

BRIDGE

CONNECT. GROW. FIGHT TOGETHER.

CLIENT FEEDBACK · PRODUCT ROADMAP

Tori's feedback, Phase 2 and beyond.

A detailed translation of Tori Patterson's prototype response into Dillon's product, UX, front-end, integration, QA, and launch-readiness plan.

PREPARED

August 1, 2026

SOURCE REVIEWED

Full 39:17 meeting transcript

CURRENT TRANSITION

Feedback → Phase 2 refinement

PURPOSE OF THIS DOCUMENT

Confirm what Tori loves, capture what she wants changed, distinguish immediate work from later-phase ideas, and make Dillon's responsibilities and next outputs clear enough for the team to build without losing the product owner's intent.

The direction is validated. The next job is disciplined refinement.

“The prototype was BEAUTIFUL... it exceeded my expectations.”

TORI'S WRITTEN RESPONSE AFTER REVIEWING THE FIRST WORKING PROTOTYPE

LATER-PHASE DECISION
GROUPS

What is clearly working

- The deep-purple, black, and white direction feels like Bridge.
- The Bridge metaphor, signal language, and “One industry, one network, one Bridge” framing resonate.
- The Create experience and connected-product concept have strong product-owner energy behind them.
- The product is understood as a nationwide industry network, not a local directory.

What Phase 2 must improve

- Clearer hierarchy, navigation, labels, search, and homepage focus.
- More visual storytelling, imagery, interaction, and product specificity.
- Explicit roles, audiences, verification, pricing visibility, and profile permissions.
- Concrete discovery, filtering, favorites, publishing, profile, and feed behavior.

Working conclusion: Phase 2 is not a restart. It is the conversion of a successful directional prototype into an approved product system with clearer journeys, decisions, components, and acceptance criteria.

Evidence note: Otter used automated speaker labels. Tori is identified as Speaker 2 from first-person ownership and self-reference in the conversation. Companion-originated ideas are treated separately unless Tori explicitly supported them.

Tori's product and design direction.

Brand and visual character

- Keep purple and the dark foundation. It feels right and is easy to stay in.
- Keep the Bridge and signal language, plus the strongest network positioning.
- Add imagery, animation, hover behavior, motion, and more visual energy.
- Reduce the hero typography's dominance so supporting product value gets read.
- Remove language that rejects metrics; Bridge should help users understand and improve marketing performance.

Navigation and information architecture

- Make the primary destinations obvious: profile or home, Explore, Create, and Community News or News Feed.
- Rename "Exchange" to "Explore."
- Consider "My Profile" or "Home Base" for the business home.
- Simplify search and introduce clear category pathways.
- Prototype a Pinterest or newspaper-style feed against a simpler vertical feed before locking the pattern.

Creation and audience controls

- Support uploads of existing PNG, PDF, and image assets.
- Add Promotion as a clear content type.
- Allow one post to reach multiple approved audiences.
- Separate public promotion from protected wholesale pricing and business-only information.
- Preserve the strengths of the current Create experience while making it more practical.

Profiles and verification

- Show current sales and accounting contacts directly on business profiles.
- Prompt organizations to re-verify contact information regularly.
- Define public, consumer, professional, retailer, and EIN-verified business access.
- Decide how vendor-to-vendor visibility works without pretending competitive information can be perfectly hidden.
- Broaden the verified directory to qualified service providers across the cannabis ecosystem.

Network, commercial, and launch implications.

Nationwide discovery

Bridge should connect legal markets across the country. State, location, product, category, brand, strain, and favorites filters should help people see national movement without overwhelming the default feed.

Consumer utility

Dispensary profiles should connect people to live menus, ordering, directions, and relevant social or marketplace channels. The point is to make discovery useful and support real business outcomes.

Industry directory

The network can include qualified banks, transporters, testing labs, manufacturers, construction teams, HVAC providers, electricians, and other industry services, with appropriate credentials and references.

