

INTERVIEW COMMAND BRIEF + WORKING NOTES

Custom Home Builder Marketing SME Interview

Janice Weiser + Dillon Mohr

INTERVIEW	Friday, August 28, 2026 10:30-11:30 AM ET
GOOGLE MEET	meet.google.com/cxt-xaip-tqi
NEXT REVIEW	Thursday, September 3, 2026 9:00-9:40 AM ET Margee + Paula
STATUS	Private preparation packet Recording requires live consent

Outcome: capture Janice's firsthand expertise, exact language, stories, objections, process judgment, claim boundaries, and permissions so the paid pilot can move from private drafts to factually reviewed publication candidates.

This packet contains all 27 proposal interview questions, capture prompts, permission rules, the closing readback, the immediate post-interview workflow, September 3 leadership decisions, the final production sequence, and print-ready working-notes pages.

PART 1 - INTERVIEW COMMAND BRIEF

Read this section before the call and use it to pace the interview, protect the must-get outcomes, and close every valuable statement with an explicit use permission.

The assignment in one sentence

Capture Janice's real custom-home-builder expertise, exact language, stories, objections, process judgment, claim boundaries, and usage permissions so BigOrange can turn one approved SME interview into a truthful authority-page update, two supporting articles, five to eight FAQs, and a repeatable human-reviewed content system.

Why this interview matters to the paid pilot

The proposal calls the SME workflow a critical requirement. It says the one-hour Janice interview is the source material for the Custom Home Builder Marketing authority hub and the demonstration that AI can amplify human expertise without replacing it.

The interview must support these current-pilot outputs:

- the authority pillar on the existing /marketing-agency-for-builders/ URL;
- two supporting articles;
- five to eight reviewed FAQs;
- approved firsthand stories, examples, and expert claims;
- the documented transcript-to-content workflow;
- evidence that one focused SME hour can become weeks or months of useful source material with approximately two hours of editorial review;
- a final presentation explaining the workflow, decisions, scaling model, and next improvements.

Social posts, a broader downloadable guide, and a webinar outline are labeled Phase 2 in the proposal. They can be mapped from the transcript, but they are not reasons to dilute the current interview's primary source-capture job.

Current state before the call

- The Aug. 25 conversation was an orientation and website review. Dillon reported that only a few questions were touched and that Aug. 28 would be the full structured interview.
- No complete interview transcript or formal permission record is currently available. Treat all 27 questions as open unless Janice clearly reconfirms an earlier answer on the record.
- Janice received the two private WordPress directions, the two supporting drafts, the pre-interview review note, and the Aug. 25 working-session PDF.
- Private WordPress page 5546 is **Cinematic Authority**.
- Private WordPress page 5585 is **Orange Press**.
- Supporting WordPress drafts are posts 5550 and 5552.
- The public builder page has not been replaced.
- The site audit, competitor research, keyword strategy, content architecture, AI-search strategy, roadmaps, workflow documentation, private WordPress builds, checklist, and final-review candidate already exist.
- The unresolved source gate is Janice's firsthand input and factual approval. Separate unresolved release gates include final direction, approved photography, CMS settings, staging permissions, production QA, publication approval, ownership, scope, and commercial terms.

Seven must-get outcomes

If the hour becomes compressed, protect these outcomes before anything else:

1. One firsthand builder story that can be quoted or safely anonymized.
2. One recurring marketing or sales failure pattern Janice has personally observed.
3. One common buyer or builder objection and the language that resolves it.
4. A clear use permission for every valuable statement: attributable quote, paraphrase, anonymized example, internal only, or exclude.
5. Janice's definition of a qualified builder lead.
6. Five to eight FAQ answers that can be published without fabricating expertise.
7. Janice's realistic definition of a healthy first 90 days and how BigOrange should evaluate progress.

Five-minute pre-call setup

- Open this command brief.
- Open the private previews for [page 5546](#) and [page 5585](#) in background tabs.
- Open supporting drafts [post 5550](#) and [post 5552](#) only if a concrete copy question needs them.
- Open a timestamped note sheet using the capture format below.
- Keep a visible timer. Do not spend the hour presenting technical work that is already complete.
- Do not record or transcribe until Janice explicitly consents on the call.
- Do not ask for unnecessary confidential client names, addresses, budgets, metrics, or identifying details.

