

PRIVATE LEADERSHIP REVIEW

BigOrange WordPress Growth and Content Blueprint

One consolidated view of the approved paid pilot, the completed no-charge production extension, the live WordPress review set, exact content lengths, and the sitewide SEO, AEO, GEO, and conversion roadmap.

19	26,845	370	39
complete local review assets	words across the content system	published WordPress URLs scored	priority URLs with full write-ups

What I added on my own time

The approved pilot remains 35 hours at \$30 per hour, or \$1,050. I completed 16 additional full content assets, the 370-URL site playbook, and the answer-ready article upgrades without increasing the approved fee. I wanted the team to see how invested I am in BigOrange, how much I want to help build this system, and how seriously I take the opportunity to do this work for your clients.

Prepared for Margee, Paula, Emelia, and Janice

Prepared September 1, 2026 | Review target September 3, 2026

Executive readout

The original brief asked for a repeatable authority-hub system built from real subject-matter expertise. The paid proof of concept is complete at the review level: strategy, research, architecture, one pillar, two supporting articles, two private visual directions, technical guidance, roadmaps, workflow documentation, and presentation materials.

The extension shows how that pilot becomes an operating product. The release now contains 19 complete content assets, 19 WordPress-ready HTML fragments, 19 schema candidates, 66 internal-link relationships, a 39-URL deep matrix, and a recommendation ledger for all 370 published WordPress URLs.

Current state

Everything described as complete is a local or private review artifact. The public builder hub at post 1381 remains unchanged. Nothing in this package is represented as published, indexed, or producing outcomes.

The four decisions that unlock the next step

- Choose Orange Press, Cinematic Authority, or a tightly bounded combination.
- Approve Janice-derived language, the qualified-lead definition, and permitted project proof.
- Confirm the production URL sequence, imagery, implementation owner, and release approvers.
- Decide whether BigOrange wants to productize this same page-by-page contract for MSP, StoryBrand, manufacturing, landscaping, electrical, and other client verticals.

Commercial truth

Approved effort	35 hours
Approved rate	\$30 per hour
Approved total	\$1,050
No-charge extension	16 additional full content assets plus the sitewide playbook and review upgrades
Still needed	Invoice recipient, billing details, payment method, due date, acceptance and revision mechanics

Paid pilot deliverables

Discovery and strategy

- Current website and technical SEO audit, including architecture, internal links, Core Web Vitals, content gaps, and AI-search readiness.
- Competitor and professional keyword research with intent, priority, and inclusion or rejection rationale.
- Complete content calendar and authority-hub architecture with URLs, internal links, FAQs, resources, case-study direction, and downloadable opportunities.
- Google search and AI-answer strategy for Google AI Overviews, ChatGPT, Claude, Gemini, and Perplexity.
- 90-day implementation plan, realistic milestones, expected SEO timeline, and a bonus 12-month authority roadmap.

Working proof of concept

- One complete Custom Home Builder Marketing authority pillar with headings, internal links, FAQs, schema, calls to action, and metadata.
- Two complete supporting articles demonstrating topic clustering, internal linking, search intent, and answer-ready optimization.
- WordPress implementation guidance for schema, sitemap, metadata, canonicals, breadcrumbs, speed, maintenance, and marketer editability.
- Two private design directions in WordPress: Cinematic Authority and Orange Press.

SME and operating workflow

- Janice interview workflow that turns one hour of expert time into months of content while keeping factual and public-use approval human-owned.
- Documented research, drafting, editing, fact-checking, QA, WordPress, and publication process.
- 45-60 minute final presentation covering architecture, SEO, AI search, scale, improvements, and timing.

Phase 2 items mapped, not claimed as paid production

Social posts, a broader downloadable guide, video, and webinar production were named as Phase 2. The architecture can support them, but this blueprint does not misstate those production items as completed paid scope.