Revenue hypothesis

The conversation explored an early brand price near \$349 to \$350 per month, an introductory free period, annual commitment, and grandfathered pricing. These are testable hypotheses, not final commercial terms.

Two-sided launch

Brands and businesses must be recruited while consumer and industry awareness grows through events and street-level activation. The launch plan should avoid an empty-network problem on either side.

Later-stage HR

A future HR-support concept may create value, but employee handbooks, advice, privacy, role access, and legal exposure make it inappropriate for the MVP without a dedicated legal and operating model.

Sequencing principle: build the trusted network and its repeatable connection loops first. Test monetization and acquisition with evidence. Keep legally complex expansion concepts in a governed future backlog.

Product North Star after Tori's feedback

Bridge becomes the verified, nationwide operating network where cannabis businesses, professionals, and consumers can discover the right people and products, publish to the right audiences, protect sensitive information, and move from signal to useful action.

What Tori said → what I will do.

FEEDBACK SIGNAL	DISPOSITION	DILLON'S PRODUCT AND FRONT-END ACTION
Keep the purple, dark, Bridge-led direction	KEEP	Lock the official palette and mark as the design-system source, then improve hierarchy, imagery, motion, contrast, and component consistency.
Navigation feels jumbled	REFINE	Rework the application map around Home or Profile, Explore, Create, and Community News; test labels before build acceptance.
Exchange should be Explore	ADOPT	Update route language, way finding, page purpose, and future acceptance fixtures around Explore.
Homepage needs stronger visual hierarchy	REFINE	Reduce hero dominance, add purposeful imagery and interaction, and prove the page works at desktop and mobile widths.
Upload existing assets and post promotions	PHASE 2-4	Specify upload, asset, content-type, validation, audience, preview, save, and publishing states; align storage and permissions with Miraj.
Multiple audiences with protected information	DECISION	Produce the audience and field-visibility matrix, then encode it into page states, data contracts, tests, and review examples.
Nationwide discovery, filters, and favorites	PHASE 2-4	Design Explore filters, saved preferences, favorite views, state/category pathways, empty states, and ranking assumptions.
Verified profiles need current contacts	PHASE 2-4	Map profile ownership, contact roles, re-verification prompts, renewal, changes, and audit history.
Pinterest/news feed versus vertical feed	PROTOTYPE	Create side-by-side responsive concepts and recommend the option that best supports comprehension, scanning, and accessible mobile use.
\$349-\$350 and two-sided launch	VALIDATE	Turn the pricing and launch concepts into research questions, landing-message tests, onboarding assumptions, and measurable pilot criteria.
HR support concept	LATER	Keep outside the MVP. Define only after legal review, privacy requirements, partner responsibility, and access controls are established.

Product definition and UX refinement.

My Phase 2 responsibility is to turn Tori's enthusiasm and detailed feedback into one approved product package that the implementation team can use without guessing.

01

Lock the product language and application map

Define Home or Profile, Explore, Create, Community News, verification, directory, consumer utility, and administration as named surfaces with a clear purpose and handoff path.

OUTPUT: APPROVED ROUTE AND SCREEN MAP

02

Produce the role, audience, and visibility matrix

Map what consumers, industry professionals, retailers, dispensaries, brands, service providers, representatives, and administrators can see, publish, edit, verify, and manage.

OUTPUT: ROLE AND FIELD-PERMISSION CONTRACT

03

Refine priority journeys

Detail the steps for discovering a business, viewing a verified profile, creating and targeting a post, uploading an asset, finding a product or service, ordering from a dispensary, and confirming profile contacts.

OUTPUT: JOURNEY MAPS AND ACCEPTANCE CRITERIA

04

Prototype the unresolved design choices

Build a responsive feed comparison, revised homepage hierarchy, clearer navigation, simplified search, category controls, filter patterns, and favorites behavior.