Opening script

Janice, thanks again. Tuesday gave us a chance to get acquainted and review the two directions. Today I want to formally capture the custom-home-builder expertise behind the work so I do not put words in your mouth. I have 27 questions grouped into seven short sections. I will keep us moving, but I may ask for a real example or the exact phrase you use with a builder. Before we start, are you comfortable with me recording and transcribing this strictly for the BigOrange pilot? For each useful story or statement, I will also confirm whether it can be quoted, paraphrased, anonymized, kept internal, or excluded. I will return the edited language for review before public use.

If recording is declined, take manual notes and mark the consent field `no recording`. Do not imply that earlier email language constituted recording consent.

Permission codes

- Q - attributable quote approved, subject to final copy review.
- P - paraphrase approved, subject to final copy review.
- A - anonymized example approved; record the required redactions.
- I - internal context only.
- X - exclude from all working and published content.
- ? - permission not settled; do not use publicly.

For any named client, metric, result, award, timeframe, or sensitive project detail, permission alone is not enough. Record the original source and verification needed.

Live capture format

For every useful answer, record:

Timestamp:
Question number:
Exact language:
Permission code:
Claim type: experience | process | outcome | opinion | example
Target asset: pillar | article 1 | article 2 | FAQ | CTA | sales sheet | case-study lead | internal
Verification needed:
Confidentiality or anonymization notes:
Follow-up owner and date:

The complete 60-minute interview

0-5 minutes - audience and stakes

Use this section to define the right reader, the buying context, and realistic expectations.

1	Which kind of custom home builder is the best fit for this guidance?
CAPTURE	project type, geography, size or maturity, sales model, values, and disqualifiers.
FEEDS	pillar audience statement, qualification language, hero copy, FAQs.

2	What is usually happening in the business when they start looking for marketing help?
PROBE	What happened right before the call? What do they say in their own words?
CAPTURE	trigger moments, pain language, urgency, and one real but anonymizable example.
FEEDS	pillar opening, CTA, buyer-state language, sales objection sheet.

3	What do builders misunderstand about the time between marketing activity and a qualified project?
CAPTURE	timing misconceptions, sales-cycle caveats, leading indicators, and claims to avoid.
FEEDS	90-day section, SEO timeline answer, measurement FAQ, final presentation.

5-15 minutes - buyer decision journey

Use this section to explain how homeowners build trust and where qualified opportunities are won or lost.

4	What makes a prospective homeowner trust one builder enough to make contact?
PROBE	Can you walk me through a real situation where trust increased or broke down?
CAPTURE	trust signals, language, process evidence, and story permission.
FEEDS	pillar trust journey, article 1, FAQ, CTA.

5

What proof do buyers look for before a consultation?

CAPTURE	project context, photography, reviews, people, process, credentials, local proof, and what is overrated.
FEEDS	proof section, imagery plan, article 1, case-study requirements.

6

Which questions do strong prospects ask, and which questions reveal a poor fit?

PROBE	What exact objection or concern do you hear, and how do you answer it?
CAPTURE	at least two strong-prospect questions, one poor-fit signal, one objection, and Janice's response language.
FEEDS	qualification FAQ, sales objection sheet, consultation CTA, article 1.

7

Where do buyers hesitate or disappear?

CAPTURE	journey stage, cause, missing information, sales follow-up dependency, and a common failure pattern.
FEEDS	website content gaps, CTA, buyer journey, measurement handoff.

15-27 minutes - positioning and referrals

Use this section to replace generic agency language with BigOrange's real point of view.

8

What makes builder positioning sound interchangeable?

CAPTURE	generic phrases, category clichés, missing proof, and examples of language to remove.
FEEDS	pillar positioning section, copy-edit list, claim guardrails.

9

How do you uncover a builder's real difference without forcing a slogan?

PROBE	Tell me about a time the real difference emerged from the process rather than the headline.
CAPTURE	Janice's method, discovery questions, approved example, and exact wording.
FEEDS	the pillar's explicit Janice review callout, workflow documentation, future discovery template.

10

When do referrals stop being a sufficient growth system?

