

PAID PILOT PROJECT · DISCOVERY AND STRATEGY DRAFT

Custom Home Builder Authority Hub

A concise research, keyword, architecture, technical SEO, AI-search, and roadmap package for review before expert validation or WordPress implementation.

This is not the final presentation or a publication-ready content package.

The keyword research and public-site analysis are complete. The content drafts remain provisional until Janice's interview, factual review, and verified WordPress staging QA.

STATUS AND SCOPE

What is ready, what is provisional, and what still needs a human.

The package is useful now for a working session. It should not be presented as fully complete, accepted, implemented, or published.

Ready for review

- Public-site and page inventory
- Competitor pattern review
- 62-row Semrush keyword map
- Authority architecture
- Technical and AI-search work order
- 90-day and 12-month roadmaps
- Janice interview guide

Working drafts

- Authority pillar copy
- Two supporting articles
- FAQ set and schema graph
- WordPress metadata
- Internal-link recommendations

These are source material for review, not approved client voice or final publish copy.

Not completed

- Janice SME interview
- SME factual approval
- Verified WordPress role and staging target
- Implementation and production QA
- Publication and final acceptance

The right next milestone

Use this report to align on the direction, then conduct the 60-minute SME interview. Final copy and any publication decision come after that review.

EXECUTIVE RECOMMENDATION

Keep the existing builder URL. Give it a clearer job.

Evolve **/marketing-agency-for-builders/** into the authority hub instead of launching a second page that competes for the same topic.

2,057

visible words in the August 3 public inventory

43

H1-H3 headings detected

83

internal-link instances

34

images, with two missing-alt cases

Why preserve it

- It already contains builder-specific proof and established internal links.
- A second core URL would introduce avoidable cannibalization risk.
- The existing page can become a clear root for strategy, visibility, website conversion, proof, and measurement.

What should change

- Lead with the custom-home-buyer decision journey.
- Replace tactic inventory with a practical growth blueprint.
- Add direct answers, visible sourcing, expert review, and purposeful internal links.
- Measure qualified conversations, not traffic alone.

Central promise

Help the right homeowner understand a builder's fit, process, proof, and next step before another builder earns the call.

Source: live public page inventory and single Lighthouse lab captures, August 3, 2026. Lab data is diagnostic and is not field Core Web Vitals.

MARKET POSITION

The opening is not a longer service list. It is a clearer decision system.

The reviewed agencies commonly claim builder specialization. BigOrange can differentiate by connecting buyer trust, search visibility, content production, and lead quality in one understandable plan.

PATTERN	WHAT THE MARKET ALREADY SHOWS	BIGORANGE OPPORTUNITY
Specialization	Builder expertise and long sales cycles are common positioning themes.	Put the homeowner's decision journey first and show how the system works.
Proof	Case metrics, reviews, awards, and former-builder credibility appear frequently.	Use approved proof with source, starting point, work, timeframe, and result.
AI search	Current agencies discuss AI visibility, often with aggressive claims.	Use source-backed guidance and no guaranteed placement language.
Resources	Large content libraries signal authority but can become generic.	Turn each SME interview into a small, validated cluster with a clear reader job.
Lead volume	Traffic and lead-count language dominates.	Own the quality-of-lead conversation: fit, market, project type, readiness, and sales acceptance.

White-space position

A warm, practical builder-marketing guide that shows its work, explains AI search without magic, and connects visibility to qualified demand.

Directional public-page review: BigOrange, Diamond Group, Lasso Up, OuterBox, Savo Group, Red Olive, and BuilderKick. Public positioning is not proof of private performance.

SEMRUSH KEYWORD PRIORITIES

Lead with accessible builder-specific demand.

The validated map contains 62 selected, mapped, deferred, and rejected decisions. These ten directions create the strongest first build sequence.

