

SEO + AI VISIBILITY OPPORTUNITY REPORT

A STRATEGIC ANALYSIS OF DIGITAL VISIBILITY
& GROWTH OPPORTUNITIES

PREPARED FOR

Bill Gallipo

AUGUST 28, 2026

A strong rebuild is live. The next win is turning it into a local authority engine.

The site now has a credible visual identity, useful service depth, and clean crawl fundamentals. The highest-return work is not a wholesale rewrite. It is a focused pass on mobile speed, index refresh, location ownership, proof, schema consistency, and conversion measurement.

26	56	96	100
INDEXABLE SITEMAP URLS	MOBILE Lighthouse PERFORMANCE	AUTOMATED ACCESSIBILITY	Lighthouse SEO CHECKS

Bottom line

Meza has more on-site substance than its stale search snapshot suggests. The commercial priority is to help Google recrawl the refreshed pages, make the best proof easier to find, and give every valuable query one clear page owner.

What is already working

Verified strength	Why it matters
One H1 on every crawled page	Clear page-level topic hierarchy.
Unique titles and canonicals across the live crawl	Reduces basic duplication and indexing ambiguity.
Descriptive alt text across crawled images	Supports accessibility and image understanding.
LocalBusiness and service-oriented schema are present	Provides an entity foundation to extend consistently.
Strong visual identity and an above-fold call CTA	The site looks like a real contractor brand, not a directory template.

Top five priorities

Priority	Action	Expected effect
1	Fix the mobile LCP path: hero image delivery, preload, redirects, caching, render-blocking CSS/JS.	Faster first impression and stronger mobile UX.
2	Submit the refreshed sitemap and request recrawl of the homepage and core service pages.	Replace stale indexed copy and old service snippets.
3	Noindex or consolidate the duplicate tile category archive; noindex the feedback utility page.	Cleaner index and less intent dilution.
4	Build verified project case studies and credential proof into service pages.	More trust, differentiation, and AI-citable evidence.
5	Create only evidence-backed location owners for priority markets beyond Centennial and Denver.	Local relevance without thin doorway pages.

What was reviewed and how the brand was preserved

This report uses the live site as the primary authority. Traffic, rankings, booked jobs, Search Console, analytics, and Google Business Profile owner data were not available and were not estimated.

Verified visual system

- Official transparent Meza Tile & Stone stair/pyramid mark, free of a boxed background.
- Primary accent: Meza orange with mineral white and near-black.
- Website typography: Placa display face and Montserrat body family.
- Report typography: architectural Archivo headings with highly legible Source Sans 3 body copy.

Evidence reviewed

Layer	Evidence
Website	27 live URL fetches: 26 canonical apex URLs plus the www redirect check.
Crawl	Titles, descriptions, canonicals, H1-H3 hierarchy, words, images, alt text, forms, internal links, schema types, robots.txt, and XML sitemaps.
Performance	Local Lighthouse 13.x lab runs on mobile and desktop against the live homepage.
Search demand	Current Google autocomplete samples plus representative local web searches. No keyword volume was invented.
Competition	Public first-party pages from Centennial, Denver, Castle Rock, and Colorado Springs competitors.
Entity consistency	First-party schema and public directory/search references, treated as conflict signals rather than authoritative truth.

Important freshness finding

The live homepage has been substantially refreshed, but web search still surfaced a five-month-old snapshot with placeholder service copy. That is not a live-site defect now. It is an index freshness issue and a reason to request recrawl after final QA.

Brand and conversion observations

- The stair/pyramid mark is distinctive and consistent across desktop and mobile.
- The orange CTA has strong contrast against the dark hero image.
- The hero says what Meza does and where, but the single action is phone-first. Add a second path for visitors who prefer an estimate form.
- The 'Licensed & Insured' lockup is valuable trust language. Publish the applicable license, insurance, and certification details only after they are verified.

Mobile speed is the clearest measured weakness

The site passes many automated checks, but the mobile experience waits too long for the largest visual element. Lighthouse is lab evidence, not field Core Web Vitals, so the next step is to validate the fix in Search Console once deployed.