CAPTURE	warning signs, what referrals still do well, what a broader system adds, and claims to avoid.
FEEDS	referrals section, 90-day plan, FAQ.

11

What is one mistake builders make when they try to broaden their audience?

CAPTURE	failure pattern, consequence, correction, and anonymization permission.
FEEDS	audience guidance, positioning section, sales sheet, FAQ.

27-39 minutes - website and content

Use this section to validate the page, article drafts, FAQs, proof, and imagery.

12

What must a builder website prove above the fold?**CAPTURE**

audience, geography, offer, operating difference, proof, CTA, and what should not compete for attention.

FEEDS

hero copy and the final 5546/5585 direction.

13

Which project details or photography are most persuasive?**PROBE**

Which approved client photography could BigOrange realistically use here?

CAPTURE

photo types, captions, context, permission requirements, and availability of approved project images.

FEEDS

image replacement plan, project-story template, article 1.

14

What pages or answers are almost always missing?**CAPTURE**

missing process, fit, investment, timeline, geography, people, consultation, and proof content.

FEEDS

internal-link architecture, future content calendar, article priorities.

15

What makes a builder blog useful rather than filler?**CAPTURE**

real editorial tests, poor patterns, update cadence, and how sales should use content.

FEEDS

article 2, editorial workflow, content calendar.

16

Which homeowner questions deserve a direct, public answer?**CAPTURE**

at least five publishable FAQs, Janice's concise answer to each, caveats, and review permission.

FEEDS

visible FAQ, FAQ schema, articles, AI-answer-ready passages.

39-49 minutes - search, local, and AI discovery

Use this section for audience language and category truth, not for a technical SEO presentation.

17

How do builders actually describe their markets and project types?**CAPTURE**

natural phrases, service areas, project categories, and terminology BigOrange should or should not use.

FEEDS

page headings, market language, metadata, internal anchors.

18

What local proof is both honest and useful?**CAPTURE**

real operating geography, permitting or market knowledge, project context, reviews, partnerships, and privacy limits.

FEEDS

local content rules, proof section, case-study template.

19**What would you want an AI answer engine to understand about a BigOrange builder client?****CAPTURE**

the standalone answer, entities, services, process, proof, caveats, and source requirements.

FEEDS

concise answer blocks, entity language, structured data, AI-search strategy.

20**Which category claims should we avoid because the reality is more nuanced?****CAPTURE**

guarantees, timelines, lead quality, pricing, geography, process, rankings, and other claims needing qualification.

FEEDS

claim table, copy removals, FAQ caveats, final approval checklist.

49-56 minutes - measurement and handoff

Use this section to define success without inventing conversion outcomes.

21**What should count as a qualified builder lead?****CAPTURE**

geography, project type, investment fit, timing, decision-maker status, land or plan status, working style, and exclusions.

FEEDS

measurement plan, forms, CRM definitions, lead-quality FAQ.

22**What can marketing own, and what still depends on sales follow-up?****CAPTURE**

ownership boundary, response expectations, handoff, nurture, consultation, and feedback loop.

FEEDS

operating agreement, KPI map, 90-day plan.

23**Which leading indicators matter before closed-project data is available?****CAPTURE**

approved visibility, engagement, content-use, consultation, and lead-quality signals; avoid unsupported numeric targets.

FEEDS

scorecard, final presentation, reporting plan.

24**What does a healthy 90-day start look like?****CAPTURE**

realistic work completed, behavioral signs, leading indicators, sales feedback, and what would not yet be a fair expectation.

FEEDS

90-day roadmap, expectations section, September 3 success measures.

56-60 minutes - distinctive point of view and close

Use this section to get memorable BigOrange language and the skeptical buyer's decision criteria.

25**What advice do you give builders that other agencies often miss?****CAPTURE**

the distinctive principle, why it matters, a real example, and quote permission.

FEEDS

hero/supporting copy, expert callout, article leads, short-form content map.

26**Finish this sentence: "A builder does not need more marketing noise. They need..."****CAPTURE**

the exact completion and permission code.

FEEDS

potential pull quote, presentation, CTA framing. Do not use publicly without explicit approval.

27**What should a skeptical builder ask BigOrange before deciding to work together?****CAPTURE**

decision criteria, proof BigOrange should show, objections, and a responsible answer.