#	QUERY	US VOL.	KD	RECOMMENDED ASSET
1	SEO for home builders	590	2%	Subpillar
2	custom home builder marketing	480	9%	Authority pillar
3	home builder website not generating leads	880	4%	Supporting article
4	custom home builder target market segments	1,000	17%	Supporting guide
5	home builder marketing	1,000	28%	Category expansion
6	home builder website design	480	15%	Service support
7	home building marketing	390	12%	Map to pillar
8	home builder digital marketing	320	23%	Subpillar
9	home builder marketing plan	320	15%	Guide and template
10	home builder marketing ideas	320	19%	Supporting article

Recommended wedge

Pair “SEO for home builders” with the existing builder authority page, then support the cluster with website-conversion, audience-strategy, and local-visibility content.

Source: authenticated Semrush, United States desktop database, checked August 4, 2026. Volume, KD, intent, and CPC are directional research inputs, not traffic or ranking guarantees. The attached CSV preserves all 62 decisions.

AUTHORITY ARCHITECTURE

One hub organizes three buyer decisions.

Every new asset should answer a specific question and link back to one authority root. No duplicate core pages. No content confetti.

Authority hub	Custom Home Builder Marketing: positioning, website trust, visibility, proof, measurement, and the next right step.
Strategy	Buyer journey, target market, marketing plan, referral dependence, and lead quality.
Search and AI	SEO for home builders, local visibility, answer-ready content, citations, entities, and AI discovery.
Website conversion	Required website elements, proof architecture, project stories, process clarity, accessibility, speed, and measurement.
Proof layer	Approved case stories, reviews, awards, FAQs, checklists, and a future benchmark with explicit methodology.

Drafted now

- One provisional authority pillar
- Two provisional supporting articles
- Eight FAQs and a proposed schema graph

Planned next

- Three subpillars and nine supporting articles
- Downloads and case-study intake
- Webinar and benchmark concepts remain later-phase opportunities

TECHNICAL AND AI-SEARCH WORK ORDER

Fix the critical path before adding more weight.

26

mobile Lighthouse performance

28.6s

mobile LCP lab snapshot

2,650ms

mobile TBT lab proxy

67

desktop performance

1. **Find the real mobile LCP element and request chain.** Do not guess from the score alone.
2. **Remove hero video, carousel, or heavy background media from the critical path.** Use a lightweight poster first.
3. **Cut unused page-builder CSS and long JavaScript tasks.** Audit sliders, animation, chat, tracking duplication, and third parties.
4. **Improve accessibility and information structure.** Preserve visible focus, semantic headings, descriptive alt text, contrast, keyboard access, and reduced motion.
5. **Make the page easy to retrieve and cite.** Use visible direct answers, stable entity details, named authorship, review dates, internal links, and structured data that matches the page.
6. **Re-test before release.** Validate mobile, desktop, forms, metadata, schema, crawl access, and rollback evidence in staging.

AI-search boundary

There is no magic tag or guaranteed answer placement. Crawl access, indexability, clear answers, reputable citations, consistent entities, and real proof are controllable inputs.

Single Lighthouse lab captures from August 3, 2026 are diagnostic, not field Core Web Vitals. Final implementation requires verified WordPress staging access.

90-DAY ROADMAP

Validate first. Publish in a controlled sequence.

01

Days 1-30

- Conduct Janice's interview and factual review.
- Apply the Semrush map to page briefs.
- Confirm WordPress role, staging target, and rollback route.
- Revise the hub and two drafts.
- Fix priority mobile and accessibility issues.
- Define qualified-demand measurement.

02

Days 31-60

- Publish only after review and approval.
- Build the three subpillar guides.
- Add local SEO, AI-visibility, and marketing-plan content.
- Connect reciprocal internal links and breadcrumbs.
- Create the first practical download.

03

Days 61-90

- Add buyer-choice, referral, and lead-quality content.
- Publish the first approved case story.
- Test one meaningful CTA hypothesis.
- Review search queries and sales feedback.
- Refresh the hub with verified evidence.

Release rule

No asset moves from working draft to published content without a named source, human factual review, editorial QA, approval record, and rollback path.

EDITORIAL WORKFLOW

One expert hour becomes a source, not a content vending machine.

