

BigOrange website defect list

No site changes were made. The public crawl is dated September 1, 2026, the builder hub performance observation is dated August 20, 2026, and the contextual Moz snapshot is dated August 14, 2026. Recheck every item immediately before remediation.

Priority issues

P0 AI service page heading and robots conflict

Snapshot	/ai-search-optimization-services/ had four H1 elements and index, nofollow.
Next action	Choose one H1 and one coherent indexation decision.
Close with	A fresh rendered outline, robots meta and response-header check.

P0 Homepage metadata spelling

Snapshot	Stategic appeared in metadata, Open Graph and Organization schema.
Next action	Correct every reuse of the source field.
Close with	Fresh source and structured-data readback.

P0 Builder hub mobile performance

Snapshot	The August 20 observation recorded approximately 36 seconds mobile LCP for /marketing-agency-for-builders/.
Next action	Profile hero media, fonts, scripts and server response before replacing the hub.
Close with	A fresh mobile performance run after the approved repair.

P1 Published pages missing from sitemap

Snapshot	21 published pages were absent from the page sitemap.
Next action	Classify every URL and include only strategic indexable pages.
Close with	A fresh sitemap diff against the published URL inventory.

P1 Published pages carrying nofollow

Snapshot	15 published pages carried nofollow.
Next action	Keep the directive only where the intent is deliberate and documented.
Close with	A fresh robots inventory with an owner and reason for each exception.

P1 Homepage image alternatives

Snapshot	8 of 50 homepage images lacked alt text.
Next action	Add useful alternatives to meaningful images and empty alt attributes to decorative images.
Close with	A fresh accessibility scan plus manual image-purpose review.

This is a dated remediation brief, not WordPress authorization and not a ranking or conversion forecast. BigOrange approves the changes; fresh verification closes each issue.