FEEDS

FAQ, consultation CTA, sales objection sheet, trust section.

Universal follow-up probes

Use these selectively. Do not turn each answer into a cross-examination.

- "Can you give me a real example?"
- "What did the builder or buyer actually say?"
- "What happened next?"
- "Is that a fact, your professional judgment, or a pattern you have observed?"
- "What would make that statement misleading?"
- "What proof would we need before publishing it?"
- "Can this be quoted, paraphrased, anonymized, kept internal, or should it be excluded?"
- "Which page or asset should this change?"

Time-recovery rule

At 30 minutes, check whether questions 1-11 and the story, failure-pattern, and objection outcomes are complete. If not, secure those outcomes with short follow-ups, then protect questions 12, 16, 20, 21, 24, 25, 26, and 27 plus the permission readback. Never sacrifice the qualified-lead definition, 90-day expectations, or permission status just to say all question numbers aloud.

Do not spend this interview on

- keyword volumes, technical audit walkthroughs, schema syntax, plugin settings, or WordPress implementation details already documented;
- compensation, invoicing, next-phase scope, or publication authority, which belong with Margee and Paula on September 3;
- choosing a new competing pillar URL; the approved strategy is to preserve and evolve the existing builder URL;
- extracting confidential client details that are not needed to make the content useful;
- asking Janice to approve claims, images, or quotes she has not actually reviewed.

Closing readback script

Before we wrap, I want to make sure I captured you correctly. I have the right-fit builder as [summary], the main trust and failure patterns as [summary], a qualified lead as [summary], a healthy first 90 days as [summary], and these statements as approved for [quote, paraphrase, anonymized, internal, or exclude]. I also have [number] FAQ answers and [story] as the possible firsthand example. Did I misstate anything? Is there anything here you do not want used? I will separate facts, opinions, examples, and confidential context, verify any named claim, and return the edited language for review before anything public.

Before ending, confirm:

- recording and transcript consent status;
- permission status for every marked segment;
- one approved or potentially anonymizable story;
- one failure pattern;
- one objection and response;
- qualified-lead definition;
- five to eight FAQ answers or the exact unanswered items;
- realistic 90-day definition;
- Janice's visual preference: 5546, 5585, or specific elements from each;
- approved project-photography availability and owner;
- Janice's realistic factual-review timing.

Do not promise a publication date during this call.

Immediate post-interview sequence

Within two hours

1. Preserve the recording and transcript only if consent was granted.
2. Record the consent status and permission code for every usable segment.
3. Separate the transcript into facts, opinions, examples, quotes, open questions, and confidential material.
4. Build a claim table with `verified`, `SME opinion`, `client evidence needed`, `source needed`, `internal only`, or `remove status`.
5. Flag every number, result, client story, named project, ranking, timeline, and platform claim for source verification.
6. List unanswered questions and assign an owner. Do not silently fill gaps with AI-generated language.
7. Preserve the exact selected transcript timestamps for each target asset.

Within one business day

1. Confirm or revise the pillar promise and its five operating stages using Janice's source material.
2. Reconcile permission-coded language across the pillar, two supporting articles, FAQs, CTAs, and proof sections.
3. Replace the three explicit SME review needs:
 - the pillar's distinction between a true operating difference and a generic brand claim;
 - article 1's two buyer-process questions and the point where builder websites create false expectations;

- article 2's guidance for discussing investment without false promises or avoidance.
- 4. Select one publishable firsthand example without unsupported outcome claims.
- 5. Identify one future case-study story that still requires separate client approval.
- 6. Approve or rewrite five to eight FAQ answers and keep visible FAQ copy identical to the FAQ schema.
- 7. Record Janice's page-direction and photography preferences as input, not final leadership approval.
- 8. Update the source register, transcript locator, claim table, reviewer status, and actual editorial review time.
- 9. Update the content calendar, 90-day roadmap, or 12-month roadmap only where Janice's evidence changes an assumption; do not churn approved strategy without a source-backed reason.
- 10. Update the AI-assisted workflow record with the real transcript-to-asset evidence so the pilot can demonstrate what one SME hour actually produced.
- 11. Return the revised pillar, two articles, FAQ set, candidate example, and permission summary to Janice for factual proof and editing before any public use.
- 12. Create the repurposing map for future emails, social posts, short videos, webinar segments, and a sales objection sheet without treating Phase 2 assets as current publication commitments.