What exists in WordPress today

Item	ID	State	Leadership job
Orange Press pillar direction	Page 5585	Private	Evaluate the bolder BigOrange visual and interaction system
Cinematic Authority pillar direction	Page 5546	Private	Evaluate the premium editorial and architectural direction
What a Custom Home Builder Website Must Include	Post 5550	Private	Review the current must-include reader job and six answer-ready FAQs
Five Articles Every Custom Home Builder Blog Needs	Post 5552	Private	Review the starter editorial framework and six answer-ready FAQs
Current Custom Home Builder Marketing hub	Post 1381	Public and unchanged	Protect the existing ranking URL until the exact replacement is approved

The two upgraded supporting articles now include

- A direct-answer block in the opening section.
- A standalone definition box and decision table.
- Six visible FAQ pairs with matching FAQPage candidate markup.
- Live internal links only, review-state labeling, and no unapproved Homearama claim.
- Exact private-state installation instructions and rollback references.

The complete 19-asset authority system

The full release contains 19 owned URL assets and 26,845 words. Each asset has a complete editable source draft, WordPress-ready HTML, a schema candidate, metadata, CTA, internal-link assignments, and an explicit approval gate. Automated content QA passed all 19 assets with zero errors and zero warnings.

Blog scope clarified

The approved proof of concept requires two supporting articles. The StoryBrand example in the original packet describes a larger model of one pillar, three sub-pillars, and nine blogs. My extension brings the system to 19 complete URL owners, but 17 are recommended as evergreen page-type assets and two are post-type articles. I recommend adding the nine-blog editorial cadence after leadership approves the core architecture, rather than mislabeling service and resource pages as blogs.

Live site and ranking evidence

370	349	171	27
published URLs	sitemap URLs	Moz snapshot keywords	keywords in positions 1-3

The public site crawl was captured September 1, 2026. The ranking evidence comes from Emelia's August 14, 2026 Moz snapshot and is not presented as live current rank data.

Builder lane

- 21 tracked builder terms: 17 ranked and 4 unranked.
- 13 builder terms in positions 1-3, 1 term in positions 4-10, and 3 terms in positions 11-20.
- Every ranked builder term in that snapshot points to /marketing-agency-for-builders/.
- Eight additional live builder satellite URLs own zero tracked builder keywords in the snapshot, which supports a stronger hub-and-spoke architecture.

Rest-of-site lane

- 150 tracked terms across MSP, StoryBrand, manufacturing, inbound, and Cincinnati topics.
- 61 ranked and 89 unranked terms across 27 ranking URLs.
- 14 terms in positions 1-3, 27 in positions 4-10, and 20 in positions 11-20.
- These pages should be upgraded page by page before BigOrange assumes new content is the only growth lever.

PRIORITY ORDER

Website recommendations

Priority	Issue	Recommendation
P0	Homepage typo in meta, Open Graph, and schema	Correct Statagic to Strategic everywhere and verify the rendered metadata and schema.
P0	AI search services page has four H1 tags	Reduce to one clear H1, turn the other visual headlines into descriptive H2 or styled text, and recheck outline order.
P0	AI search services page is index, nofollow	Review Yoast intent and switch to follow only if the page is meant to pass authority. Fifteen published pages currently carry nofollow.
P1	21 published pages are absent from the page sitemap	Classify confirmation and campaign URLs intentionally. Include strategic indexed pages and keep utility sinks noindex.
P1	Builder hub mobile performance	Re-test after the approved design is selected. The August 20 sample showed performance 32 and LCP near 36 seconds; optimize the real critical path before any public swap.
P1	Homepage image accessibility	Fix the eight sampled images with missing or unusable alt text and verify focus, labels, headings, contrast, and keyboard flow.
P1	Ranking pages lack consistent answer-ready structure	Apply one URL per reader job, direct answers, definitions, tables, visible FAQs, entities, evidence dates, and matched schema where supported.
P2	Sitewide refresh and consolidation	Use the 370-row ledger to update, consolidate, redirect, noindex, or retain each URL based on owner, intent, proof, freshness, and search value.