OUTPUT: REVIEW-READY RESPONSIVE PROTOTYPES

05

Separate MVP, approved follow-on, and future concepts

Prevent enthusiasm from becoming uncontrolled scope by giving every idea a phase, owner, dependency, acceptance signal, and review date.

OUTPUT: PHASED BACKLOG AND DECISION RECORD

Phase 2 exit standard: Tori and the team can explain what is being built first, who it serves, what each role can do, how it should look, and what evidence will prove each journey is ready.

Frontend foundation and integration contracts.

My job in Phase 3

Translate the approved experience into a reusable purple product system and align every screen with Miraj's authentication, data, storage, permissions, API, and environment work

Design system

- Production color, type, spacing, radius, elevation, and motion tokens.
- Responsive application shell and approved navigation.
- Buttons, forms, cards, filters, feed items, profile modules, badges, uploaders, modals, tables, and status patterns.
- Loading, empty, success, review, permission, and recovery states.

Product templates

- Home or Profile, Explore, Create, Community News, directory, profile, verification, and administration templates.
- Public, member, verified-business, and administrator variants.
- Mobile and desktop feed treatments for direct comparison.
- Reference screens that show actual industry context instead of generic placeholders.

Miraj alignment

- Route and entity naming.
- Authentication and role claims.
- Profile, contact, audience, post, verification, favorites, and notification data shapes.
- Upload, storage, API response, permission, and environment contracts.

AI-assisted implementation controls

- Use Claude, Codex, and Cursor for bounded research, specification, code, testing, and QA.
- Keep client secrets and sensitive verification data outside prompts.
- Review generated work against approved components and acceptance criteria.
- Preserve a decision and implementation record.

Phase 3 exit evidence: approved purple design system, responsive shell, reusable component rules, integration contracts, tested development workflow, and one complete vertical slice.

Build the MVP, integrate it, and prove it works.

PHASE 4 • CORE MVP FRONT END

- 1 **Onboarding and verification:** age and location, role selection, profile setup, EIN or business evidence, review status, renewal, and recovery.
- 2 **Explore and profiles:** state, category, product, brand, service, and favorites filters with public and verified-business views.
- 3 **Create and publish:** direct asset uploads, Promotion content, audience selection, protected fields, preview, save, and publish states.
- 4 **Consumer utility:** dispensary menu, ordering, directions, and approved external profile links.
- 5 **Operations:** contact re-verification, notifications, reporting, moderation entry points, and administrator queues.

PHASE 5 • INTEGRATION, QA, ACCEPTANCE

- 1 Connect approved APIs, authentication, storage, and data services in reviewed vertical slices.
- 2 Test every role and permission boundary, including protected pricing and business-only information.
- 3 Verify responsive behavior, keyboard access, screen-reader basics, contrast, motion preferences, and recovery states.
- 4 Test forms, uploads, search, filters, favorites, notifications, ordering handoffs, verification, and moderation workflows.
- 5 Turn failures into evidence-backed tickets and maintain a clean demo path for Tori and the team.

My acceptance standard: a polished screen is not complete until the workflow, role behavior, data expectation, error states, responsive behavior, and acceptance evidence are all covered.

Review point

Show one complete journey at the end of each vertical slice.

Quality point

Verify content, permissions, responsive states, and integration behavior.

Approval point

Record Tori's outcome and select the next prioritized slice.

Pilot, launch, learn, then expand responsibly.

Phase 6 · Pilot and launch readiness

- Define the first launch market, participant mix, and first successful connection.
- Prepare brand, retailer, service-provider, and consumer onboarding paths.
- Support a two-sided acquisition plan across major brands, direct outreach, events, and field activation.
- Establish analytics, consent, support, moderation, data-quality, and rollback procedures.
- Test the \$349–\$350 hypothesis and introductory offer through a controlled pilot rather than treating it as final pricing.
- Document the product, administrator workflows, release checklist, and next backlog.