Metric	Mobile	Desktop	Interpretation
First Contentful Paint	4.8 s	1.5 s	Mobile content appears late.
Largest Contentful Paint	12.5 s	2.8 s	Mobile hero delivery is the main risk.
Total Blocking Time	240 ms	10 ms	Some mobile main-thread delay remains.
Cumulative Layout Shift	0.005	0	Visual stability is strong.
Speed Index	6.2 s	1.9 s	Mobile visual completion needs work.

Measured opportunities

Finding	Measured signal	Fix
Hero and image delivery	Estimated savings: 428-485 KiB; mobile LCP 12.5 s.	Serve properly sized AVIF/WebP, compress, preload the LCP asset, add fetchpriority=high, and avoid CSS background loading when possible.
Canonical host redirect	www adds one 301; Lighthouse estimated 2.1 s mobile savings in this run.	Use https://mezatilestone.com in GBP, ads, citations, social profiles, internal links, and collateral.
Document latency	Root document roughly 780 ms in the mobile run.	Enable full-page caching where safe, tune hosting/PHP, and use Cloudflare cache rules for public pages.
Render-blocking requests	Estimated 820 ms mobile savings.	Inline critical CSS, defer non-critical theme CSS, and use font-display: swap.
Unused JavaScript	Roughly 91 KiB mobile savings.	Remove unused plugin assets per template and defer scripts that are not needed above the fold.
Untitled embedded frame	Only automated accessibility failure.	Give the scheduling/map iframe a concise descriptive title.

The crawl is clean, but the index can be made more selective

Every sitemap URL returned 200 in the audit, all 80 sampled internal links resolved successfully, and robots.txt does not block major AI crawlers. The main opportunities are utility-page index control, archive duplication, schema graph consistency, and hosting modernization.

Check	Current state	Recommendation
robots.txt	Allows the public site and declares the XML sitemap.	Keep Googlebot and AI discovery bots accessible unless policy intentionally changes.
XML sitemap	26 apex URLs across page, post, and category sitemaps.	Remove non-search utility URLs and resubmit in Search Console.
HTTP status	All sitemap URLs returned 200.	Monitor monthly and after theme/plugin changes.
Internal links	80 unique sampled internal URLs returned 200.	Retain automated link checks in release QA.
Canonicals	Present and self-referencing on canonical pages.	Normalize all outbound uses to the apex host.
AI bot access	No explicit GPTBot, ClaudeBot, PerplexityBot, or Google-Extended block.	Document the desired policy and monitor server logs.

Index cleanup

URL	Finding	Action
/category/tile-installation/	No meta description and 0.85 five-gram similarity to /blog/ because both list the same posts.	Noindex and remove from the sitemap, or make it a genuinely useful topic hub with unique copy and pagination.
/feedback/	A 186-word utility page appears in the page sitemap.	Noindex and remove from the sitemap unless it is intentionally a search landing page.
/reviews/	Extensive embedded review text but a generic 29-character title.	Use a descriptive local title and link reviews to their original sources where permitted.
/gallery/	61 images and roughly 148 words.	Turn the strongest projects into indexable case studies with city, scope, materials, challenge, method, and result.

Security and hosting priority

The live response exposes X-Powered-By: PHP/7.4.33. PHP 7.4 reached end of life in November 2022, and WordPress now recommends PHP 8.3 or newer. Upgrade in staging, test the custom theme and plugins, then deploy with rollback and post-launch QA.

Additional hardening

- Remove the X-Powered-By version disclosure after the runtime upgrade.
- Add HSTS, X-Content-Type-Options, Referrer-Policy, and a tested Content-Security-Policy where compatible.
- Confirm automated backups, malware scanning, least-privilege admin accounts, and plugin update ownership.

Give every valuable intent one page owner

The service footprint is already substantial. The next step is to reduce intent overlap, strengthen proof, and decide which locations deserve dedicated pages based on real project evidence and business priority.