Before the September 3 leadership review

Prepare one concise decision packet containing:

- the approved transcript excerpts and permission codes;
- a redline of Janice-derived changes to the pillar, articles, FAQs, and CTAs;
- the selected firsthand example and its evidence status;
- the five to eight reviewed FAQs;
- the definition of a qualified lead and the 90-day success measures;
- a side-by-side decision between WordPress drafts 5546 and 5585, including any narrowly defined hybrid recommendation;
- the approved-photography inventory or a clearly labeled missing-asset list;
- any source-backed changes to the content calendar or roadmaps;
- the actual transcript-to-assets map and recorded editorial-review time;
- the remaining technical and publication gates;
- the exact decisions and owners needed from Margee and Paula.

September 3 leadership decisions

Leave the 40-minute review with all of the following written down:

1. The chosen final direction: 5546, 5585, or a specifically bounded combination.
2. Confirmation that the chosen direction updates the existing /marketing-agency-for-builders/ authority URL rather than creating a competing pillar.
3. Named approvers for copy, visuals, claims, technical changes, and final publication.
4. The exact WordPress or staging target and the people with required permissions.
5. Approved project photography, category, and featured-image decisions for the two articles.
6. The next 90 days' success measures and lead-quality definition.
7. Exact next-phase deliverables, cadence, Dillon's role, and the ownership of SME, editorial, SEO, web, and publication reviews.
8. Compensation, invoice recipient, invoice workflow, payment timing, and next-phase start date.

9. The exact go-live approval gate, decision date, and rollback owner.

Do not begin an open-ended next phase on verbal enthusiasm alone.

Final production and release sequence

After factual and leadership approvals:

1. Consolidate the chosen visual and interaction system into one exact publication candidate.
2. Replace illustrative imagery where approved BigOrange client photography is available.
3. Apply and verify metadata, canonical settings, breadcrumbs, internal links, XML sitemap behavior, and schema without plugin duplication.
4. Confirm visible FAQ and FAQ schema parity.
5. Confirm supporting-article categories, featured images, author, SME reviewer, and internal links.
6. Complete the editorial gate: fact and source review, originality or plagiarism check, claim-table closure, link validation, usefulness and voice review, and the documented quality score.
7. Remediate and retest the known mobile-performance and accessibility work order.
8. Run desktop and mobile QA, keyboard and focus checks, reduced-motion checks, overflow checks, browser-console review, link validation, and live-equivalent performance tests.
9. Insert Janice-approved examples, the actual workflow evidence, and current staging results into the final presentation.
10. Return the exact final page revision and supporting articles for approval.
11. Publish only after the exact WordPress revision, approver, timing, and release gate are confirmed. Then verify the live URL, rendered metadata, schema, links, mobile behavior, accessibility, performance, analytics, and rollback snapshot.

Completion standard

The interview is complete only when the transcript or timestamped notes, consent status, permission map, claim table, a permission-coded candidate example with its verification status, FAQ set, qualified-lead definition, 90-day definition, open-evidence list, and review owners are all captured. A completed call without those records does not satisfy the proposal's SME workflow.

PART 2 - LIVE WORKING NOTES

Use these pages during the August 28 interview. Capture timestamps, exact language, permission status, verification needs, and owners while the source is fresh.

Consent and use boundary

Recording consent	yes no not asked
Transcription consent	yes no not asked
Consent timestamp	
Restrictions Janice stated	
Review-before-public-use confirmed	yes no

Permission codes: Q attributable quote, P paraphrase, A anonymized example, I internal only, X exclude, ? unresolved.

Must-get tracker

- ☐ One permission-coded firsthand builder story
- ☐ One personally observed marketing or sales failure pattern
- ☐ One common objection and response language
- ☐ Permission code for every useful segment
- ☐ Qualified builder lead definition
- ☐ Five to eight FAQ answers
- ☐ Healthy 90-day definition

For every answer, capture the timestamp, exact language, permission code, claim type, target asset, verification needed, confidentiality notes, and follow-up owner.