AI can organize, compare, outline, and repurpose. It cannot supply BigOrange's experience, client proof, or final judgment.

- | | |
|---------------------|---|
| 1. Frame | Define the reader, decision, source boundary, and claim exclusions. |
| 2. Interview | Capture decisions, mistakes, objections, language, examples, and caveats from Janice or the assigned SME. |
| 3. Extract | Build a claim table, FAQ candidates, article angles, proof gaps, and internal-link opportunities. |
| 4. Verify | Separate firsthand expertise, approved client evidence, official guidance, and statements that still need a source. |
| 5. Draft | Create answer-first copy with explicit placeholders instead of invented expertise. |
| 6. Review | SME truth check, editorial quality check, accessibility and technical QA, approval, then publication. |

Quality floor

Direct answer, original expertise, source quality, audience specificity, internal-link value, scanability, accessibility, conversion clarity, fact-check completion, and human approval.

12-MONTH DIRECTION

Authority compounds when evidence compounds.

Quarter 1 · Foundation

Validate expertise, evolve the hub, publish the first approved cluster, fix technical priorities, and establish measurement.

Quarter 2 · Proof

Add buyer-decision content, local-market guidance, case-study intake, nurture support, and sales feedback.

Quarter 3 · Distribution

Repurpose approved expertise across email, social, briefing, and practical tools without creating channel-specific filler.

Quarter 4 · Original authority

Consolidate the cluster and publish an original benchmark only when the methodology and evidence can be shown.

Sustainable rhythm

CADENCE	RECOMMENDED OPERATING RHYTHM
Monthly	One SME session, one substantial article, one existing-page refresh, and a short FAQ batch.
Quarterly	One proof asset or briefing, one technical and accessibility audit, and one performance review.
Annually	One original research asset and a full cluster consolidation review.

North star

Become the most useful and transparent marketing resource for growth-minded custom home builders, measured by qualified demand and repeat use rather than an unprovable “number one” claim.

EVIDENCE AND LIMITS

The package shows its work and labels what it cannot prove.

BigOrange public website and builder page

Live public inventory and content review captured August 3, 2026. Public evidence does not establish private traffic, leads, rankings, conversions, or revenue.

Lighthouse lab captures

Single mobile and desktop diagnostic runs captured August 3, 2026. These are not CrUX field data or a production pass/fail verdict.

Semrush keyword research

United States desktop database checked August 4, 2026. The attached 62-row CSV preserves volume, KD, CPC, intent, selection rationale, and decision.

Competitor public pages

Diamond Group, Lasso Up, OuterBox, Savo Group, Red Olive, and BuilderKick. Used for public positioning and content-pattern comparison only.

Official technical guidance

Google Search and Core Web Vitals documentation plus current OpenAI, Perplexity, and Anthropic crawler guidance referenced in the technical source package.

Missing evidence

No Janice interview transcript, approved firsthand example, verified WordPress staging session, private analytics, CRM outcome, or final client acceptance is represented as complete.

Safe use

Use this document for discovery alignment, prioritization, and interview preparation. Do not use it as proof that final content, WordPress implementation, publication, or performance outcomes are complete.

WORKING-SESSION DECISIONS

Four decisions unlock the real final deliverable.

- 1 Confirm the authority-hub direction.**
Keep and evolve the existing builder URL, with one root page and three supporting decision paths.

- 2 Schedule Janice's 60-minute SME interview.**
Capture firsthand process, objections, proof, language, examples, and factual corrections before final copy.

- 3 Name the WordPress staging and review owners.**
Verify a role-specific, revocable access route, staging target, approval owner, technical QA checklist, and rollback path.

- 4 Define final acceptance and presentation timing.**
Confirm when the revised copy, implementation proof, and final presentation should be reviewed and accepted.

Recommended next action

Approve the discovery direction, conduct the SME interview, then revise the three working drafts before any final presentation or WordPress publication.

The full internal package includes the Semrush CSV, detailed research, technical specification, interview guide, roadmaps, and provisional WordPress drafts.