Page ownership decisions

Current URL	Primary owner	Recommended decision
/	Brand + remodeling contractor Centennial	Keep as the broad commercial entry. Add compact service proof and a secondary estimate CTA.
/tile-installation/	Tile installation Centennial	Keep as the Centennial tile pillar and link every tile specialty page beneath it.
/tile-installation-in-denver/	Tile installation Denver	Keep as the Denver owner; add real Denver projects, neighborhoods, and source-backed proof.
/bathroom-tile-installation/	Bathroom tile installation Centennial	Keep tile-specific; link to full bathroom remodeling without duplicating its intent.
/remodeling/bathrooms/	Bathroom remodeling Centennial	Own full-scope remodel intent: planning, demo, plumbing, waterproofing, fixtures, finish work.
/countertops/	Countertop installation Centennial	Clarify installed materials and service model. Add only material claims Meza can verify.
/tile-repair/	Tile and grout repair Centennial	Expand diagnosis, repair limits, matching constraints, and when replacement is smarter.
/gallery/	Project proof hub	Convert into filters and case-study links, not an image-only endpoint.
Two tile-cost posts	General cost vs floor-specific cost	Differentiate with explicit scopes and internal links, or merge and redirect if Search Console shows cannibalization.

Proof blocks to add to every commercial page

Block	What it should contain
Named expertise	Installer or reviewer name, role, years of experience, verified credentials, and a profile link.
Project evidence	City, scope, materials, challenge, method, duration only when documented, and original photos.
Process	Five to seven verb-first steps from consultation through walkthrough.
Quality standard	Substrate preparation, waterproofing, movement joints, layout approval, cleanup, and warranty terms only if applicable.
Specific CTA	Request an estimate, schedule a project discussion, or call. State response timing only if operationally true.

Do not create 20 near-duplicate city pages

A location page should exist only when Meza can support it with real projects, service details, travel/coverage reality, testimonials, photos, and unique local context. Otherwise, keep the market in areaServed and prioritize a smaller set of proof-rich pages.

Make the same business appear everywhere

The first-party schema points to a Centennial address and defined hours. Public directories surfaced different cities, hours, domains, and review counts. Those records are conflict signals that should be reconciled against the owner-controlled Google Business Profile before any bulk edits.

Entity field	First-party site	Observed conflict signal	Action
Website	mezatilestone.com	Some directories reference mezatileandstone.com.	Use the apex canonical everywhere and redirect any owned legacy domain.
Primary location	Centennial address in LocalBusiness schema	Some listings present Denver or Colorado Springs as the location.	Confirm the exact GBP business model: storefront vs service-area business.
Hours	Weekday and weekend hours in schema	Some listings say 24 hours.	Choose one operational truth and synchronize owned profiles.
Reviews	Site says 100+ five-star reviews	Third parties report different historical totals.	Pull current counts from GBP and link to the review source; never hard-code stale totals without an update owner.

Google Business Profile operating checklist

Weekly	Monthly	Quarterly
Respond to new reviews with specific, natural language.	Upload original project photos with honest captions and service context.	Audit categories, services, hours, areas, appointment URL, and users.
Check calls, messages, website clicks, and booking links.	Publish one project update or service post when there is real work to show.	Reconcile citations and suppress inaccurate duplicates.
Watch for profile edits and suggested changes.	Review the queries and actions surfaced in GBP performance.	Compare GBP leads with call and form outcomes.

Priority market sequence

Market	Current site state	Recommendation
Centennial	Strong service-page ownership across tile and remodeling.	Defend and deepen with local projects, proof, and GBP alignment.
Denver	Dedicated tile-installation page exists.	Add Denver-specific case studies and decide whether remodeling deserves a separate owner.
Castle Rock	Listed as served; no dedicated owner in the crawl.	Create a page only after verifying demand, delivery capacity, and project proof.
Colorado Springs	Listed as served; public web references associate Meza with the market.	Confirm the current GBP/location relationship before building a dedicated page.
Other listed cities	Area list only.	Use areaServed and project mentions first; promote only markets with sustained job evidence.

Core commercial map: existing pages first

Priority reflects local intent, service fit, current page ownership, and evidence from representative searches and Google autocomplete. It is directional, not a substitute for Search Console or paid keyword-volume data.