Recommended 90-day sequence

Days 1-14: protect and decide

- Fix the three P0 technical defects and classify the 21 sitemap gaps.
- Select the visual direction and reconcile Janice language, proof permissions, and the qualified-lead definition.
- Confirm the existing /marketing-agency-for-builders/ URL as the one authority hub and record rollback ownership.

Days 15-45: stage the core cluster

- Stage the approved hub revision and the two supporting posts in private or staging state.
- Prioritize the strongest adjacent URL owners: marketing plan, SEO and AI visibility, website design, target market, lead generation, and local SEO.
- Verify metadata, canonical, schema, forms, analytics, CRM handoff, accessibility, speed, internal links, and sitemap behavior.

Days 46-75: add proof and editorial depth

- Publish only exact approved revisions, then read back live URLs, metadata, schema, links, forms, and analytics.
- Build the nine-blog editorial cadence from approved builder questions, SME stories, and search gaps.
- Turn approved examples into attributable project stories, visual proof, short-form content, email nurture, and sales follow-up material.

Days 76-90: productize for clients

- Apply the same export-to-page-map contract to MSP and StoryBrand pages already earning tracked terms.
- Create a blank client page map for the next vertical and preserve one source, one owner, one approval path, and one measurable reader job per URL.
- Report delivery, engagement, qualified inquiries, CRM outcomes, and content freshness without inventing ranking or revenue promises.

The repeatable Authority Hub Factory

The production system stays stable while the subject-matter expertise, market evidence, proof, and client voice change. That is the difference between a reusable operating model and a stack of generic pages.

Stage	Input	Output	Control
1. Discover	Site inventory, search data, CRM questions, competitor gaps	Reader-job map and priority ledger	Current evidence with dates and source ownership
2. Interview	One hour with the SME	Transcript, claims register, story candidates, FAQs	Permission codes and no invented proof
3. Architect	Keywords, intent, offers, proof	One URL per reader job, cluster links, content calendar	Cannibalization and duplicate-page checks
4. Produce	Approved brief and evidence	Editable copy, HTML, metadata, images, schema candidates	Human voice, sources, and factual review
5. Stage and QA	Exact implementation candidate	Private WordPress revision	Desktop, mobile, accessibility, performance, links, forms, analytics, rollback
6. Release and learn	Exact approved staged revision	Verified public page and measurement loop	Live readback, CRM truth, refresh trigger, no unsupported promises

What scales and what does not

The workflow, QA contract, page map, content modules, and release gates scale. Client facts, offers, voice, proof, imagery, permissions, and outcomes do not transfer between clients. Those must be sourced and approved every time.

Release gates and meeting checklist

- Janice or another named SME approves the exact factual and public-use language.
- Leadership approves the audience, offer, positioning, proof, CTA, imagery, ownership, and exact revision.
- The WordPress target, implementation owner, rollback owner, and publication sequence are named.
- Metadata, canonical, breadcrumbs, internal links, sitemap behavior, and schema are verified without duplication.
- Visible FAQ wording and FAQPage candidate markup match exactly.
- Desktop, mobile, keyboard, focus, reduced motion, overflow, accessibility, console, network, forms, tracking, and performance pass.
- Publication is approved for the exact staged revision, then the live URL is read back after release.

September 3 meeting checklist

1. Visual direction: Orange Press, Cinematic Authority, or bounded combination.
2. Canonical hub and release sequence.
3. Janice language, Homearama permission, approved stories, and imagery.
4. Qualified-lead definition, CTA, CRM handoff, and reporting owner.
5. Which content assets enter the first staging wave.
6. Whether BigOrange wants the sitewide 370-URL plan and client-scale factory as the next operating product.
7. Invoice recipient, billing details, payment method, due date, acceptance, revisions, ownership, confidentiality, and portfolio use.

Bottom line

The paid pilot proves the concept. The no-charge extension proves the operating system. The next step is not to publish everything at once. It is to choose the direction, approve the truth, protect the URL that already ranks, stage the strongest cluster in order, verify the measurement path, and then scale the same disciplined system to BigOrange clients.
