \$100 approval; duplicate pages are not recommended.

SEPTEMBER 21 - OCTOBER 31

October Halloween growth sprint

The October program should be built around two event cohorts, October 24 and October 31, with city-level control. All 12 markets receive page activation and measurement; paid priority is based on ticket readiness, historical demand, conversion data, and available budget, not an equal split.

Aug 10-14	Approval + data	Lock 12-event source of truth, ticket URLs, offers, venues when known, media rights, budget, and checkout domains. Repair Birmingham 2065 issue.	Approved inventory and launch-blocker log.
Aug 17-28	Conversion build	Add the reusable event activation module to 12 Halloween listings; build 2026 Halloween hub; implement mobile CTA and UTM link map.	12 campaign-ready pages plus one discovery hub.
Aug 17-28	Creative build	Select 3-5 real photos per city, create 12 city image sets, cut one master Halloween reel into city editions, and prepare partner kits.	Approved October asset library.
Sep 8-18	Tracking + prelaunch	Test GA4/GTM ticket click, checkout start, and purchase where available; build city campaigns, ad assets, negatives, schedules, and dashboard.	Signed prelaunch QA and tested conversion path.
Sep 21-Oct 11	Launch + learn	Launch high-intent Google Search by city/date; start email/SMS announcement and social-proof sequence; use 70% proven allocation and 30% controlled tests.	First conversion data and market ranking.
Oct 12-23	Scale first cohort	Move budget to markets with ticket-ready traffic and acceptable cost per ticket action; release partner reminders and deadline creative.	Oct 24 market push.
Oct 24-31	Event + second cohort	Close first cohort, retain learnings, shift only approved spend to Oct 31 markets, run final logistics and last-chance messages, and capture event media.	Event results plus December audience seed.

Google Search architecture

City-event	One campaign or tightly controlled group by city and event date; exact and phrase intent; city and nearby-radius targeting.	Halloween bar crawl Cincinnati; bar crawl October 24; CTA: Get Cincinnati Tickets.
Theme / brand	Protect Bar Crawl USA and Boos & Booze terms; route city modifiers to exact event pages.	Boos and Booze tickets; Bar Crawl USA Halloween; CTA: Choose Your City.
Returning demand	Use Google audiences in observation first; apply RLSA/customer match only with valid consent and sufficient list size.	Returning event-page visitors searching again; CTA: Finish Getting Tickets.
Exclusions	Remove irrelevant employment, free-only, unrelated crawl, and non-market queries. Exclude converted users from prospecting where purchase data is reliable.	Protect spend and avoid duplicate acquisition.

OCTOBER 26 - DECEMBER 19

December Ugly Sweater growth sprint

November has no confirmed event inventory in the reviewed communications. That is useful: it becomes the full runway for December demand. The December system should reuse October infrastructure, retarget eligible October audiences, and divide spend across December 5, 12, and 19 cohorts.

Oct 26-30	Inventory + repair	Lock all 12 Ugly Sweater events, dates, ticket links, and city facts. Correct Portland's 2065 source record before any campaign uses it.	Approved December event map.
Oct 26-Nov 6	Conversion build	Activate 12 December pages; build 2026 Ugly Sweater hub; add group-plan, ticket-includes, photo proof, FAQs, and city-specific CTAs.	12 campaign-ready pages plus hub.
Nov 2-13	Creative system	Select Ugly Sweater proof from Andy's albums, produce 12 city image sets, one master reel with city/date end cards, and partner distribution packs.	Approved December asset library.
Nov 2-13	Campaign build	Create Google Search groups by Dec 5, Dec 12, and Dec 19 cohorts; validate negatives, locations, ad assets, UTMs, and conversion actions.	Campaigns pass prelaunch QA.
Nov 9-29	November runway	Run launch, social proof, group-plan, and reminder sequences; publish city partner assets; retarget eligible October visitors and purchasers with a December message.	Audience growth and first ticket-path data.
Nov 23-Dec 4	Scale Dec 5	Move spend to qualified Dec 5 markets; use real deadlines only; prepare day-of logistics and customer service routing.	Cincinnati and St. Pete push.
Dec 5-12	Scale Dec 12	Shift budget from completed events to approved Dec 12 markets; release fresh local proof and partner reminders.	Eight-market Dec 12 push.
Dec 13-19	Final cohort	Concentrate eligible spend and lifecycle activity on Alpharetta and Macon; close with post-event recap and list-growth capture.	Season closeout and spring seed list.

NOVEMBER REVENUE RUNWAY

Owned-audience sequence

November should carry the December launch even though no November events are confirmed. Segment every approved send by city when possible, use verified event facts, and connect October attendees to the relevant Ugly Sweater event without inventing a discount.