Priority query cluster	Intent	Owner	Action
tile contractor Centennial CO; tile installation Centennial	Hire	/tile-installation/	Keep as the local tile pillar; add estimate CTA and project proof.
tile installer Denver CO; tile contractor Denver	Hire	/tile-installation-in-denver/	Add real Denver projects and differentiated local context.
bathroom remodel Centennial CO	Hire	/remodeling/bathrooms/	Strengthen full-scope process, proof, and material choices.
kitchen remodel Centennial CO	Hire	/remodeling/kitchens/	Add projects, sequencing, surfaces, and CTA proof.
basement remodel Centennial CO	Hire	/remodeling/basements/	Shorten the title and add local basement-specific proof.
countertop installation Centennial CO	Hire	/countertops/	Clarify materials, templating/fabrication relationship, and installation scope.
bathroom tile installation near me	Hire	/bathroom-tile-installation/	Own tile-specific bathroom intent and link to full remodels.
backsplash installation near me	Hire	/backsplash-installation/	Add patterns, materials, prep, timelines only when sourced.
tile floor installation near me	Hire	/floor-tile-installation/	Add substrate, leveling, transitions, heated-floor options if offered.
tile repair near me; grout repair near me	Hire	/tile-repair/	Expand diagnostic decision tree and service boundaries.
custom tile work near me	Hire	/custom-tile-work/	Feature mosaics, fireplaces, large-format work, and original projects.

Owner rule

Each query cluster should have one canonical page owner. Supporting articles link to that owner; they do not repeat the same commercial copy or target the same title/H1 combination.

High-value gaps and question demand

Google autocomplete consistently surfaced cost, near-me, process, labor, and installer-company variations. Build content from real Meza operating knowledge and quote data, not generic national averages copied from other sites.

Cluster	Recommended owner	Content requirement
shower tile installation; shower remodel	Expand bathroom tile page or create /shower-tile-installation/ if volume and service fit justify it.	Waterproofing, pan/slope, niches, curbs, glass coordination, project examples.
large format tile installation	Section on tile pillar; dedicated page only with project proof.	Substrate flatness, handling, lippage control, layout, qualified installer proof.
natural stone installer	New /natural-stone-installation/ owner.	Materials actually installed, sealing, substrate, interior/exterior limits, projects.
fireplace tile installation	Section or child page under custom tile work.	Heat suitability, surface prep, design/layout, mantle coordination, project photos.
heated tile floor installation	Section on floor tile page if offered.	System types, electrical coordination, floor height, controls, warranty boundaries.
tile installation cost	Keep general cost article as owner.	Use verified range methodology, cost drivers, exclusions, and update date.
tile floor installation cost	Keep floor-specific cost article only if clearly differentiated.	Labor/material split, prep, removal, leveling, room examples from real estimates.
bathroom remodel cost Denver/Colorado	New research-led guide.	Local cost drivers using Meza quote data, scope tiers, exclusions, update cadence.
grout repair vs replacement	Support tile repair pillar.	Decision table, symptoms, repair limits, matching, warranty and call CTA.
tile waterproofing failure signs	Support bathroom tile pillar.	Named expert review, photos, warning signs, inspection steps, escalation guidance.

Suggested 12-week publishing sequence

Week	Asset	Primary conversion path
1-2	Refresh tile pillar, Denver page, bathroom remodel page, and gallery proof architecture.	Estimate request or call.
3-4	General tile installation cost guide, reconciled with the floor-cost article.	Tile installation pillar.
5-6	Shower waterproofing/failure guide reviewed by a named installer.	Bathroom tile page.
7-8	Natural stone service page plus one supporting material comparison.	Natural stone consultation.
9-10	One Centennial and one Denver project case study.	Relevant service/location owner.
11-12	Bathroom remodel cost guide built from verified local quote patterns.	Bathroom remodeling page.

The strongest competitors lead with specific proof

This is not a ranking. It is a public first-party pattern review showing what nearby search results make easy for homeowners and search systems to understand.

Observed competitor	Market	Public pattern worth learning from	Meza response
Divine Design	Denver	CTI/GTPP credential numbers, named owner, four-step process, specific service CTAs, long-form local expertise.	Publish verified credential details, named expertise, process, and original project proof without copying language.
Spectrum Tile	Colorado Springs	46-year local history, owner oversight, concise service descriptions, recognizable project references, free-quote CTA.	Make Meza's 23 years concrete through people, timeline, projects, and specific local work.
Talamo Tile & Stone	Castle Rock	CTI #1420, NTCA membership, service specialization, local testimonial.	Link verified association/certification proof and match testimonials to projects and cities.
Ceramics Plus	Centennial	Family/veteran ownership and 25-year experience cues, but visible placeholder content remains.	Keep Meza's stronger polish and avoid template residue; lean into precise proof.