Beyond the MVP

- Deeper market and Signal intelligence with documented sources and methodology.
- Advanced promotion, analytics, exports, paid entitlements, and business tools.
- Expanded service-provider verification and industry-specific directories.
- Richer collaboration, messaging, events, and community experiences.
- Mobile-distribution decisions after platform-policy and transaction-boundary review.
- HR support only after legal, privacy, partner, and role-access architecture is approved.

A

Launch with density, not just availability

The first market should contain enough brands, retailers, services, and active users to demonstrate a useful network instead of an empty platform.

B

Use evidence to sequence the marketplace

I will translate acquisition assumptions into measurable activation, retention, content, connection, and conversion signals so the team can decide where to invest next.

C

Protect the product from ungoverned expansion

New ideas enter the decision log with value, risk, owner, dependency, phase, and acceptance criteria before they become build commitments.

Launch-readiness principle: Bridge is ready to advance when its primary journeys are understandable, role-aware, integrated, tested, documented, supportable, and valuable to a real initial network.

Product structure, UX, front end, and acceptance readiness.

My role in one sentence

I turn Tori's product vision and prototype feedback into a usable, role-based product experience, then help carry that experience through requirements, front-end implementation, integration, QA, launch readiness, and the next-phase backlog.

I own

- Product structure and application map.
- User journeys, role flows, screen direction, and phased backlog.
- UX decisions and responsive front-end requirements.
- Official purple design-system application.
- AI-assisted design, implementation, testing, and documentation workflow.
- Implementation review, visual QA, acceptance evidence, and client-ready walkthroughs.

I co-own with Miraj and the team

- Front-end architecture and component structure.
- Authentication, role claims, data shapes, APIs, storage, uploads, permissions, and environment contracts.
- Onboarding, verification, profiles, discovery, publishing, notifications, and administration behavior.
- Compliance and research findings translated into product behavior.
- Integration sequencing, role testing, critical-path QA, and launch readiness.

Tori

Product vision, brand direction, priority decisions, and milestone acceptance.

Miraj

Backend, platform architecture, authentication, data, storage, permissions, and APIs.

Mac and Melissa

Commercial scope, milestone review, coordination, communication, and feedback follow-through.

Definition of done for my lane: the product can be explained in plain language, every approved role has a clear path, the front end matches the agreed data and permission model, primary workflows are tested, and the team has a written, prioritized plan for what comes next.

Ten actions that move Bridge into Phase 2.

- 01 Record Tori's positive direction and the official purple system as the current working design source.
- 02 Update the application map around Home or Profile, Explore, Create, and Community News.
- 03 Create the role, audience, protected-field, and verification matrix.
- 04 Build the revised homepage hierarchy and side-by-side feed concepts.
- 05 Specify uploads, Promotion content, multi-audience publishing, and protected pricing states.
- 06 Specify nationwide Explore, state/category filters, favorites, and consumer profile utility.
- 07 Align the approved journeys and data contracts with Miraj.
- 08 Package the reusable purple design system and responsive component patterns.
- 09 Select and build the first complete Phase 3 vertical slice with acceptance fixtures.
- 10 Review the working journey with Tori, record acceptance, and choose the next prioritized slice.

The prototype created excitement. Phase 2 turns that excitement into a precise product contract and a build sequence the entire team can execute.

RECOMMENDED TRANSITION OUTCOME

Working basis: the full July 23 Otter transcript, Tori's July 31 written response, Dillon's six-milestone execution plan, the official Bridge brand source, the July 27 current-state report, and the July 28 purple-direction milestone plan. Future commercial, legal, compliance, and platform-policy decisions remain subject to the responsible owner's approval.

Bridge branding guide.

BRANDING KIT

CONNECT. GROW. FIGHT TOGETHER.

BRIDGE exists to help people stay connected, grow together, and fight together against everything and everyone keeping them in the shadows.

CONNECT

Bringing people and businesses together.

GROW

Empowering the cannabis industry to thrive.

FIGHT TOGETHER

Standing strong for an industry that deserves equality.