1. Season launch	Announce confirmed cities and dates; segment by market where possible.	Find My City
2. City launch	Send the exact event, date, and ticket inclusion to local subscribers.	Get [City] Tickets
3. Proof	Use real album photos, prior attendance proof when verified, and event experience details.	See What Is Included
4. Group plan	Encourage friends to coordinate without inventing a discount.	Send This to Your Group
5. Deadline	Use only a real price deadline, availability threshold, or event cutoff.	Get Tickets Before [Real Deadline]
6. Logistics	Provide registration, time, route, ID, and support details approved by Andy.	View Event Details
7. Cross-sell / recap	Invite October attendees into the December event in their market and reuse approved post-event proof.	Join the Holiday Crawl

LIFECYCLE RULE
Email and SMS are not a substitute for consent or attribution. Confirm the sending platform, list owner, segmentation, suppression logic, and UTM standard before the first launch message.

USE THE ASSETS ANDY ALREADY HAS

Creative and local distribution system

Andy has already removed the largest creative blocker: Bar Crawl USA has Facebook albums for almost every event, videographer coverage for major events, and at least one reel for each theme. The new work is to turn that archive into a controlled city-level production system with documented usage rights.

City proof sets	12 city folders, each with 3-5 approved event photos, one hero crop, one group/social-proof crop, and one Google image asset crop.	Use the correct market whenever possible; label event, city, date, owner, and approval status.
Theme video	One Halloween master cut and one Ugly Sweater master cut, each with 12 city/date end-card versions and 9:16 captions.	Lead with event energy in the first 3 seconds; do not overstate attendance or inclusions.
Copy matrix	Four approved angles per season: city/date direct response, experience/inclusions, group night out, and real social proof. Localize headlines and CTAs for each event.	Test hook first, then headline, benefit, CTA, and proof point. Change one primary variable at a time.
Partner kit	One square tile, one story tile, one QR code, one short caption, one long caption, ticket URL, and posting dates per city.	Every QR and link carries event, city, source, medium, and partner UTMs.
Event capture brief	One repeatable shot list for registration, crowd, partner bars, DJs, branded items, group reactions, ticket experience, and vertical testimonials.	Capture consent and rights; upload within 48 hours so one event can improve the next cohort.

Direct-response copy starting points

Google headline	Halloween Bar Crawl [City] [Date]
Google headline	Get Your Bar Crawl Tickets
Google description	Join Bar Crawl USA in [City] on [Date]. See what is included and get tickets.
Page hero	[City] Boos & Booze Halloween Bar Crawl - [Date]
Page CTA	Get [City] Tickets
December hero	[City] Ugly Sweater Bar Crawl - [Date]
Partner CTA	Scan for Official Event Details + Tickets

CREATIVE GUARDRAIL
The content archive is a major advantage, but each asset still needs city accuracy and reuse approval. Avoid generic stock imagery when real event proof is available.

CLOSE THE PROOF GAP

Measurement, testing, and reporting

Mac's clearest criticism was that the report lacked actual GA4 and GSC metrics. The seasonal plan must start with a tested event map and end with a city-by-city ticket-path report. If checkout occurs on another domain, ticket clicks and checkout starts must be separated from verified purchases.

GA4 / GTM	Track season hub views, event page views, ticket CTA clicks, email/SMS clicks, partner QR visits, checkout starts, and purchases only where technically verified.	Users, engaged sessions, ticket actions, purchase count/value where available, and conversion rate by city/page/source.
Google Ads	Link GA4, enable auto-tagging, validate primary and secondary conversions, add negatives, location targeting, ad assets, and audience observation.	Spend, impressions, clicks, CTR, CPC, ticket actions, purchase conversions, CPA/ROAS where verified, search terms, and market reallocation.
GSC	Baseline every hub and event URL: clicks, impressions, CTR, position, queries, and indexing status.	URL/query movement and index state. Keep organic proof separate from paid outcomes.
Checkout	Map the destination domain and ticket platform. Test cross-domain attribution; preserve source/medium and transaction ID if supported.	Verified purchases versus outbound ticket clicks; no purchase claim from a click-only event.
Lifecycle	Apply campaign/source/market tags to email and SMS links; preserve consent and suppression rules.	Sends, delivery, clicks, unsubscribes, ticket actions, and revenue only where attribution is verified.

Budget and testing rule

- Use 70% of spend on proven, ticket-ready markets and 30% on controlled tests. Re-rank weekly; do not split evenly across 12 cities by default.
- Test hook/intent first, then headline, benefit, CTA, and proof. Keep one primary variable per test.
- Add audiences in observation first. Use returning-visitor or customer-match targeting only with valid consent and adequate list size.
- Use a real conversion test before launch. Confirm mobile speed, CTA visibility, dates, ticket destination, UTMs, budget, schedule, targeting, and dashboard.

WEEKLY PROOF

Client-ready dashboard

The dashboard should answer three questions every week: which city is creating qualified ticket demand, which channel or asset is driving it, and what action should change next. Keep verified purchases separate from outbound ticket clicks.

Executive	October and December spend, verified purchases/revenue where available, ticket actions, CPA, and decision.
Market	One row per city/event: date, page, spend, clicks, ticket actions, verified purchases, CPA, organic clicks, and status.
Creative	Winning angle, asset, search term, CTR, conversion rate, and next test.
Operations	Date errors, ticket-link issues, sold-out states, venue changes, tracking failures, and owner.
Next move	Budget shift, page change, audience action, lifecycle send, partner reminder, or pause.