What Meza can own

Differentiator	How to prove it
Communication	Show the estimate, update, layout-approval, and walkthrough steps; include real project examples.
Breadth	Connect tile, stone, countertops, kitchens, bathrooms, basements, and closets through a clear architecture.
Speed with care	Use documented project timelines only, paired with scope and quality-control details.
Craftsmanship	Before/during/after galleries with materials, prep, cuts, waterproofing, grout alignment, and finish details.
Local knowledge	Discuss Colorado substrate movement, dry climate, wet-area assemblies, and market-specific project conditions with expert review.

Avoid the generic adjective race

Words such as quality, trusted, expert, and premium are table stakes. Search engines and buyers need verifiable specifics: who performed the work, what system was used, where the project happened, what changed, and how the result was checked.

Keep the brand. Reduce friction around the next action.

The current visual language is distinctive: black, white, orange, the stair/pyramid mark, oversized condensed display type, and real project imagery. The next pass should improve choice architecture and mobile delivery without diluting that identity.

**REMODELING CONTRACTORS
IN CENTENNIAL, CO**

Keep	Improve
Exact logo and black/orange palette	Serve the hero image as a fast, responsive LCP asset.
Clear local/service headline	Add a secondary 'Request an estimate' action beside Call Now.
High-contrast phone CTA	Make the form promise and next step explicit without inventing response times.
Real project photography	Use captioned case studies rather than galleries without context.
Distinct Placa/Montserrat hierarchy	Reduce the desktop whitespace gap below the header and verify heading wraps on small screens.
Mobile call affordance	Add descriptive title text to the embedded scheduling/map frame.

Conversion instrumentation

Track calls, form starts, form completions, schedule clicks, and service-page source. Use thank-you events and CRM outcomes to distinguish inquiries from qualified jobs. Conversion reporting should remain pending validation until tracking and lead outcomes reconcile.

Make Meza easy to quote, not merely easy to crawl

AI crawlers can access the public site, but citation selection depends on clear answers, original evidence, entity confidence, and authority. Current platform-by-platform citation presence was not verified and should be monitored explicitly.

Pillar	Current state	Next action
Presence	robots.txt does not block the major AI discovery bots checked.	Document bot policy and monitor server logs for GPTBot, ClaudeBot, PerplexityBot, and Google-Extended.
Structure	Several pages use FAQPage schema and long-form service copy.	Lead with 40-70 word direct answers, numbered processes, decision tables, and concise FAQs visible on-page.
Authority	Testimonials, 23-year experience claims, partner logos, and project images exist.	Add named expert reviewers, source-linked credentials, dated projects, and original local data.
Entity	HomeAndConstructionBusiness schema exists, but the business @id is blank and the graph is inconsistent across templates.	Create one stable @id and connect Organization/LocalBusiness, services, people, articles, breadcrumbs, and sameAs references.

Extractable content patterns

Query type	Pattern	Meza example
What is...	One self-contained definition near the top.	Define large-format tile installation and when it needs specialized handling.
How does...	Five to seven numbered, verb-first steps.	Show the Meza tile installation process from substrate review to walkthrough.
X vs Y	Two-column decision table with conditions.	Repair vs replacement; porcelain vs natural stone; grout repair vs regrout.
How much...	Dated cost methodology with ranges only from verified quote data.	Tile floor cost drivers in the Denver metro, updated by year.
Who should...	Credentialed expert guidance and clear limits.	When a shower leak needs a tile specialist vs another trade.

Schema plan

- Fix LocalBusiness @id and use the same graph on all relevant templates.
- Add Organization fields such as primary email, logo, description, and contact methods where verified.
- Use Service/OfferCatalog for true services; add areaServed only for operational markets.
- Add Article or BlogPosting with headline, image, datePublished, dateModified, and named author/reviewer.
- Add BreadcrumbList to service and article templates.
- Keep visible FAQ content when useful, but do not promise FAQ rich results: Google generally limits them to authoritative government and health sites.

Citation monitoring

Weekly: test 10 target questions in ChatGPT search, Perplexity, Google AI Overviews, and Copilot. Log citation presence, cited URL, answer block, competitor sources, and date. Treat changes as volatile observations, not guarantees.

The implementation backlog by URL

This list translates the audit into concrete page work. Owners and dates should be assigned after CMS, hosting, analytics, and Google Business Profile access are confirmed.

