Momentum AI — the division, reconsidered

Prepared 2026-09-05 for Dillon, for the Friday 2026-09-11 conversation with Mac. Internal. Every price, hour, capacity figure and support term in here is a **proposal** until recorded as agreed. Nothing implies a contract, an outbound send, or an account change.

One line

Momentum built the machine. Now we build yours.

Momentum has served over a thousand Philadelphia-region small businesses since 2015. In the last six weeks Dillon has shipped, on Momentum's behalf, an attribution spine for Puttery with passing test suites, ten source-checked prospect homepages from one engine, a 26-slide choreographed deck from a brand file, two 4K brand films for 278 credits, and two 16-page AI search audits that both reached the quote stage. The division sells that. Nothing in it is a promise about a capability that has not already run.

The thesis that reconciles ambition with fifteen hours a week

Every offer ships with its agent. Delivery hours per client is an acceptance metric of the offer itself, measured monthly and printed on the scorecard. An AI division whose product is Dillon's hours is not an AI division; it is a consultancy with a chatbot. The September 4 pack's own arithmetic makes the point: a ten-hour delivery week minus three clients' recurring allocation leaves 5.8 setup hours. That number only moves if the agents do the delivery.

Four lanes, because Mac already chose them

Mac put AEO/GEO, AI Design, AI Marketing and AI Automation on the site structure in July and August. The deck already carries an AI slide and an AEO slide. So the division does not rename anything; it puts one launch-ready flagship and one roadmap offer behind each lane, plus one free opener.

Lane	Line	Launch flagship	Proposed	Roadmap
01 AEO / GEO	Get found by AI	AI Search Readiness sprint — fix the AI-crawler, entity and schema blockers proven at Fagan; freeze twenty buyer questions; baseline on two engines; repeat monthly. 90 days.	\$1,500 + \$750/mo	AI Visibility monitoring, \$500/mo

Lane	Line	Launch flagship	Proposed	Roadmap
02 AI Design	Prototype in a week	Spec build — a working site, dashboard or film in five working days from the radar, Puttery and film engines, from real assets and first-party facts.	\$3,500 fixed	Closed-loop site optimization, \$1,000/mo — agentic website optimization
03 AI Marketing	Content that moves	Motion content system — a monthly film and stills set in the client's identity, rights ledger, logo never model-drawn, credits at cost.	\$1,500 + \$1,250/mo	ChatGPT Ads management, \$500/mo (sold once already)
04 AI Automation	The attribution spine	Lead Operations agent — one intake to one destination, dedupe, exception queue, readback, thirty named acceptance cases. The pack's flagship, kept.	\$3,500 + \$1,500/mo	Attribution Spine, \$3,500 + \$1,000/mo — data centralization, the Puttery pattern

Opener, free: the **AI Search Snapshot** — a generated three-to-five page branded audit from one URL. This is exactly what Mac proposed on August 12. It turns the hand-built sixteen-page audit into a repeatable engine Jesse can run.

Dillon's list maps onto this without remainder: *agents* are the flagships' delivery; *AEO/GEO/SEO* is lane one; *agentic data centralization and underlying structure* is the Attribution Spine; *prototypes* is the Spec build; *agentic website optimization* is the closed-loop offer.

The finding Mac asked about

On September 4 Mac asked whether outbound had started and what reporting exists. The answer, reconciled from Gmail SENT on September 3:

241 cold emails
from Dillon's Gmail to Erie and Pittsburgh businesses in
two waves on September 2–3. Two bounces. Two auto-replies.
Zero verified
human replies.
No bounce is not proof of delivery.

In the same fortnight, two hand-built AI search audits (GT Clinic, Tuxedo Den) were sent on August 23 and **both reached the quote stage** — \$900/month and \$1,700–2,000/month respectively, neither yet signed.

The opener that works is the audit. The Snapshot makes it repeatable. And the reporting has to be defined before the next send — sends, replies, quotes, signed, collected, as five separate counts — or the result is not accountable. That is decision D10.

What every price is anchored to

Anchor	Evidence
\$500/mo AEO/GEO add-on, 90 days	Fagan Painting proposal, 2026-08-12; kickoff packet 2026-08-31
\$900/mo quoted after an audit	GT Clinic, revised quote 2026-09-03, unsigned
\$1,700–2,000/mo proposed after an audit	Tuxedo Den, 2026-08-24, no reply verified
\$500/mo ChatGPT Ads lane, signed	Deborah Mara three-lane package, September commission sheet
\$2,500–3,500 technology and reporting build	Puttery NYC recovered proposal
\$1,000/mo floor, \$3,000/mo custom, \$3,000 design package	needmomentum.com/marketing-prices/, captured 2026-09-04
278 credits for two 4K films; 94.5 for a 20s walkthrough	Future City final report; scroll-site manifest

Economics, under the pack's own assumptions

economics_v2.py runs the September 4 pack's economics.py engine with the reconsidered offers. \$75 loaded labour, 10% sales allowance, \$500 fixed, full collection. Not revenue. Not profit.

Scenario	Monthly revenue	Hours	Contribution
One client on each recurring flagship	\$3,500	16	\$1,125
Same, at double hours	\$3,500	32	–\$75
Two clients on each	\$7,000	32	\$2,750
Plus one Spec build in the month	+\$3,500 once	+24	+\$1,250 once

Double hours takes the recurring cohort below zero. That is the whole argument for hours-per-client as an acceptance metric. (My first hand-computed draft of these rows was wrong by \$100; the engine's assertion caught it. The page renders the engine's output, never typed numbers.)

What Dillon decided, and what is Mac's

Dillon's calls, made so the meeting has something to react to: - Lane lines, offer architecture, which four flagships launch. - Visual direction: Momentum Digital tokens, dark-first. Brand blue and accent orange on the deep field, Archivo Black display. The 360 films' *technique* (a photogrammetry fragment, particles that mean something) is borrowed; the 360 palette (cyan, signal yellow) is not — the division's URLs, deck and pricing live on needmomentum.com, and cyan-on-midnight is one step from the neon the anti-slop rules ban. - The lockup: the existing Momentum Digital mark plus the word **AI**. No new logo. Register item D19, because Mac owns the brand. - The demo: the Snapshot generator on Momentum's own domain, plus the existing synthetic lead-ops demo as-is.

Mac's, listed in the register (20 items, all open): every price; the compensation arrangement; protected hours; support coverage names; which accounts; the deck sign-offs; media reuse; IP and exit; credits as pass-through (D20); the name (D19).

What is deliberately not claimed

- No guaranteed citations, rankings, leads or revenue, anywhere.
- No site-count claim. The September 5 selector run is blocked at 3 of 20 source-ready candidates; production is another session's.
- No engine output is scraped. The twenty-question baseline is human-run and recorded.
- No founder likeness in any generated film. No logo ever touches a model.
- No send, post, deploy or contact happens from this kit. Dillon brings it.