REPORTING STANDARD

Every weekly update follows the same structure: Client, System, Status, Found, Changed, Needs Approval, and Next Move. Include a URL/market table and label every metric as verified, directional, or unavailable.

DECISION-READY NEXT MOVE

Approval sheet and handoff

The recommended offer is a seasonal growth sprint, not an open-ended retainer promise. The work is bounded by confirmed events, launch dates, source-of-truth approvals, and measurable ticket outcomes.

1	October + December inventory	Approve the 12 Halloween and 12 Ugly Sweater listings as the only campaign inventory, subject to event changes.	Campaigns point to stale or unapproved events.
2	Date corrections	Correct Birmingham Halloween and Portland Ugly Sweater from 2065 to the confirmed 2026 dates in source data, page copy, and schema.	Trust, indexing, ad disapproval, and attribution risk.
3	Ticket facts	Approve exact ticket URLs, inclusions, prices, deadlines, venue facts, capacity, and sold-out behavior for every market.	Landing page and ad promises cannot be validated.
4	Seasonal scope	Approve 24 existing-page activation kits, two seasonal hubs, Google Search production/management, creative localization, partner kits, lifecycle setup, and reporting.	The plan collapses back into generic page maintenance.
5	Budget + launch	Approve Google Ads budget and Sep 21 Halloween / Oct 26 Ugly Sweater activation checkpoints. Rank markets instead of equal allocation.	Insufficient learning time or diluted spend.
6	Media + rights	Share Dropbox and confirm reuse/cropping rights for albums, reels, and videographer footage by city and theme.	Creative production lacks local proof.
7	Email/SMS + consent	Identify platforms, list owners, segmentation, consent, and suppression rules before lifecycle sends.	Compliance and attribution risk.
8	New URLs	Approve only genuine URL gaps at \$100 per page. Do not create duplicates for the 24 existing listings.	Wasted budget and search cannibalization.
9	Optional holiday themes	Keep Holiday Bar Party Bus and Onesie outside the plan until 2026 dates, capacity, and ticket paths are confirmed.	Budget is spent against non-launchable inventory.

RECOMMENDED NEXT MOVE

Use this revised plan for the August 10 call. Ask Andy to approve the inventory, date repairs, ticket source of truth, media access, and seasonal scope by August 14. Then baseline tracking before any page or campaign production. Do not send the prior August-only report to Andy as the final game plan.

INTERNAL HANDOFF

Final status

CLIENT	Bar Crawl USA / Andy Zirger and Caroline Zirger
SYSTEM	Seasonal event acquisition: existing pages, Google Search, owned audience, creative, partners, and measurement
STATUS	Revised and decision-ready; not yet sent to Andy.
FOUND	Positive relationship; seasonal budget objection; 24 live event listings; strong first-hand media archive; two public date defects; missing performance proof.
CHANGED	Added exact new October and December deliverables, November runway, campaign architecture, creative outputs, lifecycle touches, partner distribution, and reporting.
NEEDS APPROVAL	Nine approvals above.
NEXT MOVE	August 10 decision call, August 14 approval target, September 21 Halloween activation, October 26 Ugly Sweater activation.

EVIDENCE REVIEWED

Source record

- Gmail: Bar Crawl USA | July recap and August SEO plan, August 3-5, 2026. Confirmed what was sent, Andy's praise and pause request, media availability, Mac's September pause/fall planning direction, and the August 10 call.
- Gmail: Bar Crawl USA next 10 SEO pages, July 27-30, 2026. Confirmed the August evergreen scope and no August ad recommendation in that thread.
- Gmail: Bar Crawl USA August search and event priorities, July 27, 2026. Confirmed the live Boos & Booze page as the Halloween source of truth.
- Gmail: CC Change, August 5-6, 2026. Confirmed the \$450 monthly invoice plus Google Ads billing-card request and Mac's secure update path.
- Slack: #bar-crawl-usa, July 27-August 5, 2026. Confirmed existing-page work, no new July pages, \$100 net-new-page approval, \$450 July on-page SEO, 12 October events, no November events, 12 December events, the November runway idea, and the GA4/GSC gap.
- Official site: <https://barcrawlusa.com/bar-crawl-usa-events/> and <https://barcrawlusa.com/ugly-sweater-bar-crawl/>. Verified the current 12 October and 12 December listings and visible 2065 date defects.
- Official site: <https://barcrawlusa.com/holiday-bar-party-bus/> and <https://barcrawlusa.com/onsie-bar-crawl-2/>. Verified the theme pages exist; current 2026 seasonal inventory still requires approval before inclusion.
- Official BCUSA brand asset: https://barcrawlusa.com/wp-content/uploads/2024/02/BCUSA_LetterLOGO2-scaled.webp.

Evidence limitation: No live GA4, Google Ads, GSC, ticket-platform, or email/SMS export was included. Performance claims remain provisional until baseline and checkout attribution are verified.

Confidential Momentum 360 working document for scope and decision control before client-facing commitments.