URL	Priority	Required change
/	High	Optimize hero/LCP; request recrawl; add secondary CTA; strengthen linked proof.
/tile-installation/	High	Make the Centennial pillar; add process, credentials, case studies, and links to specialties.
/tile-installation-in-denver/	High	Add verified Denver projects, neighborhoods served, local proof, and unique internal links.
/remodeling/bathrooms/	High	Clarify full-scope remodel ownership; add project proof, process, and cost-driver support.
/gallery/	High	Create case-study cards and individual project pages with city, scope, materials, and results.
/category/tile-installation/	High	Noindex/remove from sitemap or rebuild as a unique topic hub.
/feedback/	High	Noindex and remove from sitemap unless it has deliberate search value.
/contact-us/	Medium	Expand meta description; add the consistent business graph and iframe title.
/reviews/	Medium	Use a descriptive local title; source reviews; avoid unsupported self-serving rating markup.
/countertops/	Medium	Clarify materials and workflow; add material pages only for verified offerings.
/remodeling/basements/	Medium	Shorten title; add real basement projects and scope detail.
/blog/	Medium	Add article cards with author/date/topic, canonical category logic, and pillar links.
Cost articles	Medium	Differentiate general vs floor-specific intent or consolidate based on GSC cannibalization evidence.
All commercial pages	Medium	Add named expertise, service schema, updated date, local proof, and tracked CTA.
All article pages	Medium	Add Article, author/reviewer, dateModified, sources, summary block, and next-step link.

Sequence the work so each layer compounds

Technical speed and index control come first. Then strengthen commercial owners, entity consistency, project proof, and answer content. Every release should include crawl, mobile, accessibility, and conversion verification.

Window	Workstream	Deliverables	Verification
Days 0-14	Technical + index	Stage PHP upgrade; fix LCP path; normalize apex links; noindex utility/archive URLs; submit sitemap and request recrawl.	Lighthouse mobile/desktop, 200-status crawl, canonical check, Rich Results Test, Search Console inspection.
Days 15-30	Commercial pages	Refresh homepage, tile pillar, Denver tile page, bathroom remodel, contact, reviews, and gallery architecture.	Desktop/mobile visual QA, form/call events, internal links, schema validation.
Days 31-60	Local + proof	GBP and citation reconciliation; two project case studies; named expert/credential blocks; stable entity graph.	GBP readback, citation log, NAP checks, index coverage, qualified lead review.
Days 61-90	Content + AI visibility	Publish cost and waterproofing guides; natural stone owner if verified; weekly AI citation log; first market expansion decision.	GSC query/page map, citation tests, leads by page, content freshness log.

Release gate for every change

1. Source	2. Build	3. QA	4. Readback
Verify service facts, market, proof, logo, claims, and page owner.	Implement copy, media, metadata, schema, internal links, CTA, and tracking.	Crawl, render desktop/mobile, test keyboard/focus, check console, run Lighthouse and schema tests.	Confirm live URL, canonical, indexability, forms, analytics events, sitemap, and Search Console request.

Definition of done

A recommendation is complete only when the live page is verified, the final crawl is clean, desktop and mobile rendering pass, conversion events fire, the sitemap and canonical are correct, and the change is documented for ongoing ownership.

What success should be measured

- Qualified calls and forms by landing page and market.
- Google Business Profile actions reconciled to real lead outcomes.
- Non-branded impressions, clicks, and average position by page-owner cluster.
- Field LCP, INP, and CLS plus lab regression checks.
- Indexed canonical pages, excluded utility pages, and crawl errors.
- AI citation presence for the 10-question monitoring set.
- Project case-study-assisted conversions and internal path completion.

Evidence you can audit

All website observations were captured on August 28, 2026. Current search results, reviews, hours, software versions, and platform behavior can change; verify owner-controlled systems before publishing claims or editing profiles.

Limitations

- No owner-level Search Console, GA4, call tracking, CRM, Google Business Profile, server logs, or hosting dashboard access was used.
- No traffic, ranking, keyword-volume, conversion, revenue, or review-count estimate was invented.
- Representative web search results are directional and can vary by location, device, account, and time.
- Lighthouse is a single lab snapshot. Field Core Web Vitals and repeated runs should guide final performance decisions.
- Third-party directory data is evidence of inconsistency, not the authoritative business record.
- Recommendations do not promise rankings, traffic, leads, or AI citations.
